Prompted by the single purpose of satisfying their hatred against an entire class of citizens, without being authorized by any governmental authority, armed men, day and night, break into private dwellings, steal and plunder, and arrest and throw into prison hundreds of unfortunates who have nothing to do with the political struggle and whose only guilt consists in belonging to the class of the burgeoisie, the extermination of which is being preached by the leaders of the communists in their newspapers and their speeches. The distracted families are denied every possibility of finding out where their members are confined; they are refused permission to see the imprisoned or to bring them needed food.

Such acts of terrorism on the part of men who boast that they want to bring about the happiness of the entire human race are incomprehensible, and they arouse the indignation of the entire civilized world, which is now learning about the events at Petrograd.

The diplomatic corps has deemed it necessary to convey its indignation to the People's Commissary, Zinovieff. It protests energetically against the arbitrary acts occurring every day. The representatives of the neutral Governments reserve for their Governments the right to demand of the persons guilty of these arbitrary acts the needed satisfaction and personal legal responsibility.

The diplomatic corps requests that this note be brought to the attention of the Soviet Government.

Petrograd, September 5, 1918.
(Signed) E. ODIER, The Swiss Ambassador,
President of the Diplomatic Corps in Russia.

The Soviet Government's Answer.

To the Representatives of the Capitalist Neutral Powers:

The note handed to us by the representatives of the neutral powers on September 5 constitutes an act of gross interference in the internal affairs of Russia. The Soviet Government might leave this act without any answer whatever. But the Soviet Government utilizes with pleasure every opportunity to make clear to the popular masses of all countries the nature of its policies, for the reason that it is the representative not only of the working class of Russia but of the entire exploited human race. The People's Commissary for Foreign Affairs therefore gives its answer regarding the matter in question.

The neutral powers endeavor to give a description of the condition of the suppressed bourgeoisie of Russia that is calculated to arouse the deepest sympathy in the hearts of the bourgeoisie of the entire world. It is not our purpose to refute the inventions of the representatives of the neutral powers, who, in their note, repeat every slander brought by the Russian bourgeoisie against the Red Army. We need not refute a single allegation about a concrete case of arbitrariness, first, because the representatives of the neutral powers do not quote a single concrete case, and, second, because in every war—and we find ourselves in a condition of civil war—there will happen misdeeds of individuals.

The representatives of the neutral powers do not protest against scattered misdeeds on the part of irresponsible persons, but against the régime enacted by the workers' and peasants' Government in its struggle against the class of exploiters.

Before we explain why the workers' and peasants' Government applies the red terror, against which the representatives of the neutral powers protest in the name of humanity and because of

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Dec. 2, 1918.
Regular weekly meeting came to order at 7 p. m., E. A. Erickson presiding. Secretary reported shipping medium. Nomination for officers for the ensuing term was proceeded with.
Omitted from synopsis of previous meeting—Wm. Hardy, Agent at Vancouver, B. C., tendered his resignation and W. G. Millard was elected to fill the unexpired term.

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., Nov. 25, 1918.
No meeting. Shipping slow; men scarce.
J. ETCHELLS, Agent.
Room 11, de Cosmos Block, 1424 Government St.

Vancouver, B. C., Nov. 25, 1918.
Shipping fair.
WM. HARDY, Agent.
58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, Nov. 25, 1918.
No meeting. Shipping and prospects fair.
H. L. PETTERSON, Agent.
2016 North 30th St. Tel. Main 808.

Seattle Agency, Nov. 25, 1918.
Shipping medium.
P. B. GILL, Agent.
84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, Nov. 25, 1918.
Shipping fair; few members around.
ED. ROSENBERG, Agent.
P. O. Box 280. Tel. Main 557.

Portland Agency, Nov. 25, 1918.
Shipping medium; prospects fair.
JACK ROSEN, Agent.
88½ Third Street. Tel. Main 6013.

San Pedro Agency, Nov. 25, 1918.
Shipping good; members scarce.
HARRY OHLSON, Agent.
128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, Nov. 18, 1918.
Shipping good; prospects fair.
R. H. BLACKWOOD, Agent.

DIED.

Ernest G. Persson, No. 539, a native of Sweden, age 42. Died at Seattle, Wash., Nov. 8, 1918.

Rauder Henriksen, No. 2830, a native of Norway, age 31. Died at Seattle, Wash., Nov. 22, 1918.

Edward Beahan, No. 1818, a native of California, age 39. Died at San Francisco, Cal., Nov. 26, 1918.

The West Coast Shipbuilding Co., Vancouver, Wash., announce they will construct seven concrete river steamers 130 feet long by 12 feet to be completed within from eight to twelve months. These vessels will be built at the Naull shipyard and have no connection with similar operations promised at New Bern by the West Coast Co.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Andrew Furuseth, President of the International Seamen's Union of America, has sailed for Europe to organize the world-wide protest of seamen against the proposed sacrifice of the Seamen's Act. He will be on guard over the Magna Charta of the sailors at Versailles when the peace congress is in session there. If there has been any doubt in the minds of American shipowners as to whether their attempt to kill the Seamen's Act would fail, that doubt may now be dropped.

When the new International Union of Seamen was formed by delegates from the seamen's unions of England, Holland, Denmark, Norway and Sweden, at Copenhagen last June, the conference went on record for the equalization of the wages of seamen in Europe. That action represented the desire of the seamen from the ports paying the least wages to secure laws that would permit them to get the benefit of the highest wage paid in any European port.

When Chairman Hurley of the United States Shipping Board, formerly president of the Illinois Manufacturers' Association, was sailing for Europe a few days ago, he announced that he was going abroad to secure through the peace congress an "equalization and stabilization" of the wages of seamen, as between this country and Europe.

As the American seaman now has a far higher level of wages than is paid in the average port of Europe, Hurley's proposal means simply that he is going to try to destroy the Seamen's Act by lowering the American standard of wages, abolishing the freedom of the seamen to quit their jobs when in port in order to get better jobs, and in effect wiping out the emancipation of the seamen at the very moment of the triumph of the war for worldwide democracy.

In a letter to President Wilson, Furuseth points out that the act, if enforced, will itself equalize wages, and through its language clause will save the sea-power of the world to the white race. He says that the British and German delegates at the London conference on safety at sea, five years ago, fully understood that the freedom for seamen proposed in the act would equalize wage cost, and would thus make the United States a dangerous rival on the ocean.

"The effort was then to prevent the bill from becoming a law," he says. "The effort at the coming peace conference will be to nullify this law. There are comparatively few men high enough in public life to be considered as possible peace commissioners. There are still fewer of those who understand the economic aspect of this law and who can therefore see its national aspect. The most astute appeals to class interests will be used to disguise the national interests behind the efforts made, and the commissioners ought to be specifically instructed on this subject. Moreover, there ought to be some among them who can see and understand. Such men are known to you."

President Wilson understands, and amid a thousand other cares while at the peace congress he will try to watch over the interests of American seamen and European seamen, and the new American merchant marine. Furuseth is going to be near at hand, watching the game for the seamen of America. He will probably be assisted by the almost unanimous vote of the rank and file of the seamen of Europe. They don't want American standards lowered; they want European standards raised to the level set by the American law.

"Seven centuries in the abyss of slavery; three years of God's free air; then back to the abyss!" Furuseth describes the situation.

Only—they are not going back.

Mr. Hurley sails dangerous uncharted seas.

* * *

Our national capital shivers every morning when it reads its newspapers. It shivers again in the afternoon, when the evening editions appear. Its fright is due to that wave of social revolution in Europe, echoed in threats of labor troubles at home. Everybody points an accusing finger at everyone less reactionary than himself and yells "Bolshevik!"

This sudden upthrust of the Mooney case through the floor of polite society has just set them off again. The re-election of Stephens as Governor of California was generally received here as a guaranty that Tom Mooney would be hanged, and "Labor would learn something." Now come the Central Labor Councils in Seattle and Norfolk and New York City and a lot of places in between, talking of a general strike if Stephens does not give Mooney a new and fair trial. And Samuel Gompers, yesterday lauded in every respectably reactionary editorial column from coast to coast, joins the deep chorus of declaration that "Mooney shall not hang." It is quite too much for our upper-class press. They are going to call Gompers a Bolshevik too!

It isn't Mooney's life that worries them now; it is the fact that the American labor movement has reached the point where it takes action in its own right, to prevent gross injustice by the courts. These reactionaries see that when the times are a bit less flush—when the returned soldiers and the returned war workers have filled all of the best jobs, and one or two millions of them are impatiently waiting for good jobs such as were handed out to the first comers—the vast, irresistible power of the labor movement may be used to speed up the action of Congress. That was done some years before the war by the British coal miners, and our own railroad brotherhoods came near using the same method in the matter of their eight-hour day.

So our investment bankers and their lawyers and diplomats and writers don't sleep well, these nights. They are passing around town this story which adds to their thrills:

A wounded soldier, weak but determined to start again to earn a livelihood for his family, applied for a job at the factory he had left to go to France. The boss tried to tell him he was not needed. The soldier looked the boss in the eye and told him that he had better give him a job right away. He said he had "gone through hell" in the war, for his own country, and he was not forgetting that the country was his; he was entitled to a job.

The boss became uneasy, and told him he would fix it up; there was a watchman's job that could be turned over to him.

There was a dangerous glint in the eye of the soldier after he heard that offer. He began to tell the boss what he thought of it, and without mincing words. Then he told the boss that unless he gave him at once a better job than the one he left when he marched out to war, every one in that factory and every one in the community would hear the story without delay.

The boss, very much frightened, gave him the better job, and implored him to keep still. The incident was reported to the War Department, and caused certain old gentlemen in high positions there to exclaim something about "bolshevikism."

* * *

Despite the fact that the President and his cabinet have agreed that the War Labor Board's work must go on, during the whole period of national demobilization and reconstruction, Chairman Frank P. Walsh has resigned. He states that he is compelled to return to the practice of law. He has made a big financial sacrifice in holding the job and doing the work he has done on the War Labor Board, and he needs a chance to earn something to maintain his family for the coming year. Probably he will represent some of the biggest of the trade unions in their legal troubles in the future. In any case, Walsh will not for a moment lose touch with the labor movement in which he has come to commanding influence.

If we may judge from the fact that the five employer members and Mr. Taft voted against Walsh and the five labor members, the other day, on a motion by Walsh to cut the red tape that holds back awards in several hundred industrial disputes, then Walsh has a very good excuse for resigning—the employers in the board are sabotaging. They have prevented the board from settling disputes. Walsh has never discussed the internal troubles of the board, but the hundreds of complainants coming to the board for justice know that somebody is holding back. It has not been the labor end of the board.

The board will go on, but it is likely that its personnel will be changed if a big crop of strikes is not to be raised this winter.

One of the last decisions rendered is the taking of jurisdiction in the Minneapolis Steel and Machinery Company case. The joint chairman decided yesterday that the board will not permit the Minneapolis Public Safety Commission to interfere. Examiners are going to Minneapolis to hold hearings on the complaint that machinists were discharged for having joined the union.

MERCHANT SHIPS FOR BRAZIL.

At a recent meeting of the Associacao Commercial do Rio de Janeiro the following resolution was adopted and transmitted to the President of Brazil: "Whereas there is a great deficiency in the merchant marine of Brazil, which has hindered the development of exports, and which has prevented the extension of industrial and agricultural progress; and whereas the great Republic of the United States of America, again showing its practicability through its people, is solving this important problem for itself by its recent program of building wooden ships in large numbers, which are giving inestimable aid to its commerce. Be it Resolved, That representations be made to the Brazilian Government to suggest the necessity of the construction of wooden ships, following the example of the United States."

Speaking literally as well as figuratively, child labor is child murder.

DANGER AHEAD!

(Editor's Note—The following thoughtful protest against the permanent establishment of universal military training and service was written for the American Union Against Militarism by Ex-Governor Simeon E. Baldwin of Connecticut):

In my judgment, any permanent system of universal military training and conscription would be unsuited both to the political and the social conditions existing in the United States.

We have made our President an officer of immense powers. They are great in peace; overwhelming in war. In framing our Constitution this policy was deliberately adopted. With States scattered over half a continent it was a vital necessity to have something like absolute authority in certain matters vested in a single executive magistrate. He must, in the nature of things, see that the laws of the United States are properly executed, whether by the people in general or any particular class of the people. The only recognized class is that engaged in the military and naval service. It is the President's right and duty to carry out the legislation of Congress in regard to it. Against the danger of his abusing this trust the only safeguard is impeachment. Against the danger of bad legislation by Congress there is the greater and self-executing safeguard of a constitutional provision that no appropriation of money for raising and supporting armies shall be for a longer term than two years.

The design of the framers of the Constitution was to have only a small standing army, but that it should be supported by a force of militia in each State, trained under a discipline prescribed by Congress. The necessities of the war of 1914-1918 have caused the virtual abolition of the State militia. Instead of it we have adopted, for the time being, the policy of conscription. The course of events has now brought us to the point where we must determine whether to perpetuate or to abandon it as a part of the American system of political government.

Our history since the Constitution was adopted shows that its framers were right in providing for a small army and a supplementary militia, only, in time of peace; leaving conscription to be resorted to only when necessary in time of war.

We shall never wage wars avowedly for conquest. For any others we can safely trust to voluntary enlistment in the armies and navies of the United States, and the State militia; to be supplemented, in case of invasion or danger of invasion, by a temporary Conscription Act.

We have become the greatest and richest Government on earth. Canning's statement, a century ago, that England had called upon the New World to redress the balance of the Old, if but half true then, has since been acted out in the wars just closed. We have had a main share, cooperating again with England, in shaping the events that have, in these wars, remade the face of Europe. Our success now becomes our danger. Power begets a constant temptation to use it. Power to dictate to other nations their course of conduct leads to a desire to exercise and enforce that power. Any Conscription Act tends to exalt the military and depress the civil authority. Safety for us does not lie that way.

HONOLULU'S HARBOR.

Now that the shipyards of the United States are rapidly reaching a monthly tonnage output that will measure up with early estimates, the next pressing requisite for the success of an American merchant marine is ample dockage. New York proposes to expend $20,000,000 at once upon harbor and dock improvements. Philadelphia and Baltimore have already accomplished a great deal toward making provision for the accommodation of shipping after the war. Boston's docking accommotions will be greatly increased in the near future. In fact, along the Atlantic and Gulf coasts of the country, as well as along the Pacific, the matter of preparing for the inevitable revival of ocean commerce is at the present time receiving earnest attention.

The United States Emergency Fleet Corporation is giving consideration to all harbor improvements and projects. Along with other things, it recognizes the great need of better dock facilities at Honolulu, Hawaii, and, it appears in connection with action recently taken by the Honolulu Chamber of Commerce, in giving indorsement to a $9,000,000 harbor plan, the Fleet Corporation is very desirous that the proposed improvements shall be made without delay.

Through the Hawaiian delegate, J. K. Kalanianaole, J. H. Rosseter, chief of operations of the Emergency Fleet Corporation, has informed the Honolulu Chamber of Commerce of the principal features of the program. From this it appears that while it will be well to acquaint Congress with the plans, the approval of that body will not be required, so that there should be no delay, either in proceeding with or in prosecuting the work. The dredging of Kalihi channel, adjoining Honolulu Harbor, will cost approximately $2,715,000; concrete wharves will cost $5,578,000, and the warehouses and other structures to be erected will consume the balance of the $9,000,000, and perhaps call for an increase in the allowance. The improvements, which will be mainly on Sand Island, at the entrance to Honolulu Harbor, will cover at least eleven acres, and when the docks are completed there will be accommodation for from twenty to twenty-five steamships of an average length of 500 feet. The title to this island is vested in the United States Government; it is anticipated that, as a result of dredging, several thousand square yards will be added to its available area.

The importance of Honolulu as a stopping place between the United States and the Philippines, or as a sort of half-way station between North America and the Orient, can hardly be exaggerated. The need of better harbor and dock facilities has long been felt on the islands and has long been recognized on the mainland. It is encouraging to learn now that this need is to be supplied, with a minimum of either legislative or administrative delay.

The union label on an article you purchase is the only assurance you can have that it is produced by union labor. Protect yourself and your union conditions by buying nothing to which it is not attached.

EXPENSIVE INEFFICIENCY.

The Wall Street Journal says that thousands of dollars are being lost annually by oil companies, particularly those operating in Mexico where the gushers are extremely powerful, because of the inability to hold in the oil after the well has been drilled. The 20,000-barrel well of the New England Fuel Co. recently broke loose and ran amuck for sixteen days before it was finally shut in. The oil which escaped covered fifteen acres, at a depth of three and one-half feet. So great was the flow that it was necessary to build many levees in order to keep the waste oil from running over the highway and into the Panuco River, which lies a short distance from the well. Considerable money was expended for the levees which were built around about 30 acres. This operation alone necessitated the use of several hundred teams and scrapers.

If men would adhere strictly to the sound rules of practice in trade unionism, as they do to the rules of arithmetic, we should witness fewer instances of division and subtraction under the guise of addition.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER

(Continued from Page 3.)

of the things which you represent, could not have been enhanced."

If the President accepts the resignation William Harman Black, alternate for Mr. Walsh, automatically becomes joint chairman of the board, unless other arrangements are made. Mr. Black is a New York attorney.

Prior to Mr. Walsh's letter the board informed Secretary of Labor Wilson that they were anxious to return to their private affairs, but that they would be guided by the President's wishes. Secretary Wilson was requested "to bring this matter to the attention of the President in order that the board may be informed of his wishes in the premises."

It is stated that cases pending before the board in which the awards will have retroactive effect number more than 100. There are some 300 cases in which hearings have not begun.

Thick-Neck Employers Cause Tragedy.

The worst traffic tragedy in local history is the price paid for the Brooklyn Rapid Transit Company's persecution of trade union employees and its refusal to accept a decision by the National War Labor Board, which ordered the company to reinstate twenty-nine members of the Brotherhood of Locomotive Engineers. Instead of obeying the order company officials questioned the board's jurisdiction on the ground that "the discharged complainants were admittedly not in the company's employ," and referred the matter to the trustees of the B. R. T. Employees' Association, a company-controlled organization.

To maintain their rights and to check victimization the employees suspended work and the company ordered a train dispatcher to take out a train of five cars crowded with 900 passengers. On rounding a curve at a high rate of speed the operator lost control of the train and it jumped the track, killing 100 and injuring approximately the same number. The wooden cars—operated by the company in defiance of orders by the Public Service Commission—burst into flames, adding to the number of killed and injured.

The guilt of the company for this holocaust was so evident that its defenders and apologists remained silent against a city-wide indignation and the management quickly complied with the National War Labor Board's order by reinstating the discharged employees with full seniority rights and the strike was declared off.

The company also agrees to enter into an agreement with the committee representing these workers. Heretofore the company has attempted to force its controlled "union" on employees.

Workers' Problems for Public Schools.

Labor problems are to be brought before school children this winter by the United State Bureau of Education, which is issuing a series of pamphlet courses for the schools. Among the pamphlets are such subjects as "War Labor Administration," "Employment Agencies," "Employment Management," "The Worker in Our Society," "Women in Industry," "Child Labor" and "The Human Resources of a Community."

The lessons for the upper classes in the high schools discuss topics more advanced than those for lower high school and upper-graded school pupils, while still more elementary subjects are provided for the intermediate grades of the grammar schools.

In the high school lesson on the worker and the wage system is discussed the rise of the wage system, which is shown to be of comparatively modern development, with its result—leaving the worker dependent on the employer for hire in a speculative society.

The classes of risks that employes are subject to are described, with their consequences in the way of insecurity for the worker. The influence of accidents, disease and fatigue, and the weak bargaining position of the workmen, are presented.

The aim of the lesson is to stimulate constructive thought on the problems of the wage worker.

THE "RED TERROR" IN RUSSIA.

(Continued from Page 2.)

which they threaten us with the indignation of the entire civilized world, we shall take the liberty of asking them a few questions.

Is it known to the representatives of the neutral powers that, already in its fifth year, there rages an international war into which a little clique of bankers, generals, and bureaucrats has pushed the masses of the people of the entire world; that the masses of the people are mutually destroying themselves and are cutting each others' throats so that the capitalists may profit billions? Is it known to them that in this war not only have millions of human beings been killed at the front, but that both warring parties have bombed open cities and have killed unarmed women and children? Is it known to them that in this war one of the warring parties has sentenced millions of human beings to death by starvation in that, contrary to international law, it has cut off the supply of bread, hoping that, by means of the starvation of children, it can force upon the other party an unconditional surrender? Is it known to them that the warring parties take as prisoners hundreds of thousands of unarmed peaceful citizens, putting them to forced labor far from hearth and home and taking from them every right of redress? Is it known to them that in all warring countries the ruling capitalist clique has robbed the masses of the people of the right of assembly, of the freedom of the press, and of the right to strike, and that, for even the faintest attempt at protest against the white terror of the bourgeoisie, the workers are sent to jail or are sent to the front in order to kill within them every thought of their human rights?

All these pictures of the extirpation of the working class in the name of capitalist interests, all these pictures of the white terror of the bourgeoisie, are more than well-known to the Governments of the neutral powers and to their representatives in Russia. And yet, they have either forgotten the higher ideals of "humanity," or they forgot, in this case, to remind the bourgeoisie of the warring countries, dripping with the blood of the masses of the people, of these ideals.

The so-called neutral countries did not dare to protest, with so much as a single word, against the white terror of capital; aye, they did not even wish to protest, because the bourgeoisie of all neutral countries aided the capitalists of the warring countries to continue the war for the reason that they made billions by furnishing war material to both imperialist camps.

We shall permit ourselves to ask still another question: Have the representatives of the neutral powers ever heard anything about the bloody suppression of the Sinn Feiners in Dublin? About the shooting, without court order, of hundreds of Irishmen, including Skeffington? Have they ever heard of the white terror in Finland, of the tens of thousands shot, of the tens of thousands of workingmen rotting in jails, of their wives and children, none of whom were ever charged with anything or ever will be? Have they not heard of the mass executions of workers and peasants in the Ukraine? Of the mass shootings of workingmen by the brave Czecho-Slovaks, these hirelings of French-English capital? The Governments of the so-called neutral countries heard of all this, but never did the thought occur to them to protest against these arbitrary acts of the bourgeoisie in suppressing the working class movement, because they themselves are ready at any moment to shoot the workers battling for their rights, and in their own countries they are ready, in the name and for the defense of the interests of the bourgeoisie, to suppress the slightest sign of the rising of an indignant working class.

It is sufficient to remind oneself of the recent suppression by military force of labor demonstrations in Denmark, in Norway, in Holland, in Switzerland, etc. Not yet have the workers of Switzerland, Holland and Denmark risen, but already do the Governments of these countries mobilize the military forces against the slightest movement of protest on the part of the workers. When the representatives of the neutral countries threaten us with the indignation of the civilized world, and protest against the red terror in the name of humanity, then we call their attention to the fact that they have not been sent to Russia to defend the principles of humanity, but to take care of the interests of capitalist states; and we advise them not to threaten us with the indignation of the civilized world that is dripping from head to foot with the blood of the workers, but themselves to tremble before the wrath of the masses of the people of the entire world who will rise against a "civilization" which has plunged the whole human race into the unspeakable misery of a butchery without end.

In the entire capitalist world rules the white terror against the working class. The working class of Russia has put an end to Czarism, whose bloody régime never called forth the protests of the neutral countries. The working classes of Russia have put an end to the rule of the bourgeoisie which, under the banner of the revolution and with the silent consent of the neutral countries, massacred the soldiers because they were no longer willing to shed their blood for the benefit of war speculators, massacred the peasants because they declared the soil to be their property—the land they had tilled for hundreds of years and had watered with their sweat.

The majority of the Russian people, as represented in the second congress of the workers, peasants, soldiers, and Cossack deputies, placed the governmental power in the hands of the workers and peasants. A handful of capitalists who desired to repossess themselves of the factories and banks taken from them on behalf of the people; a handful of landowners who want to take again from the peasants the land they now hold; a handful of generals who again want to teach docility to the workers and peasants with a whip—have refused to recognize the decision of the Russian people. With the money of foreign capitalists, they have mobilized counter-revolutionary bandits, by whose aid they cut Russia off from bread so that the bony hand of hunger may strangle the Russian revolution. Having convinced themselves of the impossibility of overthrowing the workers' government supported by the masses of the workers, they organized counter-revolutionary riots in order to prevent the workers' and peasants' Government from pursuing its constructive work, in order to prevent it from freeing the country from the anarchy into which the criminal policy of former Governments has plunged it. They have betrayed Russia in the North, in the South, and in the East to foreign imperialist states by calling foreign bayonets from wherever they could get them. Hidden behind a forest of foreign bayonets, they send hired assassins to destroy the leaders of the working class in whom not only the proletariat of Russia but the entire human race sees the personification of its hopes. The Russian working people will crush mercilessly this counter-revolutionary clique which, with the aid of foreign capital and the Russian bourgeoisie, wants once more to put the slave's noose around the neck of the Russian people.

We declare to the proletariat of the entire world that neither hypocritical protests nor specious pleas will protect from punishment those who, on behalf of capital, rise in arms against the workers and the poor peasants, and who would again starve them and entangle them in new wars in the interest of capitalism. We assure equal rights and equal freedom to all those who loyally fulfill their duty as citizens of the Socialist workers' and peasants' republic. To those we bring peace, but to our enemies we bring merciless war. We are convinced that the masses of the people of all countries, suppressed and tortured by a mere handful of exploiters, will understand that in Russia force is used only in the name of the sacred cause of the liberation of the masses of the people; we are convinced that not only will they understand but that they will also follow us.

We reject, emphatically, interference on the part of neutral capitalist powers in behalf of the Russian bourgeoisie, and declare that any attempt on the part of the representatives of these powers to go beyond the boundaries of the lawful protection of their own nationals will be regarded as an attempt to give support to the Russian counter-revolution.

People's Commissary of Foreign Affairs.
G. W. TSCHITSCHERIN.

The War Trade Board announces in a new ruling (W. T. B. R. 300) that hereafter all vessels flying the American flag and vessels chartered to the United States or to citizens of the United States clearing from ports of the United States for the Philippine Islands which are to return direct to the United States, must utilize all tank cargo space aboard the vessel on the return voyage for vegetable oil only; and that said oil must be carried in accordance with the rules promulgated by the Governor General of the Philippine Islands. This requirement will be made a condition in the granting of bunker licenses.

JAPANESE IMPERIALISM.

Professor Paul Seippel, of Zürich, writing in the Journal de Genève (September 30), expresses the opinion that Japanese imperialism will hinder the formation of a league of nations and require the Anglo-Saxon nations to continue to maintain their navies.

Japan is the antithesis of the United States. Its people is strictly realistic. In politics, the moral idea does not exist for Japan, any more than it does for Prussia. What distinguishes it from Prussia is its refined civilization, and the fact that up to now it has made a point of respecting its international engagements. We can therefore give it our confidence for the time being. But the Japanese would still keep their plans of conquest, even if the Europeans gave up theirs. This war does not convey any lesson to them; they perceive in it no moral significance. "In the European conflicts," says M. Bellessort, "they see only the violent collision of national interests, and distrust ideas of right and justice." Their newspapers betray complete indifference concerning our discussions on the society of nations. Even if, as we firmly hope, German imperialism is overthrown and reduced to impotence, there will still remain in the Far East another imperialism, which will be the greatest obstacle to the disarmament demanded by all the peoples of Europe as the sole means of escaping absolute ruin. To keep in awe this ally of to-day, who may become the obstructive rival of to-morrow, the Anglo-Saxon nations will assuredly be obliged to retain, at the very least, a sufficient naval armament.

FIFTH LIBERTY LOAN COMING.

Secretary of the Treasury McAdoo has announced that, no matter what the results of the pending peace negotiations may be, there will be another Liberty loan. To use his expression, "We are going to have to finance peace for a while just as we have had to finance war."

There are over 2,000,000 United States soldiers abroad. If we transport these men back to the United States at the rate of 300,000 a month, it will be over half a year before they are all returned. Our Army, therefore, must be maintained, victualed, and clothed for many months after peace is an actuality.

The American people, therefore, having supported the Liberty loan with a patriotism that future historians will love to extol, will have an opportunity to show the same patriotism in financing the just and conclusive victorious peace whenever it comes.

Not for a moment, however, is the Treasury acting on any assumption that peace is to come soon. Until peace is actually assured the attitude of the Treasury and the attitude of the whole United States Government is for the most vigorous prosecution of the war, and the motto of force against Germany without stint or limit will be acted up to until peace is an absolute accomplished fact.

One more Liberty loan, at least, is certain. The fourth loan was popularly called the "Fighting Loan"; the next loan may be a fighting loan, too, or it may be a peace loan. Whatever the conditions, the loan must be prepared for and its success rendered certain and absolute. Begin now to prepare to support it.

ANCIENT SHIPS AND SAILORS.

C. W. Cuthell, General Counsel United States Shipping Board Emergency Fleet Corporation, not only knows his Blackstone and something about the ships that Mr. Hurley and Mr. Schwab are building (at least the legal end of them), but he also has a speaking acquaintance with the Biblical historians, and he discovered some interesting facts about the emergency shipbuilding program which was brought about by the great deluge and subsequently developed more or less of a merchant marine in the succeeding several centuries.

From the sixth chapter of Genesis, verses 14, 15, 16, Mr. Cuthell culls information that the ark was 300 cubits or 450 feet long, 50 cubits or 75 feet in breadth and 30 cubits or 45 feet in height.

It had three decks or "stories," "lower, second and third."

It was made of gopher wood and was "pitched" "within and without with pitch."

It had one window and one door.

The ark was built in B. C. 2448, or 4366 years ago, according to Archbishop of Ussher, or in B. C. 3155, according to Hales.

"Ships" are first mentioned in 49 Genesis, 13, in which Jacob assigns to his son Zebulon his territory, "Zebulon shall dwell at the haven of the sea; and he shall be for an haven of ships; and his border shall be unto Zidon" (east coast of Mediterranean). Apparently the first Port and Terminal Facilities Commission (B. C. 1689).

Solomon is the first shipbuilder specifically named as such in 1 Kings, 10, 26, "And King Solomon made a navy of ships in Eziongeber which is beside Eloth on the shore of the Red Sea, in the land of Edom." (The forerunner of the Emergency Fleet Corporation.) 1 Kings, 27, "And Hiram sent in the navy his servants, shipmen that had knowledge of the sea with the servants of Solomon." (The ancestors of the Division of Operations.) (B. C. 992.)

Evidently a regular passenger service was maintained in Jonah's time from Joppa to Tarshish (Jonah 1, 3). When the Lord gave Jonah the unpleasant job of crying against Amech, he "went down to Joppa and he found a ship going to Tarshish; so he paid the fair thereof and went down into it to go with them unto Tarshish from the presence of the Lord." (B. C. 862.)

"Jehosaphat made ships of Tarshish to go to Ophir for gold, but they went not, for the ships were broken at Erziongeber." 1 Kings 22, 48. (B. C. 897.)

"Naphtali is a hind let loose; he giveth goodly words." 49 Genesis, 21.

The United States granted the first patent of the present series eighty-two years ago. Patent No. 1, issued on July 13, 1836, was for a device to keep car wheels from slipping. Several years ago the millionth patent was issued, on a pneumatic tire. The constant demand for better transit facilities is responsible for the largest proportion of patents. Flying machines at the present time are the particular object of inventors' minds, and scarcely a day passes without an application covering some novel type of machine for navigating the air.

Labor News

Increases in express rates amounting to about 10 per cent. will shortly be made by the American Railway Express Company to raise $24,000,000, half of which is to go to the men in higher wages, and half to the railroads for transportation.

Mothers' pensions were indorsed by Henry J. Gideon, chief of the Bureau of Compulsory Education, in a speech at Philadelphia. "If the mother," he said, "must depend upon her children for suport, and the law says they shall go to school, the State should provide her with an income to secure food and clothing."

Herbert Crawford, International Association of Machinists' organizer, was taken from his hotel in Jackson, Mich., and tarred and feathered. The mob was led by a uniformed sergeant of the Michigan State Constabulary. The mob also broke into the room of a traveling man, who was assaulted somewhat less severely. The reason for this is that the mob thought they had hold of another machinists' organizer. Crawford was engaged in organizing at the time. The local daily press gave the incident small attention.

The Chicago Federation of Labor has submitted to its affiliates a plan to organize a labor party. If the plan is indorsed a convention will be called and a ward and precinct organization campaign started. The platform presented includes full recognition of trade unions, Government ownership of natural resources, tax on land values, the eight-hour day, equal pay regardless of sex, league of nations, labor representation at the peace conference, opposition to child labor, representation of labor in proportion to its voting strength in all Government departments and upon all Government boards of demobilization.

An investigation by the Children's Bureau, Department of Labor, shows that very young children were employed in vegetable canneries during the past season and many of them escaped all school laws. Children from 7 to 16 years old were found employed a large part of the year at irregular hours and usually living in unsanitary and crowded camps. The children were employed in the various processes of canning, including peeling tomatoes and husking corn. Those too small to reach the tables stood on boxes placed on wet, slippery floors. In 270 canneries in Maryland and Virginia, 1094 children under fourteen years were found at work.

Wage increases have been granted railroad telegraphers by Director General of Railroads McAdoo. A flat minimum of 35 cents an hour was established and to this was added 13 cents an hour with time and one-half for over eight hours. Wages paid January 1 last were used as a basis upon which to compute the award. The new rates date back to October 1. The award is a compromise with rates urged by the Order of Railroad Telegraphers. The workers affected are telegraphers, telephone operators (other than switchboard operators) agent-telegraphers, agent-telephone operators, tower men, lever men, train dispatchers, tower directors, block operators and staff men.

"Many a man would be proud to stand in your shoes."

"I don't doubt it," replied Senator Sorghum. "Politics out my way got so fierce for a while and leather was so expensive that a man might expect to lose his shoes almost as easily as his reputation."—Washington Star.

"Yes," said the W. A. A. C., "I come from a very good family. We have a crest—two peacocks rampant on a field of azure blue."

"Really," said the soldier.

"Well, I come from a jolly good crowd, too! Yes, and we've got a crest—two sergeant-majors rampant on a field of 'as you were'!"—Tit-Bits.

INFORMATION WANTED.

An appeal has been taken by the owners of the Bark "Portugal" from the decision of the Federal District Court in the matter of salvage award of $30,000 recently made and referred to in these columns. The determination of this appeal may be a matter of six months. Seamen who wish to get their money as soon as possible should communicate with Silas B. Axtell, Attorney, One Broadway, New York, in order that I may send them a power of attorney form to be signed, which will be required by the court before the money can be paid out. The crew, of course, are sure to get some money and they will probably get their portion of the amount awarded by the lower court. It seems quite possible that the decision of the lower court will be affirmed. 7-24-18

One B. Kajakcorchi, oiler, of Russian nativity and member of Seamen's Union, was injured on the steamer "Paraiso," of Swayne & Hoyt, San Francisco. The vessel was one day out of New York and on the second watch the strap on the go ahead starboard eccentric broke, with the result that Kajakcorchi had his left hand smashed all to pieces. He has been in the hospital ever since and will be disabled for many months. He has a permanent disability. Patrick Ennis and Andrew McCann, who know about the previous condition of this strap, will oblige me by communicating with me or the nearest Union delegate. This strap, we have reason to believe, was worn out and defective, as it had been heating up continuously for nearly three weeks prior to the accident. Silas B. Axtell, Esq., 1 Broadway, New York City. 8-21-18

Members of the crew of the S. S. "Argonaut," who assisted in the salvage services to the S. S. "Jason," at the time she was in distress off the coast of Florida, on or about January 1st, 1918, will kindly call or communicate with the undersigned who is representing most of the officers and crew of the S. S. "Argonaut." Silas B. Axtell, One Broadway, New York City. 7-24-18

You Want the Truth
This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.
LA FOLLETTE'S MAGAZINE
will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.
Send in your order today.

INFORMATION WANTED.

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City. 6-5-18

Members of the crew of the steamer "Brazos" who were on board when she picked up the S. S. "Iroquois" can obtain money due them for such salvage services by communicating with Silas B. Axtell, attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 7-31-18

Hans Herman Hansen, a native of Bornholm, Denmark, about 30 years of age, last seen at San Francisco, Cal., in 1914, is inquired for. Any one knowing his whereabouts please notify his sister, Mrs. Marcher; address, Modesto, Cal. 3-20-18

Home News

The Japanese Association of Los Angeles announces 15,320 Japanese in its district, 4446 of whom are women. The number in Los Angeles is 10,009, the remainder being scattered through nineteen counties. They own 2792 acres of land, and lease 40,743 acres.

The second trial of the editors of "The Masses," a radical periodical which suspended publication some months ago, has ended in another disagreement. Press reports declared that the vote of the jury was eight to four for acquittal. It is expected that the case will now be dropped. The indictment was brought under the espionage act, and was against Max Eastman, editor; Art Young, John Reed, Merrill Rogers, H. J. Glintenkamp and the Masses Publishing Company.

Emporia (Kansas) is attempting to eliminate charity by putting its poor on a self-supporting basis. All vacant land in the city was leased by a central welfare bureau, which assigned to each family receiving assistance the winter before, enough land to provide vegetables for the coming winter. Wood and coal yards have been established where men can work, receiving part pay in fuel and part in cash. The experiment is watched with interest by neighboring towns.

The Rev. Charles Stelzle has been invited by the American Red Cross to become director of the Bureau of Relations with Churches and Religious Organizations, and of the Bureau of Relations with Labor Organizations, in connection with its Publicity Department. The Administrative Committee of the Federal Council of the Churches of Christ in America has released Mr. Stelzle for this purpose, and he has already gone to Washington to undertake the work for the period of the war.

The coroner's jury which held an inquest into the death of one of the victms of the disastrous fire in the plant of the American Button Company, Newark, N. J.., has concluded that the officials of that company were guilty of gross negligence in not having provided proper fire protection. The eleven deaths might have been avoided, said the jury, "if the laws of the State of New Jersey had been complied with regarding fire drills, safety guarding of stairways, in protecting them with fire resisting material, as ordered by the Department of Labor, and provided for by the laws of the State of New Jersey."

Florida, Ohio, Wyoming, and Nevada have voted for prohibition, making thirty-one States now in the dry list. Utah, which had previously banned liquor by statute, now incorporates prohibition into its constitution. Aside from these new victories, which do not constitute all the gains made last week, advocates of the Federal prohibition amendment have another reason for hopefulness. Out of the fourteen commonwealths which have already ratified that measure, no less than five are wet States—Massachusetts, Delaware, Maryland, Louisiana, and Kentucky. Assuming that most of the thirty-one prohibition States will ratify the amendment, very few further accessions from the wet column will be necessary to make the total foot up to the required thirty-six.

Domestic and Naval

A Japanese fishing boat recently brought in a swordfish weighing 917 pounds, the largest taken in Hawaiian waters for many years. It brought $82.53 when auctioned at the fish market.

The total of the world's shipping tonnage is only 7 per cent. less than it was at the beginning of the war. This announcement was made by the Chairman of the Senate Military Committee. American tonnage has more than doubled.

The "J. E. du Bignon," three-mast schooner, 458 tons register, built at Boston in 1890, and owned by J. J. Turney, Philadelphia, has been sold to A. A. Hart, New York. She was wrecked in 1916 and acquired by her late owners at underwriters' sale.

Robert Hague, of San Francisco, recently appointed on the staff of John H. Rosseter, director of operations for the United States Shipping Board, has been placed in charge of the Department of Design, Inspection and Repair in the Division of Operations.

Naval estimates for 1920 have been reduced $1,180,315,000 as the result of the signing of the armistice, Secretary McAdoo was informed by Secretary Daniels. The original estimate on a war basis was $2,644,-307,000, and this has been reduced to $1,463,992,000.

Holland has decided to release from her ports approximately 50,000 tons of idle shipping to carry from the United States the balance of grain due her in accordance with the terms of President Wilson's offer of last March—which provided 100,000 tons of bread cereals, half to come from the United States and half from South America. Holland's change of policy is attributed, in some quarters, to the change in the military situation.

The United States Steamship Company, New York, which through its subsidiaries is building thirty-two ships for the Shipping Board, announces it has signed contracts for the construction of fifty-six steel ships for private owners at an approximate cost of $90,000,000, work on the new ships to begin after the completion of the Government contracts. The company has three yards, one at Noank for wooden ships, one at Groton for steel vessels and one at Alexandria, Va., also for steel ships.

The "Acrema," recently launched by the Foundation Company, at Kearny, N. J., is the last of the ships contracted for by the company. The force of 6,000 men has been gradually cut until at present there are but 1,000 shipbuilders at the plant. The Foundation Company is the first shipbuilding corporation to finish its contracts. Wooden cargo carriers only were built at the yard. The yards have been leased from the Ford Motor Company, and will revert to that concern. The Foundation Company in all received contracts for about 130 vessels, mostly for the French Government. It has seven shipyards in operation on both coasts, the Gulf and the Great Lakes. The latest contract received by the company was for twenty 3000-ton full power wooden steamers for the French Government which will be built at Victoria, B. C.

The Public
A Journal of Democracy
Poverty is A Crime!
It isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was
"The Crime of Poverty"
It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.
Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.
Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

News from Abroad

Up to the end of August last, the Japanese Government had received this year as extraordinary revenue from marine insurance a sum of nearly 10,000,000 yen ($4,500,000).

Goods destined for Colombian points 500 miles inland from the Pacific Coast are sent up the Amazon and Putumayo Rivers by boat and over the Andean Cordilleras by pack train, a distance of more than 3000 miles.

A movement in favor of the establishment by Great Britain of a federated government for the Fijian and other Pacific islands is reported to have been launched at a recent conference of the Fiji sugar planters. According to a brief report of the conference, the incorporation of Fiji in the proposed federation was to be conditional upon a favorable expression of opinion on the question by the people of the colony.

In the great Austro-German offensive against Italy last autumn the enemy nearly reached Venice, and they had already decided amongst themselves that that city should, when peace came (their sort of peace, of course), be surrendered to Austria. So certain were they of this, says "Syren and Shipping" (London), that the Austro-American Company marked out (on the map) the site of a ten-berth building yard they intended to lay out there, and ordered all the machinery and material for the construction of the yard. If our memory is not at fault, it was Dr. Johnson who wrote: "All pleasure that is preconceived ends in disappointment."

A pamphlet entitled "Canada's War Effort," recently issued by the Director of Public Information at Ottawa, is a compilation of data regarding Canada's effort during the first four years of the war. The total number of enlistments in the Canadian Expeditionary Force from the beginning of the war to June 30, 1918, including those under the Military Service Act, is 552,601, of which number 383,523 have been sent overseas. The total casualties for the same period aggregated 159,084. The volume of domestic loans is $756,000,000, or about $100 per capita of the population. In addition to the domestic loans, securities totaling more than $207,000,000 have been issued in Great Britain and the United States.

Canada has appointed an economic commission for Siberia. The members are C. F. Just, Chief Canadian Trade Commissioner in Russia; W. D. Wilgress, Canadian Trade Commissioner at Vladivostok; Colonel J. S. Dennis, liaison officer of the Canadian Siberian Expedition, and Ross Owen, transportation representative in Russia of the Canadian Pacific Railway. Three other members representing agricultural, mining and banking interests will be designated later. According to the Toronto "Globe," the Commission "will be expected to make a careful study of local conditions in Siberia, both economical and social, to inquire into transportation facilities, to ascertain the wants of the farming community in respect to agricultural implements and equipment, and to note the improvements in methods of handling grain, and in mining, forestry, and fishing operations."

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

287 HANSFORD BLDG., 268 MARKET STREET

Under Capt. Christensen's personal and undivided supervision, pupils of this favorably known school are taught all up-to-date requirements for passing a successful examination before the U. S. Inspector.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 14. SAN FRANCISCO, WEDNESDAY, DECEMBER 11, 1918. Whole No. 2516.

WAGES VS. PUBLIC HEALTH.

The Direct Relation of Wages to the General Well-Being.

Mr. Arthur E. Holder, for many years Legislative Agent for the American Federation of Labor at Washington, D. C., and now the representative of Labor on the Federal Board for Vocational Education, has been an occasional contributor to the Journal for a long time past. All of Mr. Holder's contributions have been timely and instructive.

Of exceptional merit, however, is an address just delivered by Mr. Holder at the meeting of the American Public Health Association, held in Chicago.

The subject assigned to Mr. Holder was: "What is the Relation of Wages to Public Health?" Here is his answer—earnestly commended to a careful perusal of the Journal's readers.

The health of the child is the strength of the nation.

The power of a country, the happiness and security of a people rests on the broad base of public health.

The first duty of man should be to preserve his health. The first and most patriotic duty of a statesman should be to care for the health of the people.

What is the relation of wages to public health? It is not possible to adequately cover this question in the short space of fifteen minutes. The subject can only be roughly sketched. There is no problem more vital. The term "wages" is applied to the incomes of working people.

The working people and their families constitute the majority of all countries. It is safe to say that in the United States the ratio is easily 9 to 1 if we include as we should agriculturists and such workers whose incomes are rated as salaries.

It follows as a matter of course that whatever affects a proportion so large, automatically affects the relation of the whole.

Therefore, wages and health are reciprocally related, each affecting the other. The higher the wage, the better the health of the wage workers, may be accepted as axiomatic. The better the health of the wage workers, the better the health of the public. Improvement in public health means increased total production and prosperity, greater safety, more happiness. The reasoning is easy.

This leads us to other questions, vital parts of the original. First, are wages sufficient to keep the wage earner in good health? Second, is the public health maintained satisfactorily?

The flourishing existence of many large sick and beneficial societies, like the Odd Fellows, Foresters, K. P.'s, K. C.'s, Workmen's Circles, Trade Unions, Masonic and other fraternities merit a negative conclusion. Some assert that the very existence of such organizations are equivalent to an indictment of our present wage system and our lack of system in caring for public health.

If statistical information is helpful to a clearer light, consider the following facts: In 1910 over 38,000,000 persons were engaged in gainful occupations. "Manufacturing and Mechanical" absorbed 10,808,000. I select this the largest group of wage earners for my illustration and find upon analysis of census bureau reports that our industrial progress is unbalanced.

Wage Earner's Share of What He Creates.

In 1850 the value of our average annual per capita product in manufactures, was $1064. Sixty years later, in 1910, the average per capita production had increased to $3125. Wages paid employes of manufacturers averaged $247 in 1850. In 1920 wages had risen to $518, an increase of only 109 per cent. as compared to 193 per cent. increase in average production. Carrying this analysis farther we find that in 1850 the wage earner obtained 23¼ cents of every dollar's worth of value he created. In 1910 this proportion of product had shrunken so the wage earner got only 16½ cents on each dollar's worth of goods he produced.

This is the base or foundation of the question: "What is the relation of wages to public health?"

The next view reveals the first effect—which we may identify as "instability of industry"—or, "depression in business," more commonly known as "panics."

This brings us to a debatable inquiry, "What causes panics?" High tariffs—low tariffs—gold standards, silver standards, good crops, poor crops—or spots on the sun? All of these and many more excuses have been given and explanations elaborately made by highly gifted scientific men.

Unfortunately but few have seen the truth or grasped the facts that panics are brought about more by inequitable distribution of wealth than any other cause.

Formerly when the laborer got 23 cents in wages for each dollar of his product, panics occurred about once in twenty years, as witness 1837-1857-1877. Since real wages shrunk to 16 cents on the dollar, panics roll around more frequently as the record shows, 1884-1894-1907-1914.

Wages, Panics and Public Health.

What has business activity or panics to do with public health? No other factor in modern life is so powerful, nothing influences our individual health more than severe changes in our economic life. During busy periods men work at high speed and high tension from early in morning till late at night. They are literally rush to death.

During panicky periods, the workers and employers spend a large part of their energy and vitality fretting their lives away for fear their jobs or business will suddenly cease and leave them economically stranded.

This answers the question and explains in concrete form the relation of wages to public health.

All medical men agree on three prescriptions for many human ills; first "do not worry"; second, "take a rest"; third, "go away for a change."

The first seems humanly impossible to avoid, the last are too expensive to indulge in by that great army of the public that work for wages. Hence, small ills grow into great chronic afflictions—you physicians know the balance of the human story too well for further reminders.

This brings our query to the relation of working hours of wage-earners to public health, and is answered by recalling your attention to the tenacity of the workers for eight hours or a shorter working day.

Wage workers find this the most effectual way to more equitably distribute social wealth and the greatest preventive of disease. Since the union cigar makers adopted the eight-hour day in 1886, from 12 to 15 years have been added to the average life of cigarmakers.

The printers have added ten years to their life since they abandoned the ten, eleven and twelve-hour day.

Similar experiences have been proportionately recorded by miners, machinists, bricklayers, needle workers, carpenters, metal polishers—and thousands of other organized wage earners. Our trade union vital statistics also show that many years of life have been added to the lives of such wage earners who have shortened their work day and increased their wages.

Every improvement in group health thus briefly described correspondingly improves the public health.

The greatest of teachers reminded us that "Man shall not live by bread alone." Of course this means all men. We may lay too much stress on the bread and butter aspect of the workers' life, but it should not be forgotten that the wage earner, his wife and children have a spiritual hunger. If time and means will not allow a satisfaction for this hunger, it means that essential joy is crowded out of the workers' lives, thus leaving them subject to nervous ills. Organized wage earners have been righteously jealous of their health. They have been instrumental in securing many Federal and State laws for the protection of life and conservation of health. They never urged such legislation as a special favor for themselves but always for the common good. They have had more struggles with corporations for health and safety conditions of work than they have for wages.

The workers realize with the deepest significance that health is their capital, their chief asset. To lose their health is to lose their power to earn. To keep health or improve health means increasing the power to produce. Wages depend in the last analysis upon quantitative production, the greater the production the greater opportunity is afforded for workers to raise their wage scale.

The increase and power of organization of workers insures: First, improved health; second, increased production; third, fewer accidents;

fourth, shorter hours for fathers and mothers; fifth, higher wages; sixth, better education and health of children; seventh, higher grade citizens; eighth, employment of a better grade of certified physicians; ninth, fewer patent medicines, drugs, nortrums, quacks and whisky.

Let me relate just one illustration from many, gathered during a very busy life. A wealthy mine owner of West Virginia admitted to me in June of this year, that after fighting organizations of his miners for many years, he finally changed his attitude in 1912 and this was the result. Before organization in his field, the highest average production was 5.4 tons per man per day of ten hours. Since organization the average output had risen to 9.2 tons per man per day of nine hours. Fifty per cent.-less accidents had happened, no stoppages had occurred, no illicit drunkenness reported, less sick ness, fifty per cent. less labor turn-over, more school houses, finer social conditions, happier neighborhood, a more contented and prosperous boss.

Lack of Vital Statistics.

If it were possible to secure complete and accurate statistics of men, women and children in this country whose health is impaired and whose lives are materially shortened by employment under conditions which were preventable by the exercise of intelligence and comparatively small cost, the totals revealed would be far more appalling than the losses during the present war.

The losses and sufferings due to preventable ill health tax the imagination. A large part of the country population and the city population as well suffer from unnecessary ill health. Good health is an important factor in the production of wealth, let alone the satisfaction of good health to the individual in his life as a consumer. The need of knowledge along health lines is widely attested. Nowhere does ignorance exact heavier penalties.

It has been calculated that out of our normal industrial army of over 38,000,000 workers, there are at all times about 3,000,000 incapacitated for full service, and it is further calculated that, of this 3,000,000, one-third are from absolutely preventable causes, and about one-third more through causes probably controllable.

The Yearly Toll of Preventable Disease.

One million five hundred thousand persons die in the United States every year, many of the deaths being premature. It is estimated, no doubt, too conservatively, that for every death there are two additional persons sick. A total of 3,000,000 sick. The greater part of such sickness is preventable. Some eminent authorities estimate the economic losses each year in the United States due to sickness range from $1,500,000,000 to $2,000,000,000. The greater part of sicknes can be prevented. There is no more profitable undertaking than the promotion of health, and no form of knowledge more urgently needed in curricula than effective hygienic science. Tuberculosis might be made as rare as smallpox, but on the other hand the death rate is high from the disease, being 183.6 per 100,000 in 1907—500,000 persons in the United States are suffering from tuberculosis. One-seventh of all deaths are due to it. The economic loss in the United States in 1909 from tuberculosis is estimated at almost 50 per cent. above the value of the wheat crop of the country.

In 1908 there were 35,000 deaths from typhoid fever and 350,000 cases in the United States. Better local sanitation would have prevented 75 per cent. of the cases, while sanitation for the country at large would have prevented most of the remaining cases. Whole families in the country are often almost exterminated by typhoid fever developed from infected wells and unsanitary surroundings.

Typhoid has been nearly eliminated in communities where intelligent precautions have been taken. The results of education appear at once in decrease of the death rate from this disease. About 80 per cent. of the cases of typhoid developed from drinking impure water, a cause easily removed by simple scientific methods.

Pneumonia causes a high death rate, in some cities one-sixth of the number of deaths. Methods of prevention, similar to those for tuberculosis, are well established and would prevent the majority of cases if intelligently employed. ployed.

E. E. Rittenhouse, president of the Provident Savings Society of New York, asserts that annually in the United States human lives equalling the population of the State of North Dakota are sacrificed through ignorance and neglect of reasonable and known preventive measures, and that preventable disease and accident yearly destroy more lives than have been lost in all the country's wars since the Declaration of Independence.

Economic Waste by Industrial Accidents.

Fearful losses of life and economic waste result yearly from industrial accidents. Unfortunately we are still in the dark as to the number of industrial accidents, notwithstanding continuous demands by labor and forward-looking employers for definite data from State and Federal authorities. The only accurate data on hand is confined to mining and transportation. For the five-year period ending December, 1917, a total of 16,526 workmen were killed and over 49,000 injured in our mines and quarries. For the five-year period ending December 31, 1917, the railroads of the United States killed 48,801 and injured 931,764. Of the killed and injured more than seven out of eight were railroad employes. It must be remembered that men who work in mines and quarries and on our railroads are picked men. Invariably they are the strongest types.

The extreme prevalence of accidents as shown suggests the need of better knowledge of dangerous employments and risky situations. Not a day passes without its toll of avoidable mishaps, entailing pain, expense, household sorrow, permanent injury, public loss. Similar accidents are continually being repeated, but adequate warning is too rarely given. Individuals learn by experience of the most expensive kind. Mere prohibitions as usually given are not effective. Were a manual of accidents prepared in the spirit of science and widely distributed tens of thousands of accidents with their incidental expense, would be avoided every year.

Hundreds of typical accident situations could be demonstrated in laboratories and lecture rooms, and thus an effective experience be had without the wasteful, needless, experience of real accident. It is questionable if people need to learn nearly so much by experience. The purpose of education is to substitute learning by understanding, in place of learning by experience.

We hear much of efficiency experts. I know no field which presents greater opportunities for their efforts than that of scientifically surrounding workers with conditions calculated to keep them in condition fit to perform their best service.

Problem of Equal Interest to All.

It is too painfully apparent that this problem of health and safety is of equal interest to employer and employe. An injury to one is the concern of all. It is to the interest of all the people of the country to recognize the fact that it is quite as important for men to be kept in the same state of high efficiency as machinery; and other forms of property.

Restriction of output is often justified as necessary in order to preserve the health and vigor of the worker, thereby conserving the human resources of the nation. Energy and ability to produce are the workingman's capital, but it is intangible and is not adequately protected either by statutory law or trade union agreements. Trade unionists know that speeding up beyond definite limits impairs the efficiency of the worker and reduces the total output during his life. From this point of view, it is nothing short of robbery to quickly wear out a workingman and impair his capital while only paying him "existence wages." An industry which uses up the vital energy of a worker in a few years is coining the nation's life-blood into dividends. No industry has a right to more than that amount of the worker's energy which can normally be replaced by proper food and rest. It is obviously to the interest of the worker and of society that overdriving and sweating be abolished. The policy of organized labor toward such a consummation, is acting for the best interests of all society in a thoroughly praiseworthy manner. Restriction of the output of an individual worker during a given day, week or year is justified because it increases his total output and allows the worker to become a better citizen and a more desirable member of society. Careful tests should be made by employers and employes in co-operation in order to ascertain the proper amount of time needed to perform a given job. Systematic investigations of this nature would give definite standards or averages for the output of the average worker.

Conservation of Worker's Health.

Great enthusiasm usually accompanies proposals to conserve natural resources, animal life and food products. This is of course perfectly proper. No criticism is heard as long as the output is limited to save material products from utter annihilation, but when the health of the worker is at stake there seems to be little sympathy with any limitation less than that which the capacity of a skilled, subsidized "pacemaker" demonstrates.

The charge of malingering is too thoughtless. The cry of "slackers" frequently unfair.

Listen, gentlemen, and friends of humanity to this unvarnished report of some workmen's experiences:

"Officers of the Oakland (Cal.) Boiler Makers' Union declare that newspaper sensationalism about strikes and high wages in shipyards is 'becoming tiresome.' The publicity committee of this union reports 'We have made careful estimates and find that there are only 70 men out of the 15,000 working in Alameda County shipyards who are drawing $50 a week or over.'

"The average wage paid shipyard workers is $24 a week. The time limit of endurance for a man working with a pneumatic hammer is six months on general work, and three months on the shell. After that he has to take a lay-off and rest. The average length of time for a man to stay with riveting is three years. Then he must seek other work if he doesn't break down altogether. We have many riveters in the hospital now, suffering from breakdown.

"We know that the Government wants ships and we have been willing to waive rules that in ordinary times we have found necessary to protect the lives and health of our members.

"We have waived objection to piece work for the duration of the war, we have waived apprentice rules, we have consented to increasing the number of helpers to each mechanic and we have worked overtime against our wishes in our desire to aid the Government get more tonnage into the war.

"Despite these conditions we are being daily misrepresented by newspapers that howl 'strike' when we instruct officers to take up with the Government officials the question of health conditions which will prevent physical collapse of our associates."

Without undertaking to enumerate all the efforts by the American labor movement to conserve human welfare I close this recital by recording some of the many declarations in the Labor program for health and safety of the workers and all the people.

Labor's Program for Health and Safety.

(1) Continued agitation for a shorter work day to a maximum of eight hours for all manual toilers.
(2) Demand for a higher minimum wage for all labor.
(3) Encouragement of outdoor exercise.
(4) Formation of fresh-air clubs.
(5) Recommendation of temperate habits, including a diminution of the use of intoxicants.
(6) Release from work at least one full day in seven.
(7) Play grounds for children adjacent to all public schools.
(8) Large, open "breathing spaces" or parks interspersed in all cities.
(9) Total elimination of the sweat shop system.
(10) Rigid inspection and enforcement of law in all mines, mills, factories, and workshops.
(11) Saturday half holiday, fifty-two weeks in the year.
(12) Incorporation in trade agreements or in collective bargains governing working conditions of provisions for suitable ventilation, sanitation and safety devices.
(13) That wherever possible the suburban residence idea be strongly favored, coupled with a demand for one-half rates on steam and trolley lines during the usual hours of going to and returning from work.
(14) Further agitation for better rooms and fresh air ventilation in all living apartments.
(15) A positive demand for the passage and enforcement of rigid anti-child labor laws in States where they do not now exist.
(16) Abolition of night work by women and minors.
(17) Equal pay for equal work regardless of sex.
(18) More conferences and better understanding established among employers, workers and physicians.
(19) Inauguration of community forums where health conditions can be openly discussed by parents and physicians.
(20) Elimination of Latin and substitution of English in prescriptions. This mystifying practice is un-American and does not help practitioner or patient.
(21) Continuous medical and dental inspection in all public schools at public expense.
(22) Complete systems of up-to-date physical education in all public schools at public expense, with further provision for free examination of adults by medical faculty of schools.
(23) Concentration of all Federal health agencies into one department with a secretary at its head, he to be a member of the President's Cabinet.

COORDINATION ON THE LAKES.

Now that the season is over for iron ore shipping on the Lakes, the benefit of coordination is fully appreciated. Coordination was established for the season of 1918 in order that the fleet, reduced by the commandeering of ships for ocean service, should be sufficient to move without difficulty the iron ore, grain, coal and other bulk tonnage of the Great Lakes. Under it the control of all the 400 or 500 ships of a size suitable for iron ore, of all the upper lake iron ore docks, and all the lower lake ore receiving docks, was placed in the hands of a central authority. This has worked out so well that practically as much tonnage had been moved by Nov. 1 as was moved the year before, with a larger fleet, by Dec. 15. So well that in spite of a rate of $1 a ton this year, compared with a wild rate of $1.50 last year, and in spite of higher wages, coal, and other supplies, the ships have made more money this year.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

A. F. of L. to Call World Labor Congress.

Complying with instructions of several conventions, the American Federation of Labor Executive Council will issue invitations to the trade union movements of all nations to join with the American Federation of Labor in an international labor conference to be held at the same time and place that the Peace Conference between the warring nations is held.

The purpose of this conference is to consider and help in peace discussions and to establish a new International Trade Union Federation.

As the American Federation of Labor convention has declared that at least five delegates shall attend this conference, the Executive Council has selected the following from its membership to represent the wage workers of North America:

President Gompers, Vice-President Duncan, Vice-President Alpine, Vice-President Duffy, and Vice-President Green.

Industrial Power is Military Base.

The trade union theory that industrial power is the essential factor in social movements and political success is strikingly illustrated in an article written by J. R. Finlay, mining engineer, and published in the Engineering and Mining Journal, current issue.

The writer makes no appeal to emotion or sentiment, but declares, in the bluntest manner possible, that a nation without industrial power is an international nonentity, both from a business, a political and a military standpoint.

As an argument in support of trade unionism, the article is a classic. It rebuffs those who have attempted to associate the unions with activities that would dilute organized labor's bedrock theory—industrial power.

Mr. Finlay says:

"The war has proved one thing so thoroughly that we may take it for an axiom —namely, that the mass of military power is about equal to the mass of industrial power. The same organizing forces that create one create the other. A weak industrial nation is not a great military nation, and the people who try to make it so will find that they are building up a sophistry. On the other hand, a strong industrial nation is not necessarily a military one, but that is a matter of its own option. It can be, whenever it wants to be; and it will want to be whenever it feels a necessity strong enough.

"Another axiom is that political power—internatonal influence—is in proportion to this interchangeable industrial or military power. I say power, not the assertion of power, or the use of it. The fact that some clever leader in an inferior nation may attract great attention in international affairs, and give his country the appearance of power, may be due wholly to the fact that some superior nation does not oppose him. It may have no reason to, or it may not have a leader who can use its power.

"Another axiom is that the industrial power of a nation is not measured by gold or by foreign trade or by bank statements. It is simply the producing capacity of the people, which will be a function of their numbers multiplied by their efficiency and again by their national resources."

City-Owned Car Lines Has Lost Its Terror

Municipal ownership of street cars has lost its terror to the American Electric Railway Association, which has referred to its executive committee a resolution recommending that the member companies encourage "in every reasonable way the public acquisition of the present electric railway properties." The president of the association was authorized to call a meeting of the association when the executive committee is ready to make its report on the resolution.

This action was taken at a meeting of the association in New York which was attended by representatives of 85 per cent. of the country's electric street car lines.

The resolution declares that municipal franchises are no longer of value, and that legislation, high wages, and high prices for material have made it impossible to earn a "compensatory return." Another part of the resolution says that the private owners will "make sacrifices rather than see the communities deprived of street railway service."

President McCulloch of the United Railways Company, St. Louis, Mo., made the point that public ownership would place street car employes in the civil service and that then their pay would be regulated as is the pay of firemen, policemen and other city employees who often receive less than many railway employees. The St. Louis man believed this feature of public ownership would solve the question of service.

In discussing the question of payment for the car lines the resolution favors "arranging such terms of payment as conveniently accord with the financial limitations of the respective States and municipalities." This would indicate that street railway and allied interests will oppose the people taxing themselves heavily for a few years to save interest charges, but favor long-term bonds with a set income guaranteed by municipalities, as is the case now with the Federal Government and railroads, telegraph, telephone and express companies during the war period.

Rural Children Neglected.

That thousands of children in rural and small town communities are being deprived of a fair chance for normal development is the assertion of the children's bureau, Department of Labor, in a report on conditions which tend to juvenile wrong doing in the country.

It is stated that 135 New York State children who were implicated in some sort of wrong doing and who came from 144 different families were studied, and their family surroundings were scanned in an effort to discover what had led them astray. Most of the children were of normal mentality, although about one-fourteenth were noticeably deficient, but lack of opportunity for moral and mental training, for recreation and lack of variety of interesting occupations with promising futures led these children of normal mental power into delinquency.

The twenty-one New York State com-

World's Workers

Hon. Thomas Crothers, Minister of Labor for the Dominion of Canada, has resigned. It is stated that ill health is the cause. He is succeeded by Senator Gideon Robertson, third vice-president of the Order of Railroad Telegraphers.

The unionization of farm workers in England and Wales has been phenomenal, and headquarters of the Agricultural Laborers' and Rural Workers' Union have been moved to London. In one year the union has increased its membership from a few thousand to 100,000 and it is growing at the rate of 10,000 a month.

The Scottish Co-operative Wholesale Society, Limited, held its jubilee anniversary meeting recently in Edinburgh. According to the statement of the president, Mr. Robert Stewart, since 1868 the sales have increased from £81,094 to £17,767,099 in 1917. Fifty years ago the society's capital amounted to £5174; last year it totaled £5,620,480, while during the whole period of its existence profits amounting to £7,558,197 had been returned to members.

The British Ministry of Reconstruction has begun the issuance of a series of pamphlets dealing with reconstruction problems. The first, entitled "The Aims of Reconstruction," is a compilation from the speeches of Dr. Addison, the Minister of Reconstruction, outlining the main problems of reconstruction, such as shipping, finance, joint industrial councils, etc. The second, entitled "Housing in England and Wales," gives data showing the estimated deficiency in housing—300,000-400,000 for England and Wales alone—and summarizes the steps which are being taken to meet the situation.

The Canadian railway board of adjustment No. 1 has ruled that wage awards for maintenance-of-way employes on the British Columbia division of the Canadian Pacific Railway shall apply to Japanese and other Oriental labor. The employes held that the original award should include all workers doing the same service without regard to whether the individual "was black, white or yellow." Trade unionists express the opinion that decisions of this character will go far toward lessening the cry for the importation of Oriental labor. The adjustment board is a voluntary organization consisting of six representatives of the railroads and an equal number representing organized railroad employes.

At a recent conference in London a scheme for the prevention of strikes in shipyards was unanimously adopted by the Shipbuilding Employers Federation and the trade unions concerned. Sir Robert Horne, on behalf of the Admiralty, addressed the conference and emphasized the necessity of an understanding to prevent stoppages of work and consequent delay in the output of ships. Delegates attending the conference have expressed their satisfaction at the results obtained, and it is understood that representatives of employers and workers will visit the districts affected by the agreement for the purpose of explaining in detail the terms of the scheme arrived at, and to urge upon all concerned the need for strict adherence to these terms.

NOTICE.

Masters, Mates and Pilots' Association of the Pacific has opened a branch office at 529½ Beacon St., San Pedro, Cal.; Capt. H. C. Frerichs, Agent.

INFORMATION WANTED.

Thomas F. Noone, a native of Ireland, born 1887, last heard of in New York, Feb. 15, 1918, is inquired for by his sister, Mrs. Thomas J. Condry, 9 Rosseter St., Great Barrington, Mass. 10-16-18

Members of the crew of the SS. "Gulf of Mexico" may obtain money due them for salvage services rendered to the bark "Portugal" by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Members of the crew of the SS. "Kellogg" who were on board when she picked up the SS. "Catania" can obtain money due them for salvage services by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Anyone knowing the whereabouts of Jan Zwart, will please communicate with Consul General of the Netherlands, Mills Bldg., Montgomery and Bush streets. 10-23-18

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

Hans Meyer, member of the Sailors' Union of the Pacific, who was last seen in Honolulu, T. H., on Feb. 17, 1914, is inquired for. Any one knowing his whereabouts, please notify Henry Capell, 51 South St., New York, N. Y.—5-29-18.

Pacific Coast Marine.

Captain F. Tristan of the French high commission, is in Seattle for a conference with officials of the Foundation Company relative to the transforming of the Portland and Tacoma plants of that concern into steel ship construction plants to build for the French.

The Skinner & Eddy plant at Seattle on December 7 launched two big steel ships, the "Edgefield," 9600 tons, and the "West El Cajon," 8800 tons, bringing the total product of the plant up to forty vessels of 8800 tons or greater. The plant broke ground three years ago next March.

About twenty-eight quarts of good old Scotch was unearthed, or rather unriced, by Customs officers at Tacoma during a search of the Garland Line steamer "Justin," just in from Shanghai. Almost every trip some liquor is found on the Oriental vessels and in this hunt the stuff was found in the Chinese quarters, concealed in sacks of rice.

Up to date Tacoma has launched forty-seven wooden and steel vessels since the United States went into the war and peace was declared. Of this number seven are steel, twenty auxiliary schooners and the remainder Ferris type wooden ships. So far the vessels put out at the Tacoma yards are making better records in sea service than some of the ships put out at other Northwest yards.

Pilot Julius Allyn has been exonerated by the Federal steamboat inspectors at Portland in connection with the recent sinking of the port of Portland tug "Pronto" by the Government steel steamship "West View." The pilot was in charge of the "West View," and was trying to make a landing near Municipal dock No. 1, when the stern of the ship swung into the small tug, which was tied up alongside the dock. The ship's rudder crashed into the starboard side of the tug, and the smaller vessel went to the bottom in a few minutes.

Alleging the existence of a situation that has helped British Columbia shipyards acquire sixty contracts since the declaration of the armistice, the Washington wooden ship builders sent an urgent message to their representative at Philadelphia and to the Shipping Board requesting immediate remedy in view of the recent Shipping Board cancellations of contracts. Mayor Hansen of Seattle supplemented the association's plea with an urgent message calling attention to the labor likely to be idle resulting from the discharging of thousands of soldiers in the near future.

Miles Standish has been appointed a State Harbor Commissioner by Governor William D. Stephens of California to succeed Arthur A. Arlett, whose resignation was accepted. John H. McCallum, who has been acting president of the Board during Arlett's prolonged illness, will head the Commission and will receive an increase of salary from $3000 to $5000 a year. Standish lives in Berkeley and was for many years engaged in the lumber business, with large timber holdings in Mendocino County. He is chairman of the Maritime Committee of the Chamber of Commerce and has taken active interest in the port of San Francisco for several years. He is well acquainted with harbor conditions, as his committee has devoted months to an investigation into the needs of the port.

With her pumps racing at top speed to reduce ten feet of water in her holds, which was shipped when she bucked a terrific gale off Honolulu, the naval collier "Saturn" was forced to return to port. The "Saturn's" top works were badly battered by seas which reared at least thirty feet into the air. She carried a crew of 200. The "Saturn" is the sister ship of the collier "Cyclops," which disappeared without a trace off South America last summer. The gale which forced the "Saturn's" return was believed to be part of the hurricane which swept Honolulu and the island of Oahu on December 3rd and 4th, causing damage estimated at between $250,000 and $500,000. Five hundred troops in the Hawaiian Department were ordered out to help clear the streets of storm wreckage. The velocity of the wind averaged from fifty to eighty miles.

The barkentine "James Tuft" arrived at San Francisco during the week from Sydney after a fast passage of sixty-two days with a cargo of 1200 tons of copra loaded at a rate highly profitable to the owners. The copra was consigned to Burns, Philip & Co. Captain Wikander told an interesting tale of how it is at times profitble to have a vessel leak when it enters the port of Sydney. There was just enough water in the hold of the vessel and enough additional coming in to prevail upon the authorities at the Commonwealth port to decide that it would be bad policy to load the craft on the return trip with wheat which might readily become spoiled. The leak was a well behaved one and there was little indication of moisture in the hold on the homebound voyage. Incidentally the rate on copra is better than on wheat, so there is no complaint being made.

Esteven Point lighthouse, which contains one of the most powerful lights on the British Columbia coast, was put out of commission on December 6 by the earthquake that rocked Victoria and Vancouver. The earthquake shook the mercury out of the lens table, making it impossible for the lens to revolve until new mercury can be supplied. The lens is made of glass and brass and weighs about a ton. It takes 343 pounds of mercury to float the gigantic glass. Sleepers at points along the west coast of Vancouver island were shaken from their beds by the same earthquake. F. N. Denison, superintendent of the Gonzales Observatory at Victoria, said the quake was the strongest ever recorded by the Gonzales seismograph. A maximum disturbance of one millimeter was registered. The center of the disturbance was estimated out in the Pacific 100 miles west of Victoria. Superintendent Denison said the earthquake was associated with similar disturbances recently reported in South America.

The U. S. Senate has adopted a resolution ordering a thorough investigation of charges that the entire wooden ship program has been a failure, involving a loss to the American people running high into the hundreds of millions of dollars. The investigation will be conducted by the Senate Commerce Committee. The committee called upon the Shipping Board to furnish a detailed statement showing: "1—The number of ships built by the Emergency Fleet Corporation, the yard where built and the kind and cost of each ship. 2—The number of ships launched, the number delivered, the number in service and what service and the terms thereof, including the kind of ship in each instance, and if there has been delay between launching and service, the reason therefor, with number and kind of ships involved. 3—What has been done and when and the details with reference to providing housing for such workers under the act passed with regard thereto." These questions will furnish the basis for the inquiry.

Two applications for new piers have been filed with the Harbor Commission at San Francisco by the Transoceanic Company and the Luckenbach Steamship Company. A. S. Hammond, Pacific Coast manager of the Luckenbach concern, has requested that Pier 41, now under construction, be assigned to his company by January 1. Hammond says his company will resume its former Pacific and Atlantic coast service of freighters as soon as the vessels requisitioned by the Government are released. The Transoceanic Company now shares pier 29 with the Mitsui Company and the China Mail Company. Both requests are being considered by the Harbor Board. In addition to these companies, it is known that the American-Hawaiian Steamship Company will also renew the service between this coast and the Atlantic as soon as its steamers are released by the Government. It is estimated that fully ten other concerns will apply for new or additional pier space, and it is probable that new piers will have to be built before the requests of all can be granted.

The entire kelp-harvesting industry along the Southern California coast probably will be abandoned within the near future, according to officials of the various operating companies. Potash, the main product of the seaweed, has been reduced from $400 to $75 a ton as a result of the ending of the war. Acetone, a by-product, which during the war sold as high as $15 a gallon, has been reduced to 75 cents a gallon. The practice of gathering kelp and using it for fertilizer purposes probably will be continued by independent concerns, but officials say it will be impossible to keep in commission a big kelp harvesting fleet and operate at a profit at the present low prices for potash, acetone and other by-products. In discharging all the employees of its San Diego kelp harvesting fleet the Hercules Powder Company gave each mariner a month's pay as a bonus for excellent service rendered. Captain A. A. Morris, former port superintendent of the Hercules Powder Company at San Diego, will resume his duties as a State harbor pilot for this port, beginning January 1.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.
Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, DECEMBER 11, 1918.

LABOR AND THE RED CROSS.

The Red Cross and labor organizations represent great conserving constructive social agencies. Both are part of the democratic machinery through which we are working, wholly with a view to future good. They have more than a national meaning; they are enlisted in the great service army, and to think of one without the other, is like the hand thinking it does not need the eye, the ear or the brain. In practical language, "they are of one piece." The work of the world waits on them, and they must have right of way.

Everywhere that man goes by land and sea—from furthest east to farthest west—from icy cold to the torrid clime, there the American Red Cross does its service work for humanity. This is as true of the merchant mariners as of the sailor of our Navy—as true of the civilian as of the soldier. Race and creed do not figure in Red Cross work; the Red Cross will be found wherever succor and help and sympathy are needed.

Long before the war began, the Navy and Red Cross worked together alleviating suffering in distant lands, devastated by cyclones, earthquakes and epidemics. When war began and we took an active hand, the Red Cross offered its services to the Navy, which promptly accepted the proffered aid. Surgeon-General Braisted of the Navy asked the Red Cross to act as recruiting agent for nurses, doctors and hospital attendants.

So the Red Cross took up this work. It organized eight naval base hospitals and units, with 250 beds in each and a personnel of 170, in which are included ten medical officers, one dental officer, forty nurses, twenty reserve nurses, and one hundred enlisted men. Another four such units are now in process of organization. In addition, the Red Cross organied thirty-five nurses' detachments, with an average of from ten to twenty-five nurses in each. The total number of nurses enrolled with the Red Cross for naval services is more than one thousand.

Then, too, the Red Cross converted three Pullman cars into mobile laboratories for use of the Navy Department. It furnished the steam yacht "Surf" for use as an ambulance ship.

The United States Navy has one of the finest hospital and sanitary organizations in the world. It could have taken care of its own sick and wounded, but realized that despite its perfect organization, governmental red tape might some day hinder and delay prompt action. For that reason it asked the co-operation of the Red Cross. The understanding now is that in an emergency, no matter what it may be, the Navy Department can call upon the Red Cross morning, noon and night, for supplies, doctors, nurses—for anything the Red Cross may have.

So far as the merchant marine is concerned, the Red Cross has done its service. On August 5 of this year there appeared in the New York World the following brief sentence:

> The American Red Cross is making the survivors comfortable and putting the patients on trains to be removed to hospitals.

This sentence appeared in the middle of a two-column cable from a "British Port," describing the torpedoing of the ambulance ship "Warilda," used by the British to transport wounded across the Channel.

On the receipt of news upon the sinking of the "Tuscania" with 2000 soldiers from America aboard, the Red Cross dispatched representatives to Ireland to care for the survivors among soldiers and crew. Necessities and comforts were shipped to a rest camp to which the survivors had been taken.

Then the Red Cross, anticipating further maritime disasters, established emergency depots throughout Ireland for the storage of supplies. Everything needed by shipwrecked men was made ready for any emergency.

To continue this service for our men on the seas and to do the vast service work on shore, among all peoples and in all climes, the Red Cross must have the active support of all Americans. With this end in view it will hold its second annual Christmas Roll Call during the week of December 16 to 23, when it is hoped there will be a unanimous response for the call to membership. Last year 22,000,000 adults and 8,000,000 children took the Nation-wide pledge to sustain the American Red Cross.

FILE YOUR CLAIMS!

Secretary of State Lansing has issued a notice inviting owners of ships and cargo to file with the State Department, within thirty days from December 1, 1918, information relative to losses sustained through activities of German submarines either before or after the United States entered the war.

According to the official records of the Bureau of Navigation, Department of Commerce, 145 American merchant vessels of 354,449 gross tons were lost due to acts of the enemy, from the beginning of the war in Europe, on August 3, 1914, to the armistice of November 11, 1918. The records show further that 775 lives were sacrificed with the loss of these vessels, as follows: Chargeable to submarine torpedoes, 703; killed by gunfire, 38; victims of drifting mines, 34. It has been impossible, to date, to ascertain the total number of seamen injured as a direct result of enemy acts, but the figure is known to be high. A great many of those killed and injured were members of the International Seamen's Union of America.

Having in mind this fact, Attorney Axtell, of New York, has written the JOURNAL urging that all seamen who have sustained serious injuries should file claims at once. Upon application to Mr. Axtell, or other attorneys practicing in admiralty law, proper forms for the filling out of claims will be forwarded, and everything will be done to see that their claims are properly filed with the Department of State. Dependent relatives of seamen who were lost as a result of German submarine activities should also take immediate steps to file their claims.

MANUFACTURED "NEWS."

When San Francisco waterfront reporters are short of real news they fall back on fourth-rate gossip. If gossip is scarce they sharpen their pencils, take another highball and proceed to manufacture a yarn that usually makes Jesse James look like a piker.

For example, the San Francisco Examiner of December 9 carried a thrilling front page story giving details of an "alleged" fight "to the finish" between two bloodthirsty sailors on the steamer "Nehalem."

The lurid headlines of this particular yarn read as follows: "Sailors fight with sticks of dynamite," "Officers and crew of explosive-laden steamer flee in boats as two men battle in hold," etc., etc.

A representative of the JOURNAL made numerous valiant attempts to find someone among the officers and crew of the "Nehalem" with some knowledge, direct or hearsay, of that hair-raising fight. But not a soul could be found to accept responsibility for such a crazy story. No one knew of it and no one had ever heard of it except the enterprising reporter who had to fill a certain amount of space in the Examiner to hold down his job.

The public, the patient, long-suffering public, must be entertained. And if in doing so a couple of "common" sailors are blackguarded and lied about, why, that does not matter. No wonder the average man ashore has curious notions about the "awful" sailors. He reads it "in the papers"!

MARINE INSURANCE.

That the marine insurance business is worth fighting for by private interests is fully demonstrated by U. S. Government statistics just published.

It appears that despite the Government's low marine insurance rate and the losses suffered through the submarine raids off the American coast, less than two-thirds of the premiums paid to the marine section of the U. S. War Risk Insurance Bureau have gone to pay losses.

This was shown by a report that between September 2, 1914, when the bureau was organized, and October 15, 1918, $1,846,497,000 insurance was written on ships and their cargoes, mainly those passing through the war zone, involving premium payments on 24,990 policies of $45,825,000, and that losses were $29,775,000. Profit to the Government was $16,050,000. All but $305,442,000 of the insurance has been written since the United States entered the war.

Insurance policies aggregating $187,398,000 have been written by the bureau on the lives of merchant seamen since June, 1917. Premium payments amounted to $783,000, losses $281,000, and profit to the Government $502,000.

The cost of administering the marine in-

surance for four years was $140,000, and the seamen's insurance $33,000.

Here, then, we have one branch of Government activity which costs the taxpayer not a cent, which, in fact, returns a handsome profit. So it is difficult to understand why this particular business should now be returned to private interests, unless, indeed, it is on the theory that the people have no legal or moral right to participate in any juicy melon-cutting. Prior to the war all such cuttings were exclusively reserved for a chosen few. And when the war is over these few will expect and demand a return of those inalienable rights which they voluntarily and temporarily relinquished only because they thought that pickings would be slim during the war.

GOOD POETRY.

A recent issue of "The Merchant Mariner," published weekly by the United States Shipping Board Recruiting Service, contains a splendid poem, voicing appreciation for the services rendered by the boys of the U. S. Merchant Marine. The poem appears under the caption "Not in Uniform" with the following introductory paragraph:

This poem was written by a recruit and forwarded to the "Merchant Mariner" by W. J. Grambs, Supervisor of Sea Training at Seattle.

So far, so good. But just to get the record straight here are the facts regarding the authorship of the aforesaid excellent poem. The poem was sent to the JOURNAL in June of this year by the author, a full-fledged A. B., and a member of the Eastern and Gulf Sailors' Association. It received a few finishing touches by the JOURNAL'S "poetical" editor and was first printed in the issue of the JOURNAL of July 17, 1918. The enterprising "student" who now claims credit for it probably went on the assumption that it is not very difficult "to fool some people all the time." But be that as it may, this anonymous "student" is a pretty good judge of first-class poetry.

From the commencement of the war in 1914 to the end of March, 1918, 9,247,599 kr. has been paid in settlement of claims for personal loss sustained by seamen under the Norwegian national war insurance scheme. Of this business, the greater part was done through the insurance companies who pay the amount of the policies into the national fund which distributes the benefits. Of the total of 9,247,599 kr., the State paid 2,833,333 kr., and the companies 6,049,265 kr. The remainder was made up by the following contributions, viz.: from the Norwegian Steamship Owners' Association, 150,000 kr.; from Great Britain, 10,000 kr.; and from Germany, 205,000 kr. Under this scheme the compensation in respect of each Norwegian seaman lost is 10,000 kr., and for each Swedish seaman, 5000 kr.

The disposition to indulge in personalities in the treatment of trade union affairs is a proof of that egotism that puts the individual above the mass. The egotist should remember that even if all the charges against the other fellow were true, it would make no difference in the end. The trade union, being grounded upon the necessities of the workers' existence, will pursue its way serene, indifferent, oblivious to individual perfection or frailty.

SURRENDER OF GERMAN FLEET.

A Word Picture of the "Great Surrender" Which Is Unique in History and Took Place "as Scheduled."

Writing from the Firth of Forth, Scotland, under date of November 21, the special correspondent of The Christian Science Monitor aboard H. M. S. "Benbow," First Battle squadron, has sent the following descriptive message:

Of the spectacle of the surrender of German battleships, battle-cruisers and destroyers to the Allied navies, unique in records of time and struggle, it is difficult to speak. On Wednesday night, the cruiser "Cardiff" had been sent out in advance to pick up the enemy and lead him in. She was followed in time by a whole fleet of destroyers, an enormous armada of themselves, and in the small hours of Thursday morning, the Grand Fleet left its mooring just below the Forth bridge, and, with the moon obscured by clouds but still in clear light and weather, steamed out toward the open sea. At first in these narrow and for the present highly dangerous waters, it kept in single line and then with ships so close together as to be within comfortable hailing distance, the number of them was yet so great that they made a marvelous chain of steel which stretched for nearly sixty miles.

Great black masses of machinery and guns rising like rocks from the water moved along with little noise. As the Firth broadened and there was more sea room, the column divided and ships formed themselves into two parallel lines six miles apart. The light cruiser squadrons headed each of these gigantic files and then came battle squadrons and other squadrons of lighter ships, the Australia leading the line of battleships on the port side and the Lion, scarred by the fight with the enemy she was going to meet in a new way of peace, on the other.

Battleships like the Revenge, Resolution, Inflexible, Royal Sovereign, Benbow and Iron Duke followed on one side, and battleships like the Tiger, Repulse, Renown, Princess Royal and Queen Elizabeth on the other, the last named being the flagship of Admiral Beatty. American vessels made a sixth battle squadron. Consisting of the New York, Florida, Wyoming, Texas and Arkansas, they were half way down the line on the starboard side and were appropriately accompanied by the French cruiser Amiral Aube. There were some 40 ships on each side, exclusive of destroyers, with various warship units steaming at fixed positions inside these formidable lines for signal repeating and other purposes. All went out into the North Sea like a gigantic receptacle of steel to receive and cage the rival navy that had challenged it and lost.

At about half-past 9 the Germans were sighted, being then some 50 miles east of May Island as arranged and following the sprightly Cardiff in a docile manner. Soon they steamed between the grand fleet's lines and at the proper moment all the ships of the latter altered their course by 16 points, turning about so as to accompany the Germans back toward the Firth of Forth, and to maintain the same relative order, but in a reversed direction. It was a sunny morning, the first for nearly a week, and the light gray hulls of the German ships glistened in the distance, while shafts of morning light seemed to focus at points on their sides and make them shine like bronze. The Seydlitz led the line, followed by the Moltke, Derfflinger, Hindenburg and Von der Tann, all battle cruisers and the last named a new vessel making her first extended voyage. Nine battleships followed with the flag of Admiral Meurer flying from the Friedrich der Grosse. One other ship of this class had had to be left behind, being unready for sea, while of eight light cruisers that had to follow, the Koeln, as Admiral Beatty was informed by wireless overnight, was leaking in all her condensers and needed assistance. Forty-nine destroyers followed, another one to make the 50 having struck a mine and sunk on the way across.

This was the overwhelmingly impressive and truly awful spectacle that was presented on this November morning when the fleets sailed back to the Forth. After a while the squadrons of the Grand Fleet closed in and divided each of their columns, making two lines on each side instead of one; and at this time, when the Germans were practically inclosed, the combined fleet of destroyers, comprising the 49 Germans and about four times the number of British destroyers, who were shepherding them, presented a sight that admirals and captains of the longest experience declared to be beyond anything they could have imagined and deeply impressive. Veritably the sea seemed swarming with these nimble craft. Two great airships came out and maneuvered over the fleet, and presently some British aeroplanes flew up from the decks of battleships and darted here and there, sometimes skimming close down to the decks of the German vessels.

For the sake of increasing the compactness the Grand Fleet maneuvered again once or twice, and by the middle of the afternoon this

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Dec. 9, 1918.
Regular weekly meeting came to order at 7 p. m., Frank Johnson presiding. Secretary reported shipping medium. R. H. Blackwood, Agent pro tem. at Honolulu, T. H., tendered his resignation, and Jack Edwardson was elected to fill the vacancy for the unexpired term.

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., Dec. 2, 1918.
No meeting. Shipping slow; men scarce.

J. ETCHELLS, Agent.
Room 11, de Cosmos Block, 1424 Government St.

Vancouver, B. C., Dec. 2, 1918.
Shipping poor.

W. G. MILLARD, Agent pro tem.
58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, Dec. 2, 1918.
No meeting. Shipping and prospects fair.

H. L. PETTERSON, Agent.
2016 North 30th St. Tel. Main 808.

Seattle Agency, Dec. 2, 1918.
Shipping medium.

P. B. GILL, Agent.
84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, Dec. 2, 1918.
Shipping fair; few members around.

ED. ROSENBERG, Agent.
P. O. Box 280. Tel. Main 557.

Portland Agency, Dec. 2, 1918.
Shipping medium; prospects fair.

JACK ROSEN, Agent.
88½ Third Street. Tel. Main 6013.

San Pedro Agency, Dec. 2, 1918.
Shipping good; members scarce.

HARRY OHLSON, Agent.
128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, Nov. 25, 1918.
Shipping good; prospects fair.

JACK EDWARDSON, Agent pro tem.
P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Dec. 5, 1918.
Regular weekly meeting was called to order at 7 p. m., Eugene Burke in the chair. Secretary reported shipping quiet; plenty of members ashore. Balloting on officers for the ensuing term and delegates to the International Seamen's Union Convention was proceeded with.

EUGENE STEIDLE, Secretary.
42 Market Street. Phone Kearny 5955.

Seattle Agency, Nov. 29, 1918.
Shipping good.

LEONARD NORKGAUER, Agent.
Grand Trunk Dock, Rooms 203, P. O. Box 214. Phone Main 2233.

San Pedro Agency, Nov. 27, 1918.
No meeting. Shipping fair; few members ashore.

HARRY POTHOFF, Agent.
Sepulveda Bldg., 128½ 6th St. Phone Home 115; Sunset 66 W.

DIED.

Charles Dunkel, No. 937, a native of Germany, age 28. Died at San Francisco, Cal., Dec. 2, 1918.

Erwin Hertig, No. 2738, a native of California, age 19. Died at Shanghai, China, Oct. 24, 1918.

Rudolph Randa, No. 1083, a native of Finland, age 27. Died at Seattle, Wash., Dec. 1, 1918.

Search of outgoing vessels and passengers' baggage and the censorship of phonograph records and motion picture films marked for export has been discontinued at San Francisco by order of John O. Davis, Collector of Customs. The order has no effect on the customs regulations covering the search of incoming vessels and passengers' effects.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Two events of the first importance to American labor have marked this week in the national capital. The first is the wide circulation and discussion of "Labor's Fourteen Points," the platform of the new Independent Labor Party launched by the Chicago Federation of Labor, with the anticipated decision of professional politicians to try to divide the labor movement as soon as possible upon that issue. The second is the decision of President Wilson to include no representative of organized labor in his official peace delegation.

As an immediate result of the action taken by the Chicago Federation of Labor to organize a nation-wide political party upon the foundation of the labor movement itself, and in support of a modern platform of industrial democracy, the old policy of the American Federation of Labor as to political methods is thrown into the discard. Henceforth labor names its own candidates, from the bottom up, and labor loyalty is measured by the support given those candidates and the program of industrial democracy for which they stand.

As an immediate result of the failure of the White House to send even one labor spokesman to the official peace conference, the executive council of the A. F. of L. has issued its call for a world-wide labor conference in Paris at the same time as the peace conference, and has named President Gompers and Vice-Presidents Duncan, Alpine, Duffy and Green to represent the Federation there.

These two events are closely related. President Fitzpatrick and Secretary Nockels of the Chicago Federation of Labor have been working in the closest harmony with Frank P. Walsh and Victor Olander of the National War Labor Board. They have been responsible for a great deal of the success of the Board in dealing with hundreds of thousands of discontented workers during the critical period of the war. They deliberately announced to the country a political and economic and industrial program, contained in "Labor's Fourteen Points," that is in substance very much like the program "Labor and the New Social Order," issued by the British Labor Party as its own charter of new liberties. At the time that President Wilson was debating in his mind the naming of a labor man—presumably Samuel Gompers—to be one of the official peace delegation, the American labor movement was confronted with this Chicago program which called for entirely different methods than those used by Mr. Gompers. This was evidence that the Gompers doctrines, challenged by all of the powerful labor movements abroad, must defend itself at home, too.

Point 13 in the Chicago program reads: "Representation of the workers, in proportion to their numbers in the armies, navies and workshops of the world, at the peace conference and upon whatever international tribunals may result therefrom, with the labor of this nation represented by the President of the American Federation of Labor and such other delegates as the workers may democratically designate."

In other words, if the American labor movement is to be represented at the peace conference, let Samuel Gompers be one delegate and let others be elected by a referendum vote of all the membership of the unions in the A. F. of L.

But the President of the United States decided that he wanted only a few delegates, and none chosen by any class. He took men who had never been in the working class, and will never understand the workers—three lawyers, all of them men of wealth and born of wealthy families. They are honest, patriotic Americans, but the America they think of is the America we knew before the war—an America of millionaires and middle class and working class—rather than a future America of industrial democracy.

Guessing that something of this sort would happen, the Chicago Federation of Labor statesmanship wrote this as Point 14:

"Supplementing the League of Nations, and to make that instrument of international democracy vitally effective for humanity, a league of workers of all nations, pledged and organized to enforce the destruction of autocracy, militarism and economic imperialism throughout the world, and to bring about world-wide disarmament and open diplomacy, to the end that there shall be no more kings and no more wars."

That is the summons for an international of all the workers, to establish industrial democracy in place of commercial imperialism, under a Workers' League of Peoples.

Such a league will be organized when the delegates of the great labor movements of the world shall meet in Paris, during the peace conference. It will be a force more powerful than the Inter-Allied command under Marshal Foch, and more significant than any alliance ever made by kings. There is no chance of its failure, since the Inter-Allied Socialist and Labor Conference at London, at which Mr. Gompers was present some months ago, made the preliminary arrangements for it.

This Chicago program, then, points the way to a world-wide labor alliance as well as to city, State and national action by and for the workers. Its industrial planks are to be found outlined in the principles of the National War Labor Board, and its demands in the fields of national finance, public ownership, education, reconstruction and social insurance are most of them to be found not only in the program of the British Labor Party but in the decisions and speeches of Frank Walsh, the speeches of Frank Morrison, Secretary Wilson and Louis F. Post, and other sources fully endorsed by the labor movement of this country.

Democratic and Republican national campaign managers are trying to guess how far this "bolshevik stuff"—for every suggestion that is not reactionary these days is promptly branded bolshevik by the mentally and morally lazy—is going to be endorsed. They know that every national and international union, and every city and State central labor body has received a copy of the Chicago program. They know that in every one of the central labor bodies, if not in the headquarters of all of the national or international unions, there is someone who will draw up a resolution endorsing "Labor's Fourteen Points." But the question is, can't they organize an opposition within the labor movement that will break up this endorsement. "Divide and conquer," the ancient motto of kings, is their policy now. So the delegates in central labor councils or State Federation of Labor conventions who get up to ask for endorsement of this program must expect to have somebody jump up and call the Fitzpatrick-Nockels program "bolshevik" or worse.

Too much is at stake, for the old political crowd and for the class enemies of industrial democracy, to let the American labor movement demand proportional representation for labor in the government of the nation and the running of the industries.

An Independent Labor Party, with a program of rule by the actual majority!

Has the Chicago Federation of Labor asked for too much?

THE CONVERSION OF TAFT.

Smiles are scarce in war time, but here is one:

We once had a President by the name of Taft, a fine old Bourbon reactionary. He had a chance to pack the Supreme Court, and he fixed it for a generation so that no humanitarian ideas should be able to make a dent in its armor. Among the recent reactionary decisions of this court was one to the effect that no law could be passed forbidding a concern to require its employees to sign pledges not to join a labor union. But then came the war, and our fine old Bourbon ex-President fell into a panic over the labor situation, and attached himself to the coat-tails of a wild-eyed, howling radical by the name of Frank Walsh, and is now letting himself be towed all over the country, handing down decisions in favor of labor unions. They came to the plant of the Smith & Wesson Arms Company, whose managers were taking their stand on their right to exclude labor unions, as guaranteed by ex-President Taft's armor-plated Supreme Court. And ex-President Taft joined with Frank Walsh in forbidding them to do it! And when they persisted in doing it, ex-President Taft appealed to the President, who punished the Smith & Wesson Arms Company for standing upon its constitutional rights by taking over its plant, lock, stock and barrel!

It is bad enough to have to eat one's own words; how much worse to have to eat the decisions of one's own Supreme Court!—Upton Sinclair's Magazine.

FACTS ABOUT SUGAR.

The total sugar consumption in the United States for the fiscal year 1917-18 was 8,218,582,000 pounds. In Great Britain the total consumption for 1916 amounted to 3,131,198,000 pounds. In France for the same period it was 1,141,242,000 pounds; in Italy, 553,906,000 pounds; while in Canada for the year ending March 31, 1917, the total amount of sugar consumed was 704,400,000 pounds.

The wholesale cost of sugar per 100 pounds on May 1 was $8.07 in Canada, $12.59 in England, $12.28 in France, and $26.30 in Italy, as compared with $7.30 in this country. The average wholesale cost per 100 pounds in the allied countries was $12.52¼, so that if the United States had paid the same price for sugar as that paid by the allied countries our national sugar bill would have been increased by $429,419,864.50.

In Sweden sugar is now selling at 14 cents a pound, Spain at 19 cents, Brazil at 25 cents, Portugal at 21.4 cents, and India at 14 cents.

THE RED REVOLUTION.

Sir Eric Geddes, First Lord of the British Admiralty, declared it as his belief that the German fleet was ordered out for a naval Armageddon. It was certainly not very Prussian-like to let the war come to an end without throwing in that array of battleships which, next to the army, had been Germany's pride for a dozen years. But a navy does not consist merely of ships and guns. The human element refused its response. Inaction for four years, except for the desperate and hated adventures in U-boats, had brought the German sailors to understand their relation to their country. The mutiny of last year at Kiel, following the seeming triumph of socialistic republicanism in Russia, was the first omen. Then the strange spectacle of Prussian battleships flying the red flag was displayed to the world. Naval discipline is presumably the most effective and unbreakable of all. Reinforced by the Prussian grip, it might be expected to send sailors out grimly and unquestioningly to their destruction. A naval revolt is the surest sign that the fabric of militaristic control has been torn to shreds. Now, in every German city of industrial importance, the red flag is flying. Russia is indeed having her revenge. What the outcome will be be no man can tell. Continental Socialists are the master doctrinaires of the world. A new order is for them to be attained only by revolution, by a violent seizure of power. The usual conception of class war is supplemented by the bitterness that comes of political oppression. Nothing could be more futile and destructive at the present moment than the declaration of a general strike. But this is a part of the formula. The general strike has always been thought a necessary step to the revolution that would bring the transformation. Everything depends upon whether the educated masses have a capacity for self-control and concerted action that the Russians lack. It is to be hoped that they can hear the words of President Wilson: "The peoples who have just come out from under the yoke of arbitrary government and who are now coming at last into their freedom will never find the treasures of liberty they are in search of if they look for them by the light of the torch."—The Public.

TEXTBOOKS IN CITIZENSHIP.

Textbooks in citizenship for aliens, in which are included not only many important facts regarding the Government of the United States, but a great amount of information of value in the home and in business life, have been prepared by Raymond F. Crist, Deputy Commissioner of Naturalization, in the United States Department of Labor.

The schools of the Nation will be intrusted with the task of giving instruction in citizenship to the great numbers of foreign-born residents of this country, and the textbook prepared by Mr. Crist, with the aid of the teachers of citizenship classes, is designed to fit aliens to fill useful places in the life of the community and to fulfill loyally their duties to the land of their adoption.

The book, an attractive little work durably bound in a flexible cover, is arranged to serve not only as a textbook of government and an exposition of American ideals, but to assist in the education of the student in the English language. The first new lessons are prepared in a way to suggest to the teacher methods of drill for classes more or less deficient in knowledge of English.

The machinery, methods, and theory of government are then discussed; the Constitution and the Declaration of Independence are reprinted as the foundations of American liberties, and the various ways in which the Government touches the citizen in his daily life—through the postoffice and other agencies—are described fully. The Bureau of Naturalization makes no attempt to induce foreigners to become citizens, but it offers every facility in its power to those who are desirous of making America their home, and aims not only to instruct them in their rights, duties, and privileges under the American law, but also in American manners and customs, which may differ from practices in their native lands. A highly important development of this work has been the recent establishment of information bureaus for aliens, where foreigners may obtain without charge information on almost any conceivable subject.

The object of the Bureau of Naturalization in all its activities is to make the alien feel that America is friendly to him and that the Government seeks to aid him in his work and in his home life. The textbook is being prepared in large numbers for distribution among the foreign-born, but it does not become the property of the student until he has attained American citizenship.

UTAH'S TIMBER LANDS.

The vast timber supply of the Kaibab forest, estimated at 9,000,000,000 board feet, will be made available for Utah if plans formulated by Governor Bamberger for the construction of a railroad into the forest reserve are consummated. Governor Bamberger plans to take the matter up shortly with the United States Railroad Administration and enlist the aid of Director-General McAdoo in carrying out the project.

After traveling through the forest, Governor Bamberger has reached the conclusion that the estimate of 9,000,000,000 board feet of timber is conservative, and that the forest will produce even more. The Kaibab forest holds sufficient timber to supply the entire Southwestern territory, it is believed. It is one of the largest bodies of standing timber in the United States and is now inaccessible to market, the nearest railroad connection being 200 miles distant.

The construction of a railroad into the Baibab forest will serve a two-fold purpose. Not only will it open up the vast timber resources to Utah, but it will serve also in connection with the reclamation of 4,000,000 acres of virgin land in the Colorado River Basin and open vast acres to cultivation. The road into the Kaibab will be essential to the hauling of supplies and material to be used in connection with the reclamation project.

It is hardly possible that the Kaibab road will be constructed until after the war. Since it would take at least a year to complete the railroad, the timber to be obtained would not be accessible to shipyards as a war emergency measure.

Governor Bamberger will ask the Government shortly to reopen the old case of disputed territory, lying in Arizona, which Utah claims. He will ask that the part of Arizona north of the Grand Canyon, comprising Cooconino and Mohave counties, be given to Utah. The adjustment of the matter favorably to Utah probably will depend upon an act of Congress and the consent of Arizona.

HOLD YOUR LIBERTY BONDS.

Of the many millions of acres of public lands the title of which is in the Federal Government, the United States owns some 53,000,000 acres of coal lands.

To exchange a United States Liberty bond for stock in a coal company of doubtful value is not sound finance. Safety first is a good business motto for Liberty bond holders.

Out of a list of 505 secondary schools and colleges in the United States which put out German from their curricula, 400 introduced Spanish in its stead. In most of the high schools in the larger cities of the country Spanish stands on an equal footing with French. In the Boston high schools Spanish has been made compulsory.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER

(Continued from Page 3.)

munities described show a type of social life that, the report says, can "unfortunately be matched in many places."

In searching for social factors which make for the child's sound development, the investigation looked first to the district school with its honored tradition of useful service. The report shows how "pitifully inadequate" the tiny educational unit in the back country, with its isolation and slight equipment, usually is to meet modern demands.

More Employees Under U. S.

The United States Railroad Administration, through its board of wages and working conditions, will hereafter control wages, service and working conditions of express employees, according to information received by President Tobin of the Brotherhood of Teamsters, Chauffeurs and Helpers, and President Forrester of the Brotherhood of Railway Clerks. These trade union executives were notified that they must first take up grievances with officials of the express companies and they asked Director General of Railroads McAdoo to permit them to appeal direct to his board, rather than confer with the companies. The director general has agreed to this plan, and an order has been issued to this effect.

Messrs. Tobin and Forrester are now organizing these employees. The A. F. of L. acknowledges the jurisdiction of the two brotherhoods, which are confronted by numerous little company movements and fraternal associations, promoted and encouraged by express officials in an effort to check the growth of bona fide trade unionism.

Women on Cars Not Needed.

The Chamber of Commerce of Cleveland, Ohio, and other employing interests do not like the decision of Federal mediators that there is no occasion to employ women on street cars in this city. The decision sustains the men that there are sufficient male workers if the company would employ them and be less interested in destroying labor standards. The Chamber of Commerce refuses to be comforted, despite this statement by Secretary of Labor Wilson, answering a query why the mediators opposed women conductors:

"The agents visited the company's employment office and in one day fifty men and twenty-five women sought employment; thirteen men and twenty-three women were permitted to file application papers. Since January the Cleveland employment office has had 13,500 more applications for jobs than the requests for employees; 500 men applied daily the first three days of each week to the Cleveland employment office for jobs. The street car company has not applied for men to the employment service."

Pension Plan Would Pay.

In urging the United States Senate to pass his retirement bill for aged Government employees, Senator McKellar showed his colleagues that aside from the elemental justice involved, the plan would be a paying project for Uncle Sam.

"It is estimated," said the lawmaker, "that there are 7500 of these superannuated employees and that 4000 are absolutely useless to the Government. The proof before our committee showed that these are men and women who have been longest in service. It is estimated that 4000 of them are absolutely doing no service to the Government at all, and probably the salary of each one would amount to about $1,500. There are $6,000,000 that are being paid out toward these 4000 superannuated employees for which the Government gets no return at all, and there are 3500 left from which the Government gets only a partial return, and that will probably make nearly as great a saving as the amount the Government will ever have to pay out. In other words, the bill not only provides for the benefit of the employees, but it will benefit the Government by increased efficiency and in saving the large salaries now paid to superannuated employees."

Wage Reduction Plan "Too Hot to Handle."

William H. Barr has found that his wage reduction and long-hour plan is, to use a baseball term, "too hot to handle."

Mr. Barr is president of the National Founders' Association. At the opening session of the annual convention he orated at length on his method to meet foreign competition. He referred to wage reductions as "liquidating wages." It was the old, old scarecrow, which President Gompers quickly took a shot at. President Barr is now trying to let loose. And he's angry at the A. F. of L. executive, who is charged "with misinterpreting the spirit and intent" of his wage liquidation scheme.

Mr. Barr has now reached the explanation stage.

"Unquestionably," he says, "the manufacturer is more deeply concerned in working out the great common industrial problems than are those individuals and organizations whose principal efforts are confined to vituperation and reduction of output.

"If our manufacturers can maintain their industries and furnish employment to all classes of workers on an eight-hour basis the situation would be welcome. Otherwise, the result would be a common calamity, with the worker the chief sufferer." The same general principles applied to wages, he asserted.

A careful reading of the above statement shows that the iron founder has changed his tactics, but not his views.

It is whispered that certain far-sighted employers have voted Mr. Barr as eligible to the "mutt" class.

Keep Away From Agents.

In collecting claims under the War Risk Insurance Act dependents and beneficiaries of officers and men should keep away from agents and unauthorized lawyers is the warning issued by the War Department. The Bureau of War Risk Insurance of the Treasury Department arranges all such matters and settles all claims without charge. Outside agents who impose upon claimants are subject to severe punishment.

Any legal advice that a claimant believes is necessary can be secured through the co-operaton of the special committee for war service of the American Bar Association through the local legal Advisory Boards of each draft district.

SURRENDER OF GERMAN FLEET.

(Continued from Page 2.)

wonderful naval assembly had reached a point determined upon for anchorage.

A number of ships remained for guard, and the rest went farther up the Forth. With the day's great business accomplished, all the battleships of the Grand Fleet filed past the Queen Elizabeth and cheered the admiral. The latter a little later signaled this historic order: "The German flag will be hauled down at sunset today and will not be hoisted again without permission." Later he signaled: "It is my intention to hold a service of thanksgiving at 6 o'clock to-day for the victory which Almighty God has vouchsafed His Majesty's arms and every ship is recommended to do the same."

In the dark, British naval officers boarded the German ships for a preliminary inspection. They reported afterward that the German officers seemed intensely depressed, but were quite courteous, that the ships were not as clean as they might have been, and that there were signs of want of discipline aboard. On the other hand, all the conditions imposed by the Allies as to the unmanning of the vessels and their being brought in a defenseless state, appeared to have been scrupulously performed. In many cases the breech locks of the big guns had been removed and left behind at Wilheimshaven. It might here be noted that when the Grand Fleet steamed out to meet the Germans it was ready in every detail for instant action, if it had been necessary.

After further inspection has been made, the German ships will be taken north to Scapa Flow in the Orkneys for internment, and the crews will be sent home by transport.

PACIFIC MARINE ITEMS.

The steamer "Benito Juarez," which sailed from San Francisco for Manila via Honolulu, Nov. 22, foundered forty miles off Molokai channel, H. T., on Dec. 3, and seven of the crew were lost, according to the cable advices received from Lanai, Hawaiian Islands. Those lost were: Second Assistant Engineer Charles Byrne, native of Ireland, address unknown, and six Chinese members of the crew, names unknown. Only meager details of the disaster have been received from Captain O. F. Danzog, who made the coast of Lanai in a small boat. It is known that the vessel was lost during the same hurricane that ravaged a number of plantations and wrecked small fishing boats. The "Benito Juarez" was formerly a Mexican steamer, 364 deadweight tons and built in 1896 in England. She was purchased by Compania Naviera from Frank Lynch through Welch, Fairchild & Co. of San Francisco, and left this port with a Government cargo for Manila. The new owners had arranged to place the craft in the interisland service.

The University of California announces three extension courses for men who aim at the higher positions in either the United States Navy or the United States Merchant Marine. These courses are to be given in the San Francisco Ferry building. One course is entitled "Navigation and Nautical Astronomy" and is to be held every day in the week excepting Saturday and Sunday from 1 to 4 p. m. The second course will be held from 9 a. m. to noon on the same days and will cover seamanship, including rules of the road, laws of storms, international code of flags, signaling, and the like. The third course of value alike to business men and prospective merchant marine officers will be given by Dr. Leslie J. Ayer on the subject of "Business Law." These lectures will be given every Tuesday from 7 to 8 p. m. Applications should be made at once at the University Extension office, 599 Market street, San Francisco, Calif.

Musher & Co. of New York, the largest importers of olive oil in this country, plan the immediate construction of a $110,000 cannery and olive oil distributing plant on the San Diego water front. Announcement of this was made by John Buerkle, Pacific Coast manager of the New York firm. Buerkle declared that large glass-lined storage tanks will be erected. Ships laden with olive oil will be sent to San Diego direct from Marseilles, Genoa and Barcelona. The oil will then be distributed from that port to various points on the Pacific Coast. In addition to the olive oil storage plant Musher & Co will construct a modern cannery for the packing of tuna, sardines, yellowtail, lobsters and other sea food. The firm will also deal extensively in salted fish brought from the lower California coast. The firm has extensive olive oil storage depots at Marseilles, France, and at Tortosa, Spain.

Astoria harbor facility improvements that will entail an estimated expenditure of approximately $1,500,000 have been authorized by the Port of Astoria Commission. The projects include the construction of a concrete floating drydock of 15,000 tons capacity, and the erection of a third pier at the port dock.

AID FOR THE FOREIGN BORN.

Uncle Sam is now going to furnish information bureaus for his nephews and nieces.

Primarily, these bureaus will be for nephews and nieces by adoption, for they are intended as a part of the great scheme of Americanization now being worked out for the aliens living in America, to provide first-aid for immigrants in any of the thousand and one crises of life in a strange land.

It is unfortunately true that a feeling has prevailed among certain classes in the past that immigrants exist solely to be exploited and deceived. The ignorance of American customs so general among those in foreign quarters, their tendency to trust strangers and the readiness of sharpers to prey upon them, all combine to make their lot anything but pleasant until they have learned through long and costly experience.

In many stores of shady reputation it is the regular practice to overcharge the immigrant. Lawyers of the shyster class charge him exorbitant fees for little or no service, and "runners" exploit him wherever possible. Fly-by-night "bankers" open establishments in foreign quarters, where they offer to send remittances home to the families of men working here. Some of them never send anything back at all; large numbers charge from twice to ten times what the service would cost if the immigrant knew where to go.

Even in the event of sickness and death the immigrant is exploited, if he is so unfortunate as to find an unscrupulous physician or undertaker. It is too often the rule that native-born citizens pay little attention to the desires and needs of the immigrant, and the consequence is that he frequently becomes much disappointed with his career in America.

To remedy this whole situation is the aim of the Commissioner of Naturalization, whose bureau is a part of the Department of Labor. To show Americans their responsibility to the foreign born, and to show immigrants how they can become not only Americans in legal form but thoroughly imbued with the spirit of Americanism, is the aim of the information service planned for the various cities.

Posters, moving pictures, the press, in fact every avenue through which the immigrant can be approached, will be utilized to reach him. He will be taught, in his own language and in English alike, that the United States wants to help him; that he has only to make his wants known to be assured of aid.

The information offices will help immigrants in bringing their families to America, in recovering money of which they are robbed through fraud, and in other ways assisting to make life in America pleasant and profitable. Immigrants will be encouraged to ask questions whenever they are in doubt about their course or when emergencies arise.

Do not be deceived when a merchant tells you that goods bearing the union label cost more than those without. If this is true it is for the reason that the union manufacturer pays better wages to his union men than is paid to non-union men.

DRIFTING ON AN ICE-FLOE.

The most dramatic part of the work of the Arctic explorer, Stefansson, is now in progress, although Stefansson himself was unable to be with it because of the attack of typhoid and pneumonia which he suffered last winter. This new venture is the attempted voyage of five of his followers on a floating ice cake "over the top" of the earth from a point north of Alaska to the north Siberian coast, from which they expect to make their way next spring to the Siberian Railroad.

Stefansson's followers, who hope to ride an ice cake over the summit of the planet, expect to feed themselves on the seals they kill on the edges of their big natural barge of ice.

Mr. Stefansson told of the project recently as follows:

"Five men are still behind, engaged in the most dramatic and one of the most important adventures which has ever taken place in the Arctic. Nansen was the first man that ever thought about drifting across the Polar Basin. He went into the ice north of Siberia, near the New Siberia Islands, and drifted in a general northwesterly direction, then westerly and finally southwest, his ship coming out after three years in the vicinity of Spitzbergen.

"Another vessel had done a similar thing involuntarily more than a decade earlier. The 'Jeannette,' bearing an American expedition, commanded by Lieutenant De Long of the American Navy, froze into the ice north of the Bering Straits and drifted northwesterly until crushed after two years in the vicinity where Nansen deliberately put his vessel into the ice a few years later.

"In August, 1913, the 'Karluk' of the Canadian-Arctic expedition, also commenced an involuntarily drift. Frozen in the mouth of the MacKenzie River and twenty miles north of Alaska she drifted west and northwest until in January, 1914, she was crushed in the vicinity of where the "Jeannette" long before had entered the ice.

"If the course of these three vessels were plotted on the same chart they would make a continuous line," Mr. Stefansson continued. "In other words, the "Karluk," had she not been crushed, would have duplicated, first, the drift of the "Jeannette," and later the drift of the "Fram," eventually emerging after four or five years in the vicinity of Spitzbergen."

It is estimated that the Bureau of Biological Survey of the United States Department of Agriculture is saving annually over $5,000,000 worth of livestock for the ranchers of the Rocky Mountain section as a result of its intensive campaign against predatory animals, which has been in progress during the last three years. During this period 60,485 coyotes, 8085 bobcats, 1829 wolves, 201 mountain lions, and 137 bears have been trapped or shot, and many other animals have been poisoned. The income from the sale of pelts of animals killed by Government hunters to protect livestock during the last year will aggregate approximately $100,000.

Much of the asseveration that the unions should go into politics means merely that the members thereof, or certain of these, should go into office.

Labor News

John P. White, director of the Bureau of Labor of the United States Fuel Administration, has resigned. When this country entered the war Mr. White resigned the office of president of the United Mine Workers of America to accept the position he now retires from.

The 3000 organized flat janitors in Chicago have asked building owning associations to confer with them that wages may be increased the first of next year. Before the war these workers signed a contract that does not expire until January, 1919, and they have carried out that contract regardless of the increased cost of living

Mr. C. T. Clayton, director training and dilution service, Department of Labor, is getting in touch with trade and labor journals in order to extend the usefulness of his department. The purposes of this service are: To ascertain the methods used in various plants for training workers; to supply information on the subject to these plants and to promote such training wherever it is necessary or desirable, and to inspect the operation of such training and to cooperate with the U. S. employment service and other services of the Government.

A trade unionist placed in charge of a struck railroad is the experience of Val Fitzpatrick, representative of the Brotherhood of Railroad Trainmen. The Atlanta (Ga.) joint terminals, which handles the freight business of that city, was tied up because trainmen, switchmen, engineers and clerks suspended work as a protest against the petty tyrannies of the superintendent and his assistant. Fitzpatrick conferred with the terminal officials and it was agreed that the men return to work and he take charge of the joint terminals and operate same until a satisfactory adjustment could be reached.

A bill has been introduced in the United States Senate providing for a tax of 10 per cent. on the net profits of persons employing child labor within prohibited ages in addition to all other taxes. The theory of this legislation is indorsed by child labor opponents who have been studying methods to evade the decision of the United States Supreme Court when it invalidated the Federal Child Labor law last summer, that Congress can not bar child labor products from interstate commerce. The new legislation is based on the theory that the court will hold that Congress has the right to regulate this commerce.

While employers are talking about wage reductions the cost of living continues upward, according to the United States Bureau of Labor statistics. In a report just issued it is stated that August, 1918, retail prices for food increased 2 per cent. over the previous month, and prices for August, this year, advanced 15 per cent. over August, last year. For the five-year period, August 15, 1913, to August 15, 1918, food prices advanced 70 per cent. All the seventeen articles for which prices have been obtained for five years show increases of 52 per cent. and over. Four articles increased over 100 per cent., as follows: Corn meal, 127 per cent.; lard and flour, 106 per cent. each, and potatoes, 105 per cent.

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

The GREATEST MOTHER *in the* WORLD
holds a sacred place of honor within our homes and in our hearts

THE message that the American people stand as one behind our brave boys and gallant Allies, is the most cheerful "Merry Christmas" we can send them.

Let us make this a Red Cross Christmas—let us see to it that every member of every family joins the Red Cross. She is warming thousands, feeding thousands, healing thousands from her store—the greatest Mother in the World.

All you need is a Heart and a Dollar
RED CROSS CHRISTMAS ROLL CALL
December 16—23

THE SAILORS' UNION OF THE PACIFIC

Home News

Government officials estimate that war losses of this country will approximate 100,000. This includes the men killed in action, wounded, died of disease, accidents and missing. It is believed that it will be several weeks before the complete list of casualties can be compiled.

The school lands of South Dakota that came under a law at the organization of the State prohibiting their sale for less than ten dollars per acre, have netted the school fund $17,767,000, which provides the State with an income of $6.73 for each child of school age.

The United Farmers of Ontario are undertaking to buy up all the cheese factories in the Province, and put the business on a scientific co-operative basis. The United Farmers Co-operative Company is reported to have done a large and profitable business, resulting in great saving to the farmers.

The unorganized territory in the State of Maine amounts to 15,000 square miles, or 47 per cent. of the total area. There are no local officials in this territory, which contains all manner of settlements from hunting lodges to summer hotels. Business is done with the State officers.

Dr. William C. Gorgas, who recently retired as Surgeon-General of the United States Army, will resume as director of yellow fever work for the Rockefeller Foundation the work which he temporarily relinquished when this country entered the war. He will sail shortly for South and Central America to direct operations there.

Representative Carter Glass of Virginia was nominated by President Wilson to be Secretary of the Treasury. Glass will go into office on December 16, under an agreement with Secretary McAdoo, whose resignation was accepted by the President to take effect upon the appointment and qualification of his successor.

General March, chief of staff, United States army, announces that the total casualities from all sources in the American expeditionary forces up to the signing of the armistice were 296,117, divided as follows: Killed and died of wounds, 36,154; died of disease, 14,811; died from other causes, 2,204; wounded, 179,625; prisoners, 2,163; missing, 1160.

A campaign for the election of General John J. Pershing, commander-in-chief of the American expeditionary forces in France, to the Presidency in 1920 was formally launched in Ohio by an application to the Secretary of State for the incorporation of the Pershing Republican League. Former United States Senator Charles Dick, Akron, and fourteen other prominent Republicans of Akron and Summit county are sponsors for the movement.

The United States Fuel Administration announces that since the signing of the armistice fuel regulations have been altered in only two cases. Warning is given that Government supervision of fuel will continue until the peace treaty is signed. A coal curtailment of 50 per cent. on the manufacture of building material, including brick, cement, lime and tile, has been removed to coincide with the program of the war industries board to lift the ban on building material industry.

BUY WAR SAVINGS STAMPS

Domestic and Naval

The offer of the United States Government to purchase the 720,000 gross tons of ships of the International Mercantile Marine Company that fly the British flag is understood to have been accepted by the company.

The National Shipbuilding Corporation, of New York, announces the receipt of contracts for ten 1500-ton self-propelling barges for the French Government. Construction of a six-way plant at Three Rivers, Quebec, also has been begun by the company.

The British steamship "Twilight" of 3100 tons gross, 1994 net, built at West Hartlepool in 1905 and owned by the Portloe Steamship Company (W. E. Hinde, manager), Cardiff, has been sold to Messrs. William Thomson & Co., Leith, for £85,000. She carries about 5160 tons deadweight and was sold in 1915 for £30,000.

Some of the auxiliary craft bought by the Navy for use in combating the submarine menace are to be turned over to the Department of Commerce. About a dozen of these craft will be used by the Coast and Geodetic Survey, the Lighthouse Bureau and the Bureau of Fisheries, and others will be transferred to the Coast Guard for duty as cutters.

The following contracts are reported to have been placed by the Emergency Fleet Corporation: Elliot Bay Shipbuilding Company, Seattle, five 3500-ton barges; Johnson Shipyards Corporation, Marine Harbor, New York, six 2500-ton barges; Northwestern Shipyards, Green Bay, Wis., twenty-one seagoing tugs, delivery on or before October 1, 1919; cost about $4,400,000; Langell Bros., St. Clair, New York, four seagoing tugs and three barges.

Suit against the United States Government for $4,154,500 has been brought by Luckenbach Steamship Company, incorporated, of New York, on account of seventeen steam tugs and barges appraised at $1,500,000 and taken over for war purposes under the Shipping Act of June 15, 1917. The sum claimed represents the difference between 75 per cent. of appraised value, paid to plaintiff under the provisions of the act, and the sum of $5,279,500, which plaintiff claims to have been the market value of the vessels when they were taken over in the fall of 1917.

Because of the lack of sufficient shipping to handle the petroleum from the Tampico and Tuxpam districts, the managers of several of the Mexican oil companies are negotiating with the Constitutionalists Railways of Mexico with the object of engaging on a large scale in the exportation of oil by rail to the United States by way of Monterey and Laredo, to which points there is direct rail connection with the oil fields. In case satisfactory arrangements can be made, the necessary tank cars will be obtained in the United States. At present the available shipping does not suffice to handle one-tenth of the present potential supply from producing wells, while new ones are being continually brought in which add greatly to the total amount awaiting shipping facilities.

The Public
A Journal of Democracy
Poverty is A Crime!
IT isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was
"The Crime of Poverty"
It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.
Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.
Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."
THE PUBLIC
122 E. 37th St., New York City

INFORMATION WANTED.

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S. "Davy," is inquired for by his mother. Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal. 11-6-18

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City. 6-5-18

Hans Herman Hansen, a native of Bornholm, Denmark, about 30 years of age, last seen at San Francisco, Cal., in 1914, is inquired for. Any one knowing his whereabouts please notify his sister, Mrs. Marcher; address, Modesto, Cal. 3-20-18

News from Abroad

The British Government, according to press dispatches, has agreed to turn over to the French Government about 400,000 tons of new tonnage within the next few months.

Official announcement made in London placed the total losses in merchant tonnage by enemy action and marine risk from the beginning of the war to the end of October, 1918, at 15,053,786 gross tons.

A treaty between Great Britain and Peru, concluded at Lima creating a permanent commission for the adjustment of differences that may arise between the two countries, was announced to the House of Commons by Lord Robert Cecil on October 23.

British merchant tonnage losses were 9,031,828 gross tons from the beginning of the war to October 31, 1918, according to an official statement just issued. New construction in the United Kingdom in the same period was 4,342,296; purchases abroad were 530,000 tons and enemy tonnage captured was 716,520. The net loss was 3,443,012 tons.

The government of the Loire Department, France, has appropriated 600,000 francs to be used to encourage agricultural enterprises and the repopulation of the farming districts. To encourage large families a part of the loan of 2000 francs will be cancelled for each child born after the farmer has taken possession of his allotment.

Speaking on the League of Nations, ex-Prime Minister Asquith said of the small nations that they "had still to confront the perils of infancy and early manhood," and that their growth must be guarded without in any way fettering their independence and free self-development. This, he thought, would be one of the most important duties of the League of Nations.

It is officially announced that during the war the forces of Great Britain actually lost nearly 1,000,000 men killed or dead through various causes. Recently it was stated that the British losses totaled 658,704, but this number did not take into consideration men who were reported missing, who actually lost their lives, but of whom there is no trace, nor did it account for men who died at the front from sickness.

Russia is in dire need of tools and implements, says R. C. Martens, a business man who has had large experience in that country. The people need tools with which to repair what implements they have; and in the spring they will need plows and other farm machinery, for which they will be glad to exchange hides, flax, bristles, furs and other native commodities. The people are not in need of charity, he says, but of business direction to bring order out of chaos.

Germany has now surrendered to the Allies and the United States to be held during the armistice the territory west of the Rhine, embracing 19,121 square miles and a population of 11,261,099, including 70 per cent. of the nation's mining products and 25 per cent. of its manufacturing industry. Alsace-Lorraine furnished 42,000,000 tons of the 49,000,000 tons of iron used by Germany a year. Without this territory, according to the iron masters of Dusseldorf, Germany could not have conducted the war three months.

BUY WAR SAVINGS STAMPS

With the Wits

"Doesn't peeling onions make you weep?" "No, but paying 20 cents a pound for 'em does."—Boston Transcript.

Nipp—That girl has a waist like a wasp. Tuck—Yes, and it takes a lot of experience to fool with it without getting stung.—Town Topics.

"I'm sorry I ever asked for his political views." "Why?" "I used to think well of him before I found that his opinions didn't agree with mine."—Detroit Free Press.

"Is the medicine you have for your rheumatism used internally or externally?" "Eternally, I guess. I've used nine bottles and it hasn't helped me yet."—Boston Transcript.

"Your money or your life," said the highwayman. "Mister," said the facetious victim, "you've got the wrong slogan. What you ought to say is 'work or fight.'"—Detroit Free Press.

"I understand that the young man in the house next to you is a finished cornetist." "Gee! Is he? I was just screwing up my courage to finish him myself. Who did it?"—Houston Post.

"Madam, I see you advertise table board." "I do." "But why specify table board? What other kind of board is there?" "Stable board. You ain't the first jackass that has been along."—Kansas City Journal.

"Could you let me have a dime?" asked the beggar. "I suppose," sneered the man, "you have a wife and ten children at home?" "No, mister," replied the beggar, "I am trying to raise money to pay the installment on my Liberty Bond."—Detroit Free Press.

"Got any sawdust biscuit?" asked the man in the Third Street grab lunch. "Sure," replied the waitress, who in reality was an heiress. "Well, gimme some of them, a couple of artificial eggs, a stack of straw cakes, a cup of chicory, and a side order of chemical potatoes. And I'll have some burlap pie. We've got to end this war somehow."—Milwaukee Free Press.

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

257 HANSFORD BLDG., 268 MARKET STREET

Under Capt. Christensen's personal and undivided supervision, pupils of this favorably known school are taught all up-to-date requirements for passing a successful examination before the U. S. Inspector.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 15. SAN FRANCISCO, WEDNESDAY, DECEMBER 18, 1918. Whole No. 2517.

RECONSTRUCTION AND THE PEOPLE.

The Need for Public Information Upon After-War Problems.

Why should not America follow the example of the English Reconstruction Ministry in Inaugurating Open Forum Education Among the People. This is a pertinent and timely question propounded by Mr. Carl Beck, Secretary of the Reconstruction Conference Committee, National Popular Government League, Washington, D. C.

Mr. Beck's own affirmative argument, which is published herewith, is an able plea for a translation of the spirit which was born out of self-sacrifice and travail of war, into a practical humanitarianism. It is a plea for a better world and an appeal for individual participation toward that end.

America has shared her wealth and has given the lives of her sons, along with the infinitely greater sacrifices of brother-peoples abroad, in order that the lives of these people might be made better and freer and more secure for self-development.

It is unthinkable that those who return from abroad glorified by the accomplishments of triumphant democracy shall find their home land less benefited, for example, than that of their English comrades by whose side they fought and sacrificed.

In our home land of America conditions must be made better, "free institutions" must be made to serve as they never served before those who by brain or by brawn toil and produce.

Work of British Reconstruction Ministry

The British Government is doing one thing so significant that it cannot fail to convince our returning soldiers that the Government itself is setting the example of how to get the people to think about conditions so that they themselves can come to intelligent, definite conclusions as to what kind of reconstruction they want.

We are indebted to Winston Churchill for a graphic picture of the English method. It ought to be widely known among the rank and file of the American public. In his latest book, "A Traveller in War Time," Churchill gives a glimpse of the British Reconstruction Ministry at work among the people.

From "A Traveller in War Time."

"'A lecturer is coming down from London to talk to the wounded in the amusement hall of the hospital,' our hostess informed us. 'And you both must come and speak, too.' The lecturer has not arrived. But the lady of the manor seated herself at the speaker's table, singling out Scotch wits in the audience, for whom she was more than a match, while the sculptor and I looked on and grinned.

"When at last the lecturer came, he sat down informally on the table with one foot hanging in the air and grinned too, at the bantering but complimentary introduction. It was then that I discovered for the first time that he was one of the best educational experts in that interesting branch of the British Government, the Department of Reconstruction, whose business it is to teach the convalescents the elements of social and political science.

"This was not to be a lecture, he told them, but a debate in which every man must take part. And his first startling question was this: 'Why should Mr. Lloyd George, instead of getting five thousand pounds a year for his services as Prime Minister, receive any more than a common laborer?'

"The question was a poser. The speaker folded his hands and beamed down at them. 'Now we mustn't be afraid of him just because he seems to be intelligent,' declared the hostess. This sally was greeted with spasmodic laughter. The prolonged silence did not seem in the least painful to the lecturer, who thrust his hands into his pocket and continued to beam. He had learned how to wait, and at last his patience was rewarded. A middle-aged soldier, with a very serious manner, arose hesitatingly, with encouraging noises from his comrades.

"'It's not Mr. Lloyd George I'm worrying about, sir,' he said, 'all I wants is enough for the missus and me. I had trouble to get that before the war.' Cries of 'Hear, Hear!'

"'Why did you have trouble?' inquired the lecturer, mildly.

"'The wages was too low.'

"'And why were the wages too low?'

"'You've got me there. I hadn't thought.'

"'But isn't it your business as a voter to think?' asked the lecturer. 'That's why the Government is sending me here, to start you thinking, to remind you that it is you soldiers who will have to take charge of this country and run it after the war is over. And you won't be able to do that unless you think and think straight.'

"'We've never been taught to think,' was the illuminating reply.

"'And if we do think, we've never been educated to express ourselves, same as you!' shouted another man.

"'I'm here to help you educate yourselves,' said the lecturer. 'But first let's hear any ideas you may have on the question I asked you.' There turned out to be plenty of ideas after all.

"As we walked homeward through the fog," continues Winston Churchill, "I talked to him of Professor Dewey's work and its results, while he explained to me the methods of the Reconstruction Department. 'Out of every audience like that we get a group and form a class,' he said. 'We have a great many classes already started, and we see to it that they are provided with text books and teachers.' 'Oh, it's not propaganda,' he added in answer to my inquiry. 'All we do is to give them facts in such a way as to make them able to draw their own conclusions and join any political party they choose, just so they join one intelligently.'"

Could there be a more thrilling illustration of the Forum and Reconstruction? of making a "free institution" serve toward bettering the life and conditions of the soldiers of the battlefield and of industry? England is making the education of adults the cornerstone of reconstruction. It is in recognition of the fact that such education is a preparation for intelligent citizenship. In the last analysis, the stability of reconstrutcion work in any country rests first on the understanding and then on the satisfaction of the great majority of citizens who will ultimately cast their vote, in approval or disapproval of any reconstruction program.

President Wilson, in "The New Freedom"

Let me quote something very pertinent here, from "The New Freedom," written by a man who has made himself the exponent of democratic thought the world over:

"One of the valuable lessons of my life," says Woodrow Wilson, "was due to the fact that at a comparatively early age in my experience as a public speaker I had the privilege of speaking in Cooper Union in New York. The audience in Cooper Union is made up of every kind of man and woman, from the poor devil who simply comes in to keep warm up to the man who has come in to take a serious part in the discussion of the evening. I want to tell you this, that in the questions that are asked there after the speech is over, the most penetrating questions that I have ever had addressed to me came from some of the men who were the least well dressed in the audience, came from the plain fellows, came from the fellows whose muscle is daily up against the whole struggle of life. They asked questions that went to the heart of the business and put me on my mettle to answer them. I felt as if those questions came as a voice out of life itself, not a voice out of any school less severe than the school of experience." President Wilson here illustrates a process of democracy in crystallizing public opinion for which the Government should have grave concern.

Government by Public Opinion

Apparently the British Reconstruction Ministry proceeds on the theory that democracy is government by public opinion. It does not organize classes of preachers of the pulpit, editorial writers, pleaders before the bar, nor of school masters, who in the past have reigned pre-eminently as the educated class whose power to express themselves has made their opinion count. Instead, the British Reconstruction Ministry send those who can produce the facts before a forum of citizens not so able in rhetoric, but very capable of arriving at an opinion on the thoughts and facts presented to them. That is crystallizing public opinion at the source. That is helping an intelligent expression of real public opinion on the basis of fact rather than as a consequence of prejudice. It is an admirable example of the impartial, scientific methods which govern-

ments may employ to great advantage without danger of political abuse. It is an application of the democracy for which the world has been made safe. It is, apparently, the basic process of reconstruction in England.

What is America's Reconstruction Basis?

We may well ask today what will be the basic Reconstruction program. Because England, France and Italy have their programs, it is not therefore to America's discredit that she has not yet formed hers. Our Country, the last to enter the war, concentrated on winning the war as the first step. Before preparations for winning the war were at an end, an early victory brought with it the need of reconstruction. This country will meet the problems of reconstruction as they come with the same energy and resourcefulness as she met the problems of the war. And as a part of that resourcefulness it is for American forums in assembly to help America educate herself for the task.

It is hoped that for this historic period there will be, to quote a recent editorial in the Washington Post, "clear-visioned and unselfish statesmanship" that will "be clean and strong and tall enough to look out above the fogs of party politics." With the editorial columns of ninety per cent. of the daily press taking a partisan position in politics; with such a malicious scramble for control of the Reconstruction Congress as we have just witnessed this fall; with the exhibition we are having today in Congress of an attempt to keep our President, the recognized leader of world democracy, from having any vital part in American reconstruction while he is actually at the same time the inspiration of world reconstruction—with all these circumstances, the hope of constructive statesmanship dwindles unless the people come to the rescue with an educational demand.

The demand should be this: Let our representatives in Congress digest reports and pass legislation; let the experts collect their data and report their results; let newspaper editorials exhort and criticise according to their political slant. But with all this overhead, let there be at the foundation of citizenship in every American community, an educational process on reconstruction encouraged by the government, among the people themselves. Let the Federal Government inaugurate a system of public information concerning reconstruction problems that would be impartial and scientific. If it was a sound principle for the government to supply facts through films, photographs, speakers and literature in order that there should be an intelligent public opinion concerning the war, is it not also sound that the Federal Government should move as quickly to start the people "thinking and thinking straight" on the facts of reconstruction?

If I know the three-hundred-odd forums that assemble in churches, theatres and school houses, and the scores of local labor assemblies, farmers' gatherings and commercial meetings, they would welcome co-operation and encouragement from the Government to take up reconstruction problems.

Upon whom should the thinking citizen and the home-coming soldier depend for impartial, scientific information concerning the Government operation of railroads, telephone and telegraph, express, and shipping, for instance? Of whom will he ask questions on points that are not made clear, or that are omitted entirely? Newspapers print Congressional debates and statements in part and occasionally in whole as news, but they have little time or space for questions and expressions from readers. Community and organization forums take time.

Speaking of the American people in his foreword to the book entitled "American Problems of Reconstruction," the Secretary of the Interior, Franklin K. Lane, says: "This, though, is true, that their judgment must be respected, and respected in time, if things are not to go further than they would wish themselves. And this lesson conservatives must learn: The sovereign citizen is here!"

Unless we follow the English example of getting before the citizens assembled, with reconstruction facts and programs, America will invite this danger: Reconstruction will be a program of "politicians" and not of the people. If we do follow the English example of reconstruction open forums, there will be an intelligent, understanding citizenship that will demand statesmanship instead of partisan politics, and which will support and inspire leaders broad and big enough to meet the demands of the times.

The right of workers to organize in trade unions and to bargain collectively through chosen representatives is recognized and affirmed. This right shall not be denied, abridged or interfered with by the employers in any manner whatsoever.

Employers should not discharge workers for membership in trade unions, nor for legitimate trade union activities.—Principles and Policies of the National War Labor Board.

MANLY SUCCEEDS WALSH.

The National War Labor Board authorizes the following statement:

President Wilson has accepted the resignation of Frank P. Walsh, joint chairman of the National War Labor Board, and has appointed Basil M. Manly as Mr. Walsh's successor. Announcement of the action was made by Mr. Walsh at the meeting of the board today. Mr. Manly has been assistant to the joint chairmen, Mr. Taft and Mr. Walsh.

While the appointment was made by the President, as was the appointment of the other members of the board, Mr. Manly, like Mr. Walsh, was chosen for the place by unanimous vote of the representatives of labor on the War Labor Board. Five members of the board represent and were chosen by employers; five represent labor; and the chairmen, representing the public, are selected, one by labor and one by the employers.

William Harmon Black, Mr. Walsh's alternate on the board, resigned with Mr. Walsh. Mr. Manly, upon being appointed to Mr. Walsh's office, named Mr. Black as his alternate.

Mr. Walsh, while retaining his citizenship at Kansas City, Mo., will practice law in New York.

* * *

Mr. Manly has devoted his time to national, industrial and economic problems since 1908. A graduate of Washington and Lee University, he was later a fellow at the University of Chicago, becoming a special agent for the Bureau of Labor Statistics (Department of Labor) in 1908. During his tenure of this office, from 1908 to 1913, he directed an investigation and wrote the four-volume report entitled "The Iron and Steel Industry," which was the first complete survey of an American industry. After the report was completed Congress appropriated $50,000 for its publication.

Mr. Manly, in 1913, was in charge of an investigation for the bureau of anthracite coal prices, which stated that the coal operators had increased prices for the year 1912 $13,000,000 above the wage increases awarded to the miners that year. Mr. Manly was economic adviser to the arbitration board that fixed wages in the cloak and suit industry in New York in 1913. He was director of research and investigation for the United States Industrial Relations Commission, and in 1915 wrote what is known as the "Manly report" on the work of the commission, 250,000 copies of which were published.

Following is the letter from the President to Mr. Walsh:

The White House,
Washington, November 27, 1918.

My Dear Mr. Walsh:

It is with real regret that, after carefully considering your letter of November 19th, tendering your resignation as joint chairman of the National War Labor Board, I am compelled, in justice to the cogent and almost imperative professional reasons you give for this step, to consent to your retirement at this time from the high position whose duties you have administered with such judgment, tact and robust integrity. For the services you have thus rendered, I thank you not only on my part but on behalf of the country.

Your personal expressions of goodwill towards me are reciprocated in the fullest measure, and I think I need not assure you, my dear Mr. Walsh, that you will carry with you into private life and into the practice of your profession my best wishes for the success you deserve for the high character you have always consistently maintained.

Cordially and sincerely yours,
(Signed) Woodrow Wilson.

Hon. Frank P. Walsh, Joint Chairman, National War Labor Board, Washington, D. C.

* * *

Following is the letter from the Secretary of Labor to Mr. Walsh:

The Secretary of Labor,
Washington, November 27, 1918.

My Dear Mr. Walsh:

It is with the sense of great personal loss, not only to myself, but to the department, that I have transmitted to the President of the United States your letter of November 19th, tendering your resignation as joint chairman of the National War Labor Board. I have the honor to enclose to you herewith the President's answer to your letter, and to designate the close of business on December 3, 1918, as the date upon which the resignation shall take effect.

Knowing the sacrifices you have made to accept the important responsibilities which the Department of Labor requested you to assume, I recognize the fact that the Government has been fortunate in having your services so long, no matter how grateful I may be that your personal and professional necessities now require that attention which up to the moment you have so unselfishly given to the benefit of the country in the crisis of the war. The services you have rendered have been of incalculable value not only in themselves but in the high standards they have set in the conscientious discharge of vast and delicate responsibilities.

While expressing to you the official thanks of the department, I avail myself of this occasion to assure you that you take with you my personal best wishes for your happiness and good fortune both now and through all your future years.

Cordially and faithfully yours,
(Signed) W. B. Wilson,
Secretary of Labor.

The Hon. Frank P. Walsh, Joint Chairman, National War Labor Board, Washington, D. C.

WHEN THE GERMANS LEFT.

With all their looting and their pillaging, the Germans have had to leave a wealth of steel in their retreat from France. This steel is buried in the grain fields and the woodlands over which the warring nations have been fighting. It is the steel from countless shells, and its value is high in the millions of marks. Some day it will be salvaged by the people of France, though serving as meager compensation to those whose fields have been damaged. These artificial mines will no doubt be worked for years, and the wasted German steel turned into the tools of peaceful French farmers.

"What a narrow street that is!" said the visitor being shown about the suburban town by a citizen. "Yes; it's narrow," replied the citizen. "And in wretched condition. See the holes in the pavement?" "Yes; it looks bad." "And dirty everywhere. What is the name of that street?" "That's Grand street."

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

President in Doubt on Future R. R. Plan.

In announcing his proposed visit to Europe at a joint meeting of the Senate and House, President Wilson, discussing the question of what to do with railroads now under Government control, said:

"I have no confident judgment of my own," and "I frankly turn to you for counsel upon it."

The President expressed a hope "for the formal conclusion of the war by treaty by the time spring has come." As the law permits Government railroad control for 21 months after the peace proclamation is issued, this would mean that the Government must release the roads not later than the early months of 1921.

At the present time, the President stated, the railroad administration has plans for the full equipment of the railroads. Under the law these plans must be indorsed by the board of directors of the various properties. Some of the boards have given their consent and others have not. With the war over, the situation has become complicated and the President gives notice—in diplomatic terms—that if there is no agitation by the public for continued Government control or for Government ownership or regulation, which will result in possible congressional action, that he will return the roads to their owners, even before the time designated by law.

The President said:

"The only thing that is perfectly clear to me is that it is not fair either to the public or to the owners of the railroads to leave the question unanswered, and that it will presently become my duty to relinquish control of the roads, even before the expiration of the statutory period, unless there should appear some clear prospect in the meantime of a legislative solution. Their release would at least produce one element of a solution, namely, certainty and a quick stimulation of private initiative."

While the President did not express an opinion on future railroad policies, he did insist that the "old conditions unmodified" under which railroads were operated have lost their usefulness.

Oppose Wage Reductions.

In defeating autocracy, labor will not accept wage reductions as its reward, declared Frank J. Hayes, president of the United Mine Workers, in discussing the suggestion that wages must be cut.

"Wages have gone up during the war," he said, "but they have not advanced proportionately to the increased cost of living. All authorities agree that there is no likelihood of prices declining for at least a year. But despite this prophecy, councils of employers are now devising programs to batter down wages. It is this scheming that organized labor must combat. We cannot parley, linger, wait. Our forces must be up and doing, not only to thwart attempted reduction but to win additional gains to meet living costs which present-day wages are so inadequate to cope with.

"We have talked billions during the war, and as a result commercial leaders who used to think in millions are now planning billion-dollar enterprises. Corners for domestic trade, corners for foreign trade, are the dreams of leaders of proposed gigantic combines to realize their ambitions. And, of course, these leaders point with assurance to their ability to decrease wages to price their production beyond competition.

"Labor must accept no reductions. Having patriotically mined the coal, manufactured the munitions, built the ships and offered their sons, that made possible the defeat of autocracy, labor will not accept as its reward a reduction in wages."

When War Laws Will Expire.

Legislation passed to perfect this country's war machine will expire on the following dates:

Control of railroads—Twenty-one months after the war (proclamation of peace).

Control of telegraph and telephone lines—During the war.

Food and fuel control—End of the war.

Espionage act—End of the war.

Housing construction—End of the war, except for shipbuilders.

Labor employment—During the emergency.

Reorganization of Government bureaus under the Overman law—Six months after the war.

Government operation of ships—Five years after the war.

Aircraft Board—Six months after the war.

War Trade Board and export control—End of the war.

War Finance Corporation—Six months after the war, with further time for liquidating.

Capital Issues Committee—Six months after the war.

Alien property custodian—End of the war, with extension of time for certain duties.

Agricultural stimulation—End of present emergency.

Timber Workers Warned.

Secretary-Treasurer Norland of the International Union of Timber Workers warns these workers that an attempt will be made to establish long hours and low wages in the Northwest as soon as Government restrictions are removed.

To justify this belief the trade unionist points to the attitude of employers during the past year when the Government needed a maximum production of timber.

"They have actually ignored," says Norland, "the Government's interest and welfare during the critical war period and did so to such an extent that the Government has been forced to compel a majority of them to a reasonable position.

"So we cannot expect a people who are so autocratic and selfish, who would actually sacrifice our very Government to promote their own selfish interests, to do other than force their employers down to the lowest standard. So I warn our members of the Northwest to do all they can towards strengthening their organization;

World's Workers

A few weeks ago King George amply demonstrated that kings could earn their livings if they cared to do so, says the Maoriland, N. Z., Worker. When passing through the Army Clothing Factory, His Majesty was invited to try his hand at cutting out some flannel shirts. He accepted the invitation, got hold of the electric cutter just like an ordinary mortal, and in a few seconds, lo and behold! a pile of flannel fifty thicknesses deep, cut out true to pattern. The fact that the machine could not possibly go wrong or the flannel be cut out any other way than true to pattern does not detract from the kingly triumph one iota. Alone he did it. History can henceforth record that a king has done a useful act. Incidentally, also, King George solved a problem which must have worried some of the odd dozen or so ex-monarchs in Europe—that of how to earn an honest crust. The question of what to do with unemployed royalty need cause no anxiety now, not so long as there are shirts to be made.

A manifesto issued by the British National Alliance of Employers and Employed calls upon the Government to summon "a thoroughly representative round-table conference" to consider the labor situation and frame a national policy for the prevention of strikes. "It is difficult," the manifesto declares, "to discover that Governmental departments are paying sufficient regard to the experience of the past four years. It is still more difficult to discover that the Government has any co-ordinated industrial policy capable of meeting events as they occur now." What is needed is a policy "not of drift but of prevention; one that shall be capable of direct and effective application before strikes occur, that will meet after-war conditions as well as present needs, and that shall either convert or destroy all the disruptive groups in the country." One of the signers of the manifesto is J. Havelock Wilson, head of the National Sailors and Firemen's Union of Great Britain and Ireland.

The example of the London women workers, says an Australian exchange, seems to have fired the imagination and souls of the London policemen, and 12,000 of them struck work for better pay—and won. People read the cables and rubbed their eyes. Could it possibly be true? Policemen on strike—in the very heart of the empire, too! Impossible. But it was true. And they behaved very much like the commonest sort of striker. They even had a procession. Five hundred of them hit the copper trail for Scotland Yard, headed by a piper. They resented; just like miners or watersiders, the fact that some policemen had remained on duty, and shouted all sorts of rude remarks: "Blacklegs!" "Dirty dogs!" and, most significant of all, "Are we afraid of the army?" The London policemen have evidently got a glimmering of their position in society as a repressive force. They also know what purposes military can be used for. It is to be hoped their knowledge will be retained for use in the future. Even policemen are not impervious to reason and logic and the reasonable and logical solution of the situation of the wage workers is trades unionism and ever more trades unionism, evolving into industrial and class unionism.

INFORMATION WANTED.

Thomas F. Noone, a native of Ireland, born 1887, last heard of in New York, Feb. 15, 1918, is inquired for by his sister, Mrs. Thomas J. Condry, 9 Rosseter St., Great Barrington, Mass. 10-16-18

Members of the crew of the SS. "Kellogg" who were on board when she picked up the SS. "Catania" can obtain money due them for salvage services by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Anyone knowing the whereabouts of Jan Zwart, will please communicate with Consul General of the Netherlands, Mills Bldg., Montgomery and Bush streets. 10-23-18

Pacific Coast Marine.

The Pacific Coast Steamship Company has assigned the Spokane on the run between San Pedro and San Francisco, touching at Santa Barbara.

The license of C. A. Christiansen, second mate of the steamer "Blackford," which together with those of the other officers of the vessel was suspended for three months for neglect of duty when the "Blackford" foundered in a hurricane 125 miles south of Cape St. Lucas, September 17, has been restored by Supervising Inspector John K. Bulger.

The sale of the five-masted schooner "John W. Wells," outbound to Australia, by her former owners, the Charles R. McCormick Steamship Company, to the Gulf Mail & Steamship Company, on December 2, for $450,000, has been confirmed by Charles R. McCormick. The vessel will be turned over to her new owners when she arrives in Melbourne. It is said that the installation of two 500 horsepower engines in the vessel is contemplated by the new owners.

Judge Bean of the Federal court at Portland has handed down a decision ordering that $2400 be paid as salvage compensation to the steamer "Daisy Freeman," its master and its crew. The order states that two-thirds of the amount be paid to the vessel and one-third to the master and the crew. The decree was handed down as the result of a suit filed following the towing of the gasoline schooner "Anvil," which was partially wrecked during a storm off the Oregon coast last winter; to Astoria by the "Daisy Freeman."

Resumption of the Harrison Direct Line service between the United Kingdom and ports of the Pacific was announced by Balfour, Guthrie & Co., agents for the line at San Francisco. The first steamship is scheduled to sail from Glasgow January 25. This will be the "Professor," well known at this port before August, 1914. It is not known how many of the vessels will be installed in the service, but the agents expect that a full service will be initiated before another year. Calls will be made at San Francisco and at Puget Sound ports.

All tenders for the purchase of the $1,990,000 bond issue for the construction of the new Smith Cove terminal by the Port of Seattle were rejected at a special meeting of the commission on December 12 and new tenders asked for to be received on or before February 10, 1919. At the special meeting Major J. F. Douglas, United States Army, appeared before the commission with a tender for the lease by the Quartermaster's Department of the Bell-street terminal. Major Douglas will inspect the terminal and the negotiations, if satisfactory, will be concluded at an early date.

The San Francisco Bridge Company's dredge "Oakland," which has been operating in San Diego harbor on Government work for nearly a year, is expected to complete the reclamation project within the next sixty days. The "Oakland" is engaged in reclaiming 732 acres of lowlands, whereon the Navy Department plans the construction of a $4,000,000 marine brigade post, at a flat contract price of 13 cents per cubic yard. More than 1,000,000 cubic yards of material has been excavated. A new 700 horsepower engine recently was installed in the "Oakland," giving the dredge a capacity of approximately 220,000 cubic yards a month.

John Woodruff, captain, and David Colvin, Victor Anderson and Ed Prince, crew of the gasoline schooner "Della," escaped to shore when their craft foundered in the vicinity of Port Orchard, Ore., on December 9, and later was totally wrecked on the beach, near there. Word came that the "Della" struck a rock while trying to weather out a big storm in the Cape Blanco district. The "Della" left Coos Bay on December 7 with a general merchandise cargo for her owners, the People's Company of Gold Beach. Stormy weather held up her progress, and the "Della" was able to make less than 50 miles in two days.

Wreckers at Tacoma are knocking down the remains of the old stern-wheel steamer "Greyhound," one of the best known of the old-time boats plying on Puget Sound. The hull has been purchased by Olaf Mahle, who will use it as a barge. The "Greyhound" was built by Captain Claud Troup at Portland, Ore., in 1890, and brought around to the Sound to take the kinks out of some of the fast boats of those days. The "Greyhound" was 139.8 feet long by 18.5 feet beam, and having plenty of power was able to travel with the best of them. For a number of years she ran between Seattle and Everett, but of late has been running between Tacoma and Olympia as a freight boat.

Rapid progress is being made on the construction of two 7500-ton concrete tankers at the plant of the Pacific Marine & Construction Company in San Diego. The midship and stern sections of the first tanker have been assembled on the ways and a large quantity of steel for the hull put in place. Concrete will be poured within the next few days. The molds and templates for the second tanker are being assembled on No. 2 ways. Steel will be laid on this craft within a week. It is expected the first tanker will be launched January 15 and the second about March 1. Eight tankers of the type now under construction are to be built for the United States Shipping Board. Each will be 425 feet long, have a carrying capacity of 50,000 barrels of oil, and a speed of twelve knots an hour. The tankers will cost $900,000 each and will be the largest concrete craft of their type in the world.

The Commercial Pacific Cable Company, allied with the Commercial Cable Company, has asked for an injunction in the Federal court restraining Postmaster-General Burleson from further control of its 10,000 miles of cable between San Francisco and China, Japan and the Philippine Islands. Violation of international law by Burleson is charged in the complaint, which asserts that the United States had not obtained consent to the seizure from the nations upon whose territory the cables land. It is further alleged that such consent would be unconstitutional without a formal treaty approved by the Senate. This contention is upheld, the company declares, by information from its London office that a department of the British Government has instructed the Commercial Cable Company's representatives there to make no changes at the direction of the American Postmaster-General without first submitting them to that department for approval.

Pacific Coast shipping men seem to think that comparatively few contracts will be let to the shipbuilding plants for new vessels by Americans as a result of the order of the Shipping Board which permits the builders to bid for private work. One of the prominent ship operators said the feeling prevails that nothing will be done in new construction until action is taken by the Government to dispose of its ships. Some believe that the entire fleet will be chartered at a rate that will permit operation at a profit, and others are certain that the Government will mark off a considerable portion of the initial cost and sell at the discounted figure. The shippers all agree that it will be a fallacy to order new ships at the present high price, which will have to compete with other vessels that will be secured for considerably less or against ships chartered from the Government at a rate based upon conservative values. It is not anticipated, however, that many of the wooden ships will pass from the possession of the Government at the rate of $700,000 each. The ship operators say that one is liable to secure one of the lame ducks, and this may soon develop into a "dead duck," for until a wooden ship of a green vintage is thoroughly tried out, there is no assurance that it may not become unseaworthy at any time.

The United States Government has filed suit for $250,000 in the United States District Court at San Francisco against the Northern and Southern Steamship Company, owner of the steamship "Sacramento." The complaint says the American registry for the vessel was fraudulently secured. On account of false statements as to ownership, the Government asks for the sum sued for, said to be the value of the steamship when in San Francisco in October, 1914. The officers of the Northern and Southern Steamship Company and other shipping men involved in the transfer of the vessel from the Hamburg-American line to the Northern and Southern Steamship Company in August, 1914, are awaiting trial on the charge of a violation of the neutrality laws in shipping supplies to German warships. The supplies on the "Sacramento" were turned over to the German cruiser "Leipsic" and other war craft. The "Sacramento" was formerly the German steamship "Alexandria." Special War Attorney John W. Preston and United States Attorney Annette A. Adams say in the libel that Philip R. Thayer, president of the Northern and Southern Steamship Company, made "false and untrue" allegations in his affidavit in swearing that the sale of the "Sacramento" was bona fide, was to be permanent, and without any agreement to return to the Hamburg-American people after one voyage. The Government says the vessel was not sold as no title was conveyed and was to be returned to the Germans.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.
Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, DECEMBER 18, 1918.

THE SHIPPING BOARD'S REPORT.

The second annual report of the United States Shipping Board, just made public, is a bulky and comprehensive document, but the all important question of what shall become of our permanent merchant marine policy is left for "future determination." The promise is made that at some future date suggestions will be made regarding both development and operation, but for the present, nothing definite is offered.

The report reviews all the activities of the Board, especially in connection with the development of port and harbor facilities, training deck and engineer officers and crews for the merchant marine, establishment and developing shipyards and training workmen for them, and establishing housing facilities for shipyard workers.

Detailed information is furnished upon the great fleet now operated by the Government. It shows how enemy tonnage was secured, not only by taking over vessels interned in United States harbors, but by purchasing and chartering from other nations which likewise had seized German and Austrian ships. Cuba, China, Siam, Brazil, Uruguay and Peru all aided the United States and the allies in this regard. The cost of repairing the German and Austrian vessels amounted to approximately $11,194,862.70.

The Emergency Fleet Corporation of the board owned on November 21, according to the report, a total of 455 new ships of 2,648,892 deadweight tons, fifty-nine former German vessels of 343,206 deadweight tons, six former Austrian vessels aggregating 35,262 deadweight tons and thirty six other ships of 137,248 tons.

Of the eighty one Dutch vessels taken over under Presidential proclamation, fifty-two of 236,340 deadweight tons were managed by the Shipping Board and the others by the Navy. There were 328 foreign ships of 1,366,361 deadweight tons under charter to the Board on this date and 450 American ships of 2,910,766 deadweight tons under requisition, making a total fleet of 1386 vessels aggregating 7,498,075 deadweight tons owned, managed or chartered by the Shipping Board.

This is truly a tremendous volume of tonnage under single control. But what shall become of it when peace has been formally declared and when the peaceful, though not less strenuous, battles for world control of commerce and shipping will be resumed?

Captain Dollar and the reactionary element in shipping circles, for which he appears to be the self-appointed spokesman, want to man our offshore shipping with coolies, or as an alternative to have the American Government pay the difference between Japanese and American sea wages.

A correspondent in the New York World points out that such a proposal means that the American people should bear the burden of the Japanese Government's industrial injustice. In line with the JOURNAL'S recent comment on international agreements relating to minimum guarantees, the World's correspondent says:

> If the Freedom of the Seas and the League of Nations are to be more than dreams of academic idealism they must be applied to just such cases (i. e., industrial injustice in Japan). If Japan or any other nation wishes to join the League of Nations and to enjoy the freedom of the seas she and they must meet certain minimum standards of industrial justice. Otherwise her ships should not be allowed to pass Suez, Panama, Gibralter, or to enter any port of those members of the League who agree to such minimum standards. The League of Nations must fundamentally exist to drive from its ports all ships, products and exports of underpaid labor, or low living standards, of industrial injustice. To ask Americans to bear the results of Japan's low standards of life is criminal. It piles one injustice on top of another. While it would be farsighted national policy for the government to pay a liberal monthly allowance to active American navymen enrolled in the merchant marine service in order to maintain a large and efficient navy personnel we have no right to burden America with the results of Japanese unfairness. I do not agree with Captain Dollar that we cannot compel Japan to play fair.

This is strong, but clear and emphatic language. It touches the very center of the problem that the Shipping Board has left for "future determination."

THE U. S. JUNKERS.

Prussia has her junkers but from all accounts they are having a rather difficult time of late. The very men who only a few months ago refused to yield to the universal demand for manhood suffrage in the internal affairs of Prussia have now taken to the tall timbers in fear of their lives.

It is different with junkerism in the United States.

Wm. Z. Foster, in charge of the American Federation of Labor campaign for organizing the iron and steel workers has supplied the JOURNAL with a bill of grievances well calculated to make any American gasp.

For instance, we learn that in the various towns along the Monongahela River, the heart of America's steel industry, there prevails not a whit more freedom of assembly than existed in Prussia before the revolution. Despite its indispensable services to the Government in the great war, the American Federation of Labor is treated as an outlaw organization in this Prussianized district. It is boldly denied the right to hold public meetings.

To suppress the right of assembly, the steel interests seem to have a bag of tricks, to be employed as occasion demands. In Braddock and Homestead, where halls for mass meetings had been secured and paid for, the local city officials terrorized the owners of the halls into calling off the meetings and refunding the rent money. In Rankin, where the hall proprietor had more courage than usual and refused to submit to such outrageous dictation, the local board of health was made to take him quickly in hand and close his place.

But, flagrant as were these crimes against the right of assemblage, it rested with McKeesport to produce another still worse. In Braddock, Homestead and Rankin the steel interests used at least some pretense to camouflage their real intentions. But, in McKeesport, they came straight out into broad daylight and positively forbade the American Federation of Labor to hold meetings in that city. To quote Mr. Foster:

> In McKeesport, the un-American and unconstitutional regulation prevails that the sanction of the mayor must be had before public meetings can be held. It is impossible to hire a hall until this regulation is complied with. A. F. of L. organizers, therefore, proceeded to Mayor Lysle to secure the necessary permit for their meetings. They were refused point blank and told that the A. F. of L. is a bunch of I. W. W., anarchists, bolsheviki and agitators and would not be allowed to hold any meetings in that city.
>
> The matter was then taken up before the McKeesport Labor Council, whose president, Geo. Howe, is also a member of the City Council. It was decided to attempt to have the City Council override the action of the mayor. Brother Howe and several representatives of the National committee fully explained the purposes of the A. F. of L., the loyal services rendered by it to the Government in the great war crisis and the danger of suppressing free speech. But their arguments fell on deaf ears. The steel interests own the mayor and the City Council of McKeesport and these went through with the program outlined by their masters. A motion by Brother Howe to have the City Council request the mayor to grant the permit did not even receive a second, so completely do the steel interests dominate the local government in McKeesport.

Mr. Foster wants to know if organized labor is going to stand for such outrageous treatment. "If it does," he says, "it will surely deserve all the hardships that will be visited upon it by the tyrannical owners of the steel industry."

All of which forcibly reminds us that while the war for world democracy has been won we must continue to give battle to our own junkers. We must, in some parts of America, at least, go right on struggling and fighting for the mere "right" to organize. For—only when that right is freely conceded and, what is more important, firmly established and in actual practice—can there be any semblance of democracy in industry. And that is exactly what the iron and steel barons of Pennsylvania seek to prevent. The beautiful platitudes upon this subject which have recently emanated from John D. Rockefeller, Jr., Chas. M. Schwab and other captains of industry do not alter this situation in the least. A paper concession of "the right to organize" does not grant anything. What the workers insist upon is the actual and practical application of that right without hindrance or restraint.

The idea that all economic questions may be solved by the ballot, "which registers the freeman's will as lightning does the will of God," is one of the most remarkable crochets of the times. We can not imagine such a state of beatitude, and we would not hope for it if we could. There is this difference between the will of the freeman and the will of God: there is but one God, while there are many freemen, each with a will of his own and a strong disposition to do more than merely register it.

Freedom is our heritage and we are resolved to maintain and extend it no matter what the sacrifice.

WHAT'S WRONG IN SAN FRANCISCO?

Contrary to general expectation the Workmen's Compensation Amendment to the Constitution of California was adopted by only a small margin. It was defeated in most of the rural districts but the "No" vote was offset by the majorities which were piled up in all the industrial centers, except San Francisco.

San Francisco, the alleged "union-ridden" city, returned a majority against an amendment especially designed to give constitutional sanction to existing laws dealing with workmen's compensation, insurance and safety. Surely, this indicates that there is something wrong, somewhere in San Francisco.

One can understand and explain the defeat of the Health Insurance Amendment despite its endorsement by the Labor Council and the Building Trades Council. This measure was bitterly and viciously fought by the Insurance Federation, a new alliance of commercial insurance "interests" which furnished seemingly unlimited campaign funds and masqueraded under numerous camouflaged alibis. Besides, this was the first State-wide vote upon Health Insurance, a proposal widely but falsely advertised as "German-made."

But all was different with the Workmen's Compensation Amendment. This particular protection for workers has been firmly established almost everywhere in America and throughout the civilized world. Its merit has been universally conceded. Yet the returns show that thousands of the organized workers in San Francisco voted against constitutional sanction for existing laws upon that subject.

What was wrong? Was it the "flu"? Was it the lack of the right kind of publicity and a resulting downright ignorance upon the subject, or did it go down because the Chamber of Commerce and its organs of publicity opposed practically every measure on the ballot which had been endorsed by the organized workers? Will our San Francisco labor contemporaries please explain?

MOVING THE GOLDEN GATE.

During the past week the following order was received at the office of the Sailors' Union of the Pacific in San Francisco:

Send seven sailors at once to move the Golden Gate from San Francisco to Vallejo.

To the average uninformed land lubber the execution of such an herculean task as the moving of world-famed Golden Gate will doubtless present a chain of insurmountable difficulties. Not so with the men of the sea.

Without hesitation on the part of the official on duty in the Sailors' Union office the order was promptly and expeditiously executed. Seven sailors, good and true, tackled the job and performed the task assigned to them, without a hitch. The "Golden Gate" in this instance being a ship owned by the Rolph Navigation & Coal Company.

It is paradoxical but true that were it not for the establishment of the minimum wage all wages would not be down to the lowest possible point.

If we are to believe that one's ideals are the reflex of early training, it is to be hoped that those of the factory child will never be realized.

THE FREEDOM OF THE SEAS.

The Need for a New International Agreement Upon the Power of a State on Adjacent Waters and on the High Seas.

In its widest scope the problem of "the freedom of the seas" includes the questions of national territorial jurisdiction over the sea or its arms, belligerent rights at sea, and piracy and the slave trade or their suppression. Reputable authorities may be found who regard this or that phase of the problem as the particular question of the feredom of the seas, but it seems wiser, in discussing the question, to keep the whole field in view.

To free the seas in the days of Minos of Crete, or of Pompey, or of Commodore Preble meant to rid the seas of pirates who, tongue in cheek perhaps, insisted on a freedom of the seas of their own anarchic sort. A free sea in the first half of the nineteenth century seemed to mean liberty for American slave-traders to carry on their commerce without interference from England or any other Power. These, however, are eddies in the historical current of the discussion and may be left at one side. The main questions now remaining are two, and both of them are vital. For centuries, from about 1200 to 1650, the greatest menace to the freedom of the seas, was the attempt on the part of Venice, of Portugal, and of Britain to include parts of the seas in their imperial domains. Just at present there is a tendency to refer solely to the matter of belligerent Powers at sea, and to say that the seas are free in time of peace or that there is no longer a problem of the freedom of the seas except in time of war; but the war will not last forever, and the question of territorial dominion over the seas, although a part of the law of peace as much as of the law of war, is in the foreground of discussion to-day. The Dardanelles and the Straits of Gibraltar have not been entirely absent from the declarations of war aims and peace terms.

July, 1914, saw the law of territorial waters in a fairly certain and settled condition as international law goes. Over a cerain portion of the open waters adjoining their coast, over enclosed or semi-enclosed gulfs or bays of certain size or proportions, over certain portions of the straits, canals and rivers partly or wholly included in their territories, riparian states enjoyed a more or less well-defined and well-recognized authority in respect of the ships and nationals of other States entering those areas. That power fell short of complete sovereignty, but it extended to the enforcement of measures for the safety of shipping, the regulation of fisheries, and the protection of the health and safety of the inhabitants of the shore and of the national security. On certain grounds the riparian State could exclude the nationals of other States; the neutral State might, for example, prohibit belligerent navigation of its territorial waters in order to protect its neutrality. The most important limitation upon this power of the State was the so-called right of innocent navigation through the waters over which such power was exercised, possessed by non-riparian States in time of peace and, subject to further limitations, in time of war. For the precise and manifold details of the nature and extent of the power of the State over such waters as were "territorial," and of the limitations of that power, reference must be had to the standard authorities on maritime international law.

Beyond the question of the extent of the power exercised over territorial waters lies the more elementary question of the extent of such waters themselves. Territorial waters may be defined from the land outward. Petty or inland canals and so-called non-navigable rivers do not enter the discussion at all, for the reason that they are completely under the sovereignty of the State. Navigable rivers, ship canals, and interoceanic canals lying entirely within one State are territorial waters of that State. Navigable rivers which touch two or more States are subject to a joint or concurrent territorial jurisdiction whose complex nature is often defined by international convention. Straits, gulfs and coastal waters are within the jurisdiction of the riparian State to a width of at least three miles. Straits less than six miles in width, with different States occupying the opposite shores, are under a control divided by the middle of the stream; if bounded by one State alone, such straits are subject to the power of that State. The inclusion or exclusion of gulfs or bays which in their entirety are within the jurisdiction of the riparian State depends upon the width of their entrances, and the depth inland of the gulf or bay in question in proportion to the width of its mouth. The bases in principle for such inclusion are the need for security on the part of the State within whose coast the bay is found, and the ability of that State to control the waters of the bay by coast artillery. For the varying national claims to wider coastal waters, straits and gulfs, corresponding to variations in real or fancied danger to the coasts of one State or another and to the progress in the art of ballistics made in different States, reference must again be made to the texts and manuals of the law.

(Continued on Page 10.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Dec. 16, 1918.
Regular weekly meeting came to order at 7 p. m., E. A. Erickson presiding. Secretary reported shipping medium.

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., Dec. 16, 1918.
No meeting. Shipping slow; men scarce.

J. ETCHELLS, Agent.

Room 11, de Cosmos Block, 1424 Government St.

Vancouver, B. C., Dec. 16, 1918.
Shipping poor.

W. G. MILLARD, Agent pro tem.

58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, Dec. 16, 1918.
No meeting. Shipping and prospects fair.

H. L. PETTERSON, Agent.

2016 North 30th St. Tel. Main 808.

Seattle Agency, Dec. 16, 1918.
Shipping medium.

P. B. GILL, Agent.

84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, Dec. 16, 1918.
Shipping fair; few members around.

ED. ROSENBERG, Agent.

P. O. Box 280. Tel. Main 557.

Portland Agency, Dec. 16, 1918.
Shipping medium; prospects fair.

JACK ROSEN, Agent.

88½ Third Street. Tel. Main 6013.

San Pedro Agency, Dec. 16, 1918.
Shipping good; members scarce.

HARRY OHLSON, Agent.

128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, Dec. 9, 1918.
Shipping good; prospects fair.

JACK EDWARDSON, Agent pro tem.

DIED.

Anders O. Hemnes, No. 2819, a native of Norway, age 33. Died at Seattle, Wash., Nov. 28, 1918.

It is gratifying to reflect that much of the so-called dissension in the ranks of organized labor is but the inevitable accompaniment and evidence of the vital force within the movement. The dead alone present a perfectly peaceful exterior.

The man who talks about the "sacrifices" he has made for the labor movement usually spends most of his energies in the effort to "get back his own"—and as much more as possible.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Events are moving swiftly toward a nation-wide epidemic of big strikes—possibly worse.

The National War Labor Board is faced with the fact that it cannot enforce its awards, because the Government is no longer placing war contracts with the employers. Big employers are dismissing men wholesale. Men who have been active in organizing the workers in the war industries find themselves the first to be let out. Seven hundred cases now before the War Labor Board for settlement may never come to settlement, because the Board will be dissolved if the employers in a series of typical cases defy the Government to dictate their industrial conditions.

Bethlehem Steel will probably be the pivotal case, and Charles M. Schwab will determine—Possibly within the next few days—whether the award made by the Board shall be treated as a serious obligation upon the company or as another "scrap of paper." If the award is torn up by Schwab, as now seems likely to happen, then industrial war is on everywhere.

There are 30,000 men at the Bethlehem Steel plants. For months the work of unionizing them has been steadily going forward, but it is still far from completed. Shop committees, provided in the award made by the Board, have been organized. The men have got a taste of industrial freedom; how far they will defend this freedom will be demonstrated if and when Schwab announces the return of industrial autocracy. Thousands of them have already been discharged, including a large percentage of the union men. The discharged men are in an angry mood.

Unless the American labor movement takes quick and effective action the situation is going to be complicated by the discharge of millions of men from the army. The California State Federation of Labor, in the report of its Reconstruction Committee, has called for the representation of these discharged soldiers in all labor councils throughout the country. What may result from the failure of central labor bodies to see that the union men among these soldiers shall proceed to organize them, locally and nationally, for the handling of the problem of work for soldiers, may be guessed from the remarks made at a reconstruction conference in New York City to-day by Nathan A. Smyth, assistant director-general of the United States Employment Service.

"The Employment Service," he said, "has been called to stand with others at the Chateau Thierry of the defense of this country against the incurrence of Bolshevism. To succeed, it needs help. In no spirit of pessimism, but with abounding confidence in the ability of this country to meet any dangers for which it is prepared, we should face present facts, reckon with threatened evils, and take steps to meet them."

What are these dangers, this peril of Bolshevism, for which we must be prepared, if we are to remain safe?

Smyth explains that we are flooding the country with jobless men. There is no good reason for a period of great unemployment, if those who have the power to control demobilization of the army, and those who have power to give employment in the manufacturing industries, will keep their heads. But the manufacturers are waiting for possible better conditions—lower interest rates on borrowed capital, and lower wages—before launching new industrial schemes. And the War Department has not waited until jobs should be found for the men in the camps in this country before turning them loose. More than 1,200,000 of these soldiers are to be sent home from the camps as rapidly as their officers can prepare the papers. Behind them the million already ordered home from France are being hurried across the ocean for distribution to the camps where they will be held for a short while.

"The soldiers are being mustered out on a few days' notice," Smyth declared, "with no advance of pay; given in money the cost of transportation to their homes, free to buy tickets wherever they please.

"Already they are turning up in the cities, improvident, 'broke,' away from home, without work, applicants for civilian relief. Many of them don't yet want work. Many others are unwilling to take the 'day labor' jobs which alone them can find. There is every prospect that unless remedial measures are promptly taken the sight of stranded, workless, moneyless soldiers will be common throughout the land."

The Employment Service is undertaking a big campaign to find jobs for the returned war workers and the returned soldiers. But it is not demanding any particular standard of wages or conditions with these jobs. That is up to the men themselves, now that the war is over. Also, it is up to every worker who wants to maintain or improve the wage level and the industrial conditions, such as they are to-day, in his own community and his own industry. The answer is organization of the returning men for co-operation with organized labor in defense of the industrial standards set by the National War Labor Board.

It is true, Smyth says, that the Army has agreed to regulate the speed of its demobilization "so far as possible" by the condition of unemployment reported from each section of the country, but even so, the Employment Service and the various other agencies that co-operate with it are not able to create jobs for the men.

"The great danger in the next four months," he said to-day, is that there won't be enough jobs to go around; that unemployment will come with attendant misery and social unrest at a time when anarchistic tendencies are contagious."

Mr. Smyth, who has had no experience with the organized labor movement, seems to be worried rather because hungry men may be disorderly, than because men may be hungry. His appeal is to those who would suffer from disorder, not to those who would suffer from hunger. That is why he speaks of standing on the defensive against Bolshevism and anarchistic tendencies.

Every spokesman of organized labor who has discussed this demobilization problem has served notice that American labor is not in a begging mood; there must be no reduction of wages, no Prussian raids upon the right of the great mass of Americans to security and self-respect in the conditions of their employment. If that proposition is to be challenged by the employers in the United States, organized labor will move to its defense—be the challenger the Bethlehem Steel Corporation or all the industrial corporations combined. It is very unfortunate that labor has not drawn up, officially and nationally, a program for reconstruction in the industrial world. As matters stand, the program of "Labor's Fourteen Points," endorsed first by the Chicago Federation of Labor and now by the Illinois State Federation of Labor as the program of the Independent Labor Party, must serve for a guide to what labor demands in this crisis.

As the United States Employment Service points out, there is no good reason for employers to believe that they will get cheaper labor by waiting until spring. Instead of that, the coming of peace has determined hundreds of thousands of our foreign-born to go back to Europe to help rebuild and reorganize their native countries, and to take a part in the public affairs of the republics that are arising there. Immigration to the United States is at a low ebb, and will not return to its pre-war level within the next ten years, if at all. Great numbers of men who formerly worked in town have made up their minds, while in the army, to go to farming in order to maintain the benefit they have gained from an open-air life. Once the readjustment is made, there will be no oversupply of men looking for jobs.

But in the next four months there is danger. That danger will be met only when the returning soldiers and war workers are formed into a national organization, with local banches and city central bodies, in close alliance with the organized labor movement, and standing for a big constructive program like "Labor's Fourteen Points."

Labor Congressmen have been humiliated, during the past two or three years, at the lack of earnest support given their legislative demands by the labor movement itself. Anti-labor members of Congress have sneered at the idea that organized labor ever stood by its own program and its own conditions on election day. The time has come when labor and the soldiers and war workers may get together, in the face of threatened unemployment and industrial Prussianism, to make Congress listen and persuade Congress to act.

Possibly the first steps toward such a nation-wide alliance may be taken in Chicago, at the time of the national labor conference to consider the Mooney strike. Frank P. Walsh is touring the country to organize the Mooney defense campaign. By the time he goes to the Chicago conference the attitude of the organized employers toward awards of the War Labor Board and toward keeping up the level of wages will have been made clear. If a drive against labor's new standards is indicated, then Walsh and the labor delegates who meet him in Chicago may be expected to plan a working-class defense in addition to the Mooney defense.

All the efforts of certain anti-labor interests in New York City to line up the soldiers and sailors against the organized labor forces failed, as soon as the real purpose of the anti-red-flag agitation was discovered. The soldiers are overwhelmingly pro-labor. They know they must

work for a living. They want good wages. They know they are going to get high wages through organization. All they lack now is the leadership of trade unionists among them, to make their organization for industrial democracy a fact.

Meantime, watch Bethlehem.

* * *

The Senate has voted down the McKellar bill, providing old age pensions for Government employes in the civil service, half the cost to be borne by the Government and half by the beneficiaries. It adopted the Pomerene amendment, requiring that the employes pay all the costs after the first few years. British old age pensions for government employes are paid at the cost of the government.

PEACE.

(By W. B. Rubin.)

Nineteen hundred and eighteen years ago the wise men from the east heralded the coming upon this earth of the Founder of Christianity.

In gentle tones He gave utterance to the lasting words, "On earth, peace, goodwill towards men"—a world of truth pithily told, reverberating and re-echoing time and again over the entire earth.

Each year at the Yuletide season that sentiment is taken off the shelf where it has remained, dust-covered, for eleven months. Bedecked in gorgeous colors, it is placarded everywhere and eloquent voices use it as their text for sermons.

However, notwithstanding these words of exhortation, the world has gone on just the same, killing, marauding, and desecrating. There have been wars and conflicts without end. The words have seemed but a hollow mockery, and wrongs have been committed during each succeeding year greater than during the year previous.

For four years the world has been engaged in the greatest war of all. Millions of men have been killed, millions more crippled, and billions of dollars' worth of property destroyed. Hell has been raised and misery has become rampant to such an extent that it will tell upon the progeny of our race for at least a half century to come. Still, during all of this time, as each Christmas came around, we heard the words, and still we saw the same placards, "On earth, peace, goodwill towards men," yet men continued to fight and kill each other.

Recently, in the fall of 1918, PEACE actually came, the war ceased, kaisers and emperors, princes and autocrats abdicated and went into exile.

Now the world is at peace, and it is said that we shall have no more war; THAT PEACE ON EARTH HAS COME in fact.

It is a political peace, and there shall be "Peace on earth, goodwill towards men," for millions have fought and died to bring about this world's peace and disarmament.

But have we peace, REAL PEACE?

Not yet.

Let us take heed, and while we are at the Peace Table arranging for a world's political peace, let us provide, too, for A WORLD'S INDUSTRIAL PEACE.

The world must be safe for DEMOCRACY. "Safe for democracy" means safe for the DEMOCRATS, not the PLUTOCRATS. Therefore, it means that the world must be safe for the TOILER.

Make the world safe for the man who toils, give him peace and equality of opportunity. Make MONOPOLY ABDICATE and send PROFITEERING INTO EXILE. Then the words, "ON EARTH, PEACE, GOODWILL TOWARD MEN," SHALL LIVE IN FULL REALIZATION.

WHY SHIPS FLOAT.

Professor Garret P. Serviss has just answered that old, old question: "Why do iron, steel or concrete ships float?"

Of course, all know that they do float, but many will be hard pressed to explain "why."

Says Professor Serviss:

The great fault of our system of education is its failure to implant fundamental ideas. School pupils are given chiefly fragments of information instead of the keys to knowledge. I doubt whether there is a teacher in the United States who ever thought of explaining to his scholars why any kind of a ship floats. That seems to be regarded as something which can explain itself; everybody can see that ships do float, that fact is established, then why waste words about it?

Yet it is by inquiring into the reasons of the simplest things that science makes its advances. Probably the reason why such explanations as that suggested above are not given to school children is because the children never ask for them. But it is precisely one of the most important of the teacher's around the sun, to the comets coming in and to suggest questions to their minds, for the deepest ignorance is that which is due to indifference and lack of thought.

Suppose that Newton when hit on the head by the falling apple had not asked himself why it fell, but had been content, like everybody around him, to take the fall of the apple as a fact of nature, a way she had that needed no explanation? But Newton's mind leaped from the falling apple to the moon circling the sky, to the earth traveling around the sun, to the comets coming in and going out of the solar system, to the distant stars obeying a common law, and in satisfying his intellectual curiosity he enlightened the human race.

I call this high witness to the utility of seeking the causes and the reasons of the commonest phenomena. And now, to go back to the question, why does a steel or a concrete vessel float? The question itself points out the source of the puzzlement in the asker's mind. He does not wonder why a wooden ship floats, for that appears too simple a matter to need explanation. "It floats," he would probably say, "because it is lighter than water; of course, I can see that; but steel and concrete are heavier than water; then why don't such ships sink?"

Now, stop a moment and analyze that statement. Precisely what is at the back of your mind when you say that a ship floats when it is lighter than water? Evidently you are thinking of the comparative weight of the material of which the ship is constructed, and, knowing that wood will float, you are not surprised that a vessel made of such material should likewise float; but when you turn to steel or concrete, knowing that these materials will not float, you are puzzled to understand why a vessel made of them nevertheless does float. In other words, you ascribe the buoyancy of the ship solely to the buoyant property of its constituent materials.

But in so doing you are making a very great mistake. The true reason why a ship floats is not because it is made of a material intrinsically lighter than wood, but because it is made in such a form that, taken as a whole, it is lighter than a quantity of water equal to its entire bulk or volume would be. Even a wooden ship is not intrinsically lighter than water, for if it were it could defy leaks.

Its planks and beams and spars will float separately, but when they are combined into one structure with the iron and other metals needed in making a ship, and when the necessary ballast is put in, together with the other contents, the whole thing would go to the bottom but for the peculiar shape given to the hull, viz., that of a hollow vessel, which shape enables it to inclose a great deal larger space than a quantity of water having a weight equal to the entire weight of the ship would occupy.

But when the hollow interior of the ship is filled with water the quantity of water displaced by its solid parts, which alone give it weight, is not sufficient to equal the combined weight of those parts, and so the ship sinks.

By giving it a proper shape you can make anything float. An iron pot, if made so large that the weight of the metal in it is less than the weight of a volume of water equal in size or bulk to the hollow pot, will float as long as its interior is not invaded by the water. But put the same quantity of iron into a ball and it plunges straight to the bottom, because now its weight is concentrated within a cubic space less than that which would be occupied by an equal weight of water.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER

(Continued from Page 3.)

for in that way only can they expect to resist the long hours and low wages, which will undoubtedly be attempted, as soon as the Government restriction is lifted."

Don't Fear Labor Surplus.

The Annalist, a magazine of finance, commerce and economics, expresses the opinion that there is "little danger of labor congestion through demobilization," and that "the decrease in immigration, as shown by census figures, offsets the number of returning soldiers seeking employment."

The Annalist acknowledges that large numbers of men will drift into new occupations and many changes will take place, but, taking the proposition as a whole the editor does not accept the theory that there will be a condition which is referred to as a "glutted labor market."

The Federal Bureau of Census is quoted in defense of this position. It is shown that the total immigration during 1915, 1916 and 1917 was far less than in 1914 alone. In the latter year there were 1,218,480 arrivals, while the grand total for the other three years was just under 921,000.

"As unfamiliar as they were with the language and customs of the country, hundreds of thousands of immigrants in normal times were absorbed annually into the Nation's industrial life, with comparatively little friction," it is stated. "Returning soldiers and sailors, knowing the life and tongue of the country, and being set down in sections with which they are most familiar, should disturb the economic balance of the Nation even less."

The editor predicts that "at least 1,000,000 men will be retained abroad indefinitely in order to cope with any emergency that may arise."

The question of women who have been employed in munitions plants at from 35 to 45 cents an hour, is conceded to be a problem.

Wants U. S. to Sell Ships.

Captain Robert Dollar, California shipowner, and a leading opponent of the Seamen's Law, has issued a statement in which the Government is urged to sell its merchant ships to private owners and to then pay these owners the difference between the wage rate of a foreign crew and the wage rate of an American crew.

Mr. Dollar says: "We certainly want to get some ordinary common sense injected into our laws." He expresses fear of competition by Japanese vessels. The doughty captain is an authority on Oriental labor, and only recently he was ordered by the Government to dispense with the employment of Orientals in violation of the Seamen's Law.

When the war started vessels owned by him on the Pacific were flying the British flag, but when the story started that a German raider was in these waters, Captain Dollar became a 100 per cent. American and hoisted the Stars and Stripes.

There isn't much to choose between the union man who regards the payment of dues as his sole obligation to organized labor and the non-union man who assumes no obligation at all—and what choice there is favors the latter, rather.

THE FREEDOM OF THE SEAS.

(Continued from Page 2.)

Beyond these areas the seas are "free." That is to say, beyond these areas all States have an equal right to use the sea, free from the jurisdiction of any foreign State not founded upon special agreements. The high seas are the world's highway where, subject to detailed exceptions too complex and numerous for statement here, the ship and its passengers or crew are free from the control of any State save that whose flag it flies. This is, par excellence, "the freedom of the seas."

Of more acute interest just at present, however, are the rights of belligerents at sea. In July, 1914, these rights had been defined by the Declaration of London. Although never ratified, and hence unauthoritative in an official sense, this convention of 1909 nevertheless stated better than any other international document the law of war at sea.

Under the Declaration of London and the common international law which formed its interpretation and its supplement, enemy ships, and enemy cargoes in enemy ships, were open to capture and condemnation as enemy property by the prize courts of the captor. Neutral vessels which attempted to break through blockades of enemy coasts which had been duly established and notified to the neutrals, and neutral vessels which carried cargoes more than half of which were contraband, or which performed unneutral service by carrying enemy personnel or dispatches or by participating in military operations in other designated ways, were similarly liable. Postal correspondence was declared inviolable in all cases. Certain lists of articles were declared to be contraband by nature—so-called "absolute" contraband—and as such were subject to capture, even though they were neutral property, if destined for the enemy State, its forces, or territory in its occupation. Other articles were listed as "conditional" contraband as being useful for civilian as well as military purposes, and were subject to capture only if proved to be destined for the enemy Government or its armed forces. Still other articles were declared to be entirely free of contraband character and could never be made contraband, while provision was also made for transferring articles from the list of conditional to that of absolute contraband by reasonable notification on the part of the transferring State. Religious, charitable and scientific vessels were declared to be immune from attack or capture, and this immunity was extended to petty fishing and coast-trading vessels. Neutral ships might be visited and searched in enforcement of the substantive belligerent rights of capture, and an attempt to escape would void the immunities from destruction previously enjoyed. These immunities were, in law, considerable, for the destruction of either enemy or neutral merchant vessels which had been captured could take place without adjudication in a prize court only in strictly limited cases and after providing for the safety of the ship's personnel.

The fact that the Declaration of London was not officially binding led to some parleying among the belligerents in 1914 as to its application. As it turned out, no belligerent has applied the Declaration as it stood; with the result that, subject to the general tenor of the Declaration and the historical law of prize, and subject more especially to its own general temper and ethical standards and commercial or political interests, each nation has written its own maritime law of war during the last four years—under more or less effective protest and retaliation from opposing belligerents and suffering neutrals. Germany and Austria have torn up the restrictions in respect of warning before sinking, the restrictions on sinking without adjudication in a prize court, and in respect of provisions for the safety of passengers and crew In a peculiarly vicious way the Central Powers have offended against the time-honored chivalry of the sea; and of all the outcry against Germany that of the seamen is most unpolitical and sincere. The Allies on their part have abandoned entirely the distinction between absolute and conditional contraband, expanded their powers of blockade, and rewritten step by step the lists of contraband to the extent of wiping out the free list and making all articles contraband irrespective of their destination for civilian or military use. The Central Powers have not failed to take similar steps.

The cause of all this is not to be found merely in the fact that the Declaration of London had not been ratified. Even if it had been accepted and applied at the start by all concerned, it could not have been maintained without stultifying a large part, if not the greater part, of British belligerent action. The facts of engineering technique and social evolution would have wrecked such an attempt, as they have wrecked the effort to apply it notwithstanding that it had not been ratified. There are no materials or persons not part of the belligerent action of the State to-day; the whole State fights with all its people and materials, its industries and trade, and the distinctions written into the law of 1909 seem unreal to-day. Raw cotton and rubber were included in 1909 in the list of articles which were not to be declared contraband at all, on the ground that they could not possibly be relevant to the military operations of the State.

These reasons, however, apply chiefly to the alterations made in the law by the Allies. For the German variations from the Declaration there is one main cause. Much of its illegal action Germany could hope to defend in some measure because of ambiguities or omissions in the law of 1914 regarding the warlike or peaceful (i. e., commercial) character of a given enemy vessel and the rights of merchantmen in resisting capture or presumptive destruction; but for the greater part of its action there is only one, though an all-sufficient explanation, and one quite outside the legal realm, namely, the control of the surface of the sea by the Allies. A verdict on these variations on both sides goes back to the question of the justice of the respective causes themselves. Both parties acted more or less illegally as judged by the law of 1914, and one illegality has about as much merit as another; but upon the ethics of the case a different judgment must be passed.

There is another hardly less fundamental issue involved in the question of the freedom of the seas; the age-long conflict of maritime and continental power, of the naval state and the military state, of the navy and the army. The Declaration of London seriously restricted the former in war, and it is an open question whether the framers of that document did not more or less unwittingly lend themselves to a set of rules which, if carried out, could result only in sacrificing the freedom of Europe to the freedom of the Atlantic. If Great Britain and France had conformed to the Declaration of London, with its severe limitation of continuous voyage to the field of absolute contraband (thus prohibiting the seizure of conditional contraband, which included "flying machines" in 1909, destined, for example, for a neutral merchant in Amsterdam), its large free list, and its inviolability of postal correspondence, the German submarine warfare and the German violations of the law of the sea might never have been necessary as measures of retaliation—and Belgium might now be a German province.

Countless other minor aspects of the question might be considered, including the strewing of floating mines, the declaration of closed sea areas, the enforced deviation of neutral ships from their courses, and the use of neutral waters or ports as bases of belligerent operations. In all such cases the law as it stood at the outbreak of the present war has been more or less altered by various belligerents and neutrals; and an agreement will have to be reached at the end of the war upon the extent to which the law shall be revived or rewritten and, if rewritten, to what effect. There must also be a restatement of the law upon the extent and quality of the power of a State over adjacent waters in rivers, canals, straits, bays, and the marginal sea, as part of the general restatement of the law of nations which is so badly needed. In these revisions all the interests and policies of the continental and maritime States will find room for action, but the result should be a redefinition of the freedom of the seas by a restatement of the legitimate extent of State jurisdiction over the sea and its arms as to all persons and ships entering those areas, or over an enemy or neutral vessel or cargo on the high seas in time of war.—By Dr. Pitman B. Potter of the Carnegie Endowment for International Peace, in the New York "Nation."

The San Francisco Bay steamer "Sehome" sank in San Pablo Bay at 8:30 a. m., on December 14, after a collision with the steamer "General Frisbie" in the dense tule fog. The "General Frisbie," crowded with marines bound for the football game, crashed into the port side of the "Sehome," which was proceeding under a slow bell through the fog on its morning run from San Francisco to Vallejo with 125 passengers. Realizing that his vessel was doomed, Captain Fred Olsen of the "Sehome," ascertained that the damage to the "General Frisbie," whose bow stuck fast in the gap in the "Sehome's" port side, was not sufficient to cause that steamer to sink, instructed his passengers to climb over to the "General Frisbie's" decks, as both steamers were locked together. In this manner all were saved. There are five automobiles on board the "Sehome" where she lies in twenty feet of water on the side of the channel. Captain Thomas P. H. Whitelaw, veteran wrecker, is negotiating to attempt the raising of the "Sehome" within the next few days. The "Sehome" was built at Portland, Oregon, in 1889, and operated there for two decades, and then was sold to the Monticello Steamship Company. After operating in the San Francisco-Vallejo service until 1914, the craft was entirely rebuilt and was valued at $100,000. The vessel was 192 feet in length, 32 feet in width and 10½ feet deep.

F. E. Booth & Co. of San Francisco have purchased the pilot boat "California" from the Bar Pilots' Association and will use it in conjunction with its fishing fleet. Although the price has not been announced it is rumored that it was slightly less than $10,000. This is considerably below the original cost of the boat, which is one of the best power craft in local waters.

QUEEN ELIZABETH'S NAVY.

A few words in detail may be spared to the constitution of the fleet which was about to accomplish so splendid a service. [That of meeting the Spanish Armada in 1588.] In ordinary times, one or two second-class vessels alone were kept in commission, which discharged the duties very imperfectly of Channel police. The Navy did not exist as a profession. It was the Queen's policy to appear as little as possible in any work that had to be done, and to leave it to privateers. When officers were wanted, they were chosen from those who, like Sir Francis Drake, had distinguished themselves as adventurers. The crews were engaged by the week, by the month, or for some special service. A commission was appointed in 1583 consisting of Burghley, Walsingham, Howard, Drake, and Frobisher, to examine into the condition of ships and stores, and so to organize the yards at Portsmouth and Chatham, that a squadron could be held ready for sea if suddenly called for. The whole Navy was then thoroughly overhauled and repaired. The charges for its future maintenance were divided into ordinary and extraordinary. The first covered repairs of all kinds; wages of shipwrights, carpenters, clerks, watchmen, and cost of timbers, ropes, anchors, mooring cables, and other necessary dockyard expenses. For all this the Queen allowed four thousand pounds a year. She thought the sum excessive, but it could not be brought lower. The second, or extraordinary charges, covered special expeditions for which in every instance a particular estimate was made by the Council, with the lighter cordage, canvas, provisions, and other perishable stores of which the consumption varied with the nature and extent of the service. It included also the building of wharves, sheds, and storehouses, and also of new ships, of which it was then decided that one at least must every year be added to the fleet. Construction of this kind was done by contract. The ships were expected to last in good condition thirty years at least. The "Bonaventura," a vessel of 600 tons, was built in 1560. She was with Drake in his expedition to the West Indies in 1586. She carried his flag at Cadiz in 1587. She had been engaged in every service of consequence which had been undertaken since the Queen's accession. She was caught in a gale in the beginning of 1588, and ran on a sandbank at the mouth of the Scheldt, when, to use Lord Howard's words, "it was thought impossible, unless she had been made of iron, that she should not have been severely injured if not lost." She was got off "without a spoonful of water in her well"; and after a hard life of twenty-eight years, the Admiral said, "there was not in the world a stronger ship."

The cost at which vessels of this kind were constructed indicates that although contractors did their work well, they were contented with moderate profits. The "Rainbow," a ship of 500 tons, was set afloat fit at all points for sea for £2100; the "Vanguard," also of 500 tons, for £2600—or, allowing for the difference in the value of money, about £13,000 and £16,000 respectively.

The wages of an able seaman under Henry VIII had been sixpence a day, or calculated in meat, drink, and clothing, according to the prices of the beginning of the sixteenth century, equal to six shillings of our money. Out of this he found his own living. . . .

At the recommendation of the committee of 1583, five new ships had been added to the Navy, larger than any which were already afloat; the "Ark" and the "Victory" of 800 tons, the "Bear" and the "Elizabeth Jonas" of 900, and the "Triumph" of a thousand. The four last named had been commissioned before 1588. They had been constructed upon a new principle, introduced by Hawkins. The high sterns and forecastles were lowered, the keels lengthened, and the lines made finer and sharper. Old seamen shook their heads at the innovation, and foretold the usual disasters. They would be too crank, it was said, to carry sail. They were fit only for smooth water, and would founder in the heavy seas of the Atlantic. The Queen having paid dear for them, shrunk from experiments which might show her to have countenanced an expensive folly, and had preferred so far to keep them safe at their moorings in the Medway.

This was the condition of the Royal Navy of England when called on to face the most powerful fleet which had existed from the beginning of time—Froude's "History of England."

NAVY PROGRAM FOR 1920.

Twenty-nine battleships, manned by 40,000 men, will be maintained in active service after next March 1, according to the plans of the Navy Department as disclosed by Rear Admiral Coontz, acting chief of operations, in testimony before the House Naval Committee in connection with the 1920 naval appropriation bill. Eight other battleships will be held in reserve, he said, and will be manned by a two-thirds complement.

Other units of the navy to be commissioned after March 1 were given by Admiral Coontz as follows:

Seventeen cruisers for active service, with two or five in reserve, and manned by 12,000 men; twenty-four vessels in the patrol force, including gunboats and other craft, for which 3900 men would be required; 165 destroyers, 20,600 men; ninety-nine submarines, 4500 men; seventeen supply boats, 2498 men, 768 submarine chasers, 5400 men; seventeen Eagle boats, complement not given; forty-two transports, 20,000 men; thirty-seven mine sweepers, 2400 men, and eighteen submarine and destroyer tenders, 5200 men.

An aviation force of 6000 men, including aviators, ground officers and mechanics, is also planned after March 1, the admiral said, while the force of miscellaneous employees, including radio men, would number 20,000. Thirty thousand apprentice seamen will be in training under the navy's plans.

"Some of these war profiteers really believe that they are honest," said Secretary McAdoo the other day. "They look on their work exactly like a woman I know. She's a perfectly good woman, a churchgoer, and all that sort of thing, who wouldn't cheat any one out of a penny. But this same woman borrows eggs from the neighbors when eggs are 60 cents a dozen and pays the eggs back, egg for egg, when eggs are 30 cents a dozen."

Labor News

Because organized brewery workers have assumed jurisdiction over workers employed in grain mills, with the approval of the A. F. of L. executive council, a change in name is necessary. This trade union will henceforth be known as the International Union of United Brewery, Flour, Cereal and Soft Drink Workers of America. The union also has jurisdiction over yeast workers.

The influx of women in wage-earning capacities because of the war is indicated by the annual report of the Civil Service Commission, which states that in the last fiscal year civil service examinations were taken by 137,620 women, as compared with 25,457 in the previous year. This, the report points out, is an increase of 441 per cent. in the number of women applicants, whereas the number of men increased only 122 per cent.

A contract between the National Zinc Company and Local No. 137 of the International Union of Mine, Mill and Smelter Workers of Springfield, Ill., provides for union recognition. No employee shall be permitted to work unless he had a paid-up union card. Where an employee expresses his intention of leaving his employment "the foreman of the department in which he is employed shall require said employee to show his union card or a statement from the secretary of the union before he is permitted to draw his time."

Massachusetts is undertaking to aid the United States Government in its attempt to make agriculture attractive to returning soldiers. The report of the special commission appointed by Governor McCall favors State acquisition of 200,000 acres of land to be divided into 40-acre farms. Secretary of the Interior Franklin K. Lane estimates that 1,000,000 men in the National army came from farms; and it is hoped that at least that many will go upon farms when peace comes. In Massachusetts there were 30,000 farm laborers and 36,000 farms before the war.

After the first of the year employees of the telegraph companies, now controlled by the Government, will receive annual vacations with pay at their regular ratings, as follows: All regularly assigned employees who have been in the service of the company continuously for two years or more shall receive two weeks' vacation and for one year's continuous service, one week's vacation. These leaves can not be saved up from year to year and thereby extended into a longer period. If the vacation is not taken, no additional compensation will be allowed.

The Pacific Coast Metal Trades Council has voted in favor of amalgamating all metal trades international unions into one organization. Metal trades councils will be asked to vote on the project and if the decision is favorable the Metal Trades Department of the American Federation of Labor will be asked to adopt the plan at its Atlantic City convention in June. The convention rejected the award of the United States Shipping Board (known as the Macy board). Advocates of amalgamation claim that this policy would check any attempt to play Eastern ship yards against those located on the West coast.

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

The GREATEST MOTHER *in the* WORLD
holds a sacred place of honor within our homes and in our hearts

THE message that the American people stand as one behind our brave boys and gallant Allies, is the most cheerful "Merry Christmas" we can send them.

Let us make this a Red Cross Christmas—let us see to it that every member of every family joins the Red Cross. She is warming thousands, feeding thousands, healing thousands from her store—the greatest Mother in the World.

All you need is a Heart and a Dollar
RED CROSS CHRISTMAS ROLL CALL
December 16—23

Home News

The number of places in New York State where intoxicants can be sold legally during the fiscal year ending October 10, decreased 6560, and the consequent loss in revenue was $4,775,854.

The city of Denver on November 1 took over the water plant, paying the Denver Union Water Company for its complete equipment of mains, reservoirs, settling tanks and water rights acquired during fifty years, $13,922,836. This marks the end of a twenty-year fight.

The University of Washington has established a course in employment management, with particular reference to shipbuilding and lumber industries. The purpose is to train men to form a connecting link between the business and the men employed with a view to adjusting all differences.

A National Federation of State Unions of Co-operative Societies, and the starting of a movement to form a National Co-operative Wholesale Company to be located at Chicago, are two of the results that have followed the national conference of co-operators at Springfield, Illinois, in September.

Recommendations for water power development in northern and central California, made to the War Industries Board, by Major George F. Sever of the United States Army Engineer Corps, call for an increased production of about 170,000 horsepower in the next three years at a cost of $15,000,000 to $20,000,000.

Deaths from influenza, according to an estimate of the Census Bureau, greatly exceed the deaths among the American troops abroad. The number of deaths from influenza and pneumonia in the camps in this country are nearly equal to the number actually killed in battle among the expeditionary forces.

It costs the United States Government 50 cents a day to feed a soldier in camps in this country. Twenty years ago, according to the War Department, the daily ration — three square meals—cost 13 cents. During the Spanish-American war the ration cost 12.81 cents a day. In the campaign in Mexico it cost 25 cents a day.

The Union Pacific Railroad has set aside about $750,000 for building snow sheds in Wyoming. These sheds are made of reinforced concrete, and are built in such a way that they can be taken apart and moved to any portion of the road where protection from snow is most needed. Four of these concrete sheds are being built, the largest of which is 4470 feet.

Extension of the period of Government control of railroads for five years, until January 1, 1924, was recommended to Congress by Director-General McAdoo. Advantages of this, McAdoo said, are that it would take the railroad question out of politics for the present, give time for carrying on an extensive program of improvements, and provide opportunity for a fair test of unified control to indicate the permanent solution of the railroad problem. "The President has given me permission to say that this conclusion accords with his own view of the matter," McAdoo said, in concluding a letter addressed to Senator Smith of South Carolina and Representative Sims, chairmen, respectively, of the Senate and House Interstate Commerce Committees.

Domestic and Naval

Business men of St. Petersburg, across the bay from Tampa, Florida, are planning the organization of a shipbuilding plant with a capital of $500,000 to build barges and tugs.

Charles Piez, vice-president and general manager of the Emergency Fleet Corporation, is to succeed Charles M. Schwab as director-general of the corporation, it was said at headquarters of the Shipping Board in Washington, D. C.

Henry Ford announces that as soon as his plant at River Rogue has completed its Government contract for the "Eagle" boats it will be devoted to the "manufacturing" of canal boats on a large scale to develop inland waterways commerce.

Six men of the crew of the armored cruiser "Brooklyn" were killed and thirty others injured, some seriously, in an explosion of coal dust aboard the vessel last Monday at Yokohama, Japan, where she was coaling. The Navy Department was so informed in a dispatch from the commanding officer of the Asiatic fleet, of which the "Brooklyn" was flagship.

With the consent of the Navy Department, the commander of the U. S. cruiser and transport force has made public figures showing exactly the proportionate share of troops convoyed to France in American vessels. Of the entire Army of 2,079,880 men taken over, the statistics show 46¼ per cent. were carried in American ships, 43½ in British and the balance in French and Italian vessels. Of the total strength of the naval escort guarding all these convoys, the United States furnished 82.3 per cent., Great Britain 18⅛ per cent. and France 3⅛ per cent. In actual numbers of men transported, 912,082 were carried in American naval transports and 40,499 in other American ships; 1,006,987 were carried in British bottoms and 68,248 in British leased Italian ships, and 52,000 by French and Italian ships. From May, 1917, to November 11 last there were 391 sailings of American naval transports, 123 of other American troopships, 546 of British ships, and eighty-two of other ships. Not a single soldier of those carried in United States naval transports was lost.

There is much uncertainty anent the insurance of concrete vessels. Underwriters are not able to secure any data which will be of help to them to make a rough calculation as to the hazard in question, but after all this is not a great help, because a great proportion of the risk will arise out of damage due to particular average, and there are no means available of ascertaining how the vessels would stand damage from standing, for example. It is said that repairs would be more easily effected with concrete ships than with steel ships, but, on the other hand, there is no doubt that, in case of any disaster, the underwriters would be entirely in the hands of the surveyor, and it would be impossible to say how repairs can be effected, or what they would cost. Most ports can handle repairs to steel vessels, but it must be understood that, with a new venture like the construction of concrete ships, any repairs would have to be done by special experts, who would not be available in all ports of the world, so that delay and expense in repairs would be important parts of the work.

The Public
A Journal of Democracy
Poverty is A Crime!
IT isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was
"The Crime of Poverty"
It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.
Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.
Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

INFORMATION WANTED.

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S. "Davy," is inquired for by his mother. Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal.
11-6-18

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City. 6-5-18

Hans Herman Hansen, a native of Bornholm, Denmark, about 30 years of age, last seen at San Francisco, Cal., in 1914, is inquired for. Any one knowing his whereabouts please notify his sister, Mrs. Marcher; address, Modesto, Cal. 3-20-18

News from Abroad

The House of Commons rejected by a vote of 196 to 115 a motion made by John Dillon, chairman of the Nationalist party, that the Irish question should be settled without delay on President Wilson's principle of self-determination.

A concession to lay and operate a cable from Rio de Janeiro to Cuba has been granted by the Brazilian Government to the Central and South American Telegraph Company. The completion of this line will completely encircle South America with telegraphic communication.

The Saskatchewan provincial legislature is expected to pass a law making it a punishable offense for any one suffering from social disease to marry. It is expected that a government certificate of mental and physical fitness will be required before marriage can take place.

The bill qualifying women for membership in the British House of Commons has passed the third reading in the House of Lords, after an amendment to permit peeresses in their own right to sit in the House of Lords and vote had been rejected by a vote of 33 to 14.

The proposal to build ships in India has, upon investigation, been abandoned because of the lack of skilled labor for building wooden vessels, and the necessity of importing practically all iron and machinery. Available plants and labor are more productively employed in other branches of industry.

During the war 2475 British ships were sunk with their crews and 3147 vessels were sunk and their crews left adrift, according to a statement by Sir Eric Geddes, First Lord of the Admiralty, in an address in support of a fund by the women of the empire to erect a memorial to British merchant seamen. Fishing vessels to the number of 670 had been lost during the period of hostilities and the merchant marine service had suffered casualties exceeding 15,000 men, Sir Eric added.

The origin and development of the Franco-Russian alliance may now be studied in a Yellow Book lately published by the French Government. The document comprises 107 letters exchanged between the foreign office and successive French ambassadors at Petrograd. The four sections of the correspondence deal respectively with the origins of the alliance between August, 1890, and January, 1892; the negotiations regarding a military convention in 1892; the conclusion of the convention in 1893, and the naval agreement between France and Russia in 1912.

During the war twelve spies were shot in the Tower of London, according to the report now current. Carl Hans Lody, alias Charles A. Inglis, who at one time was a resident of Omaha, Neb., was the first to be executed. The women spies were sentenced to death, but both were reprieved, the sentences being commuted to long prison terms. One of the women, Lizzie Werthe, regarded as very dangerous, was tried in company with a man named Rowlands. Rowlands was executed. This couple made frequent journeys between London and Rosyth, Scotland, and obtained information regarding the movements of the British fleet. This information, however, it is declared never reached Germany.

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

257 HANSFORD BLDG., 268 MARKET STREET

Under Capt. Christensen's personal and undivided supervision, pupils of this favorably known school are taught all up-to-date requirements for passing a successful examination before the U. S. Inspector.

THE SEAMEN'S JOURNAL.

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 16. SAN FRANCISCO, WEDNESDAY, DECEMBER 25, 1918. Whole No. 2518.

THE WAY TO SOCIAL JUSTICE.

A Review of the World-wide Co-operative Movement.

That the workers must unite as producers—as workers per se—is evident to all who think. That they must unite as citizens—politically—to secure beneficial legislation is generally conceded. That they should unite as consumers is only beginning to be recognized in America, although it has made striking progress in the old world. But the tremendous power that will arise from a scientific co-ordination of all the three forces—Unionism, united political action, and co-operative trading—is understood by few indeed. To-day hordes of useless agents, bankers, auctioneers, storekeepers, etc., are rapidly becoming wealthy out of the profits wrung directly from the wages of the workers. Most of this wealth can be saved to the workers as soon as they put into practice the principle of co-operative trading. The following instructive paper on this subject was especially prepared for the Journal by Mr. James P. Warbasse, President of the Co-operative League of America.

Modern industrial life tends to creat human hostilities. Co-operation is opposed to this. The co-operative movement aims to set people working together for their common good. It is based upon the natural human impulse of mutual aid which is the most salutary force in society. Its purpose is to substitute co-operation for antagonism. This it proceeds to do through a democratic movement which invites all the people of the world to join it, and to unite in administering their own affairs. It is making people their own storekeepers, wholesalers, manufacturers, bankers, insurance companies, mine owners, and administrators of their civic affairs. It is the movement which solves the problem of the high cost of living. All this it does. If it is an utopian dream, it is a dream come true, for it is an accomplished fact. Its merit is that it is practical. Its philosophy is natural.

In looking over the whole field of human interests we find one thing which is coming to all beings. They differ in religion, occupation, productivity, and habits of life, but all are consumers. All things of use should have for their ultimate destiny to be consumed, to go into the elements of society—to nourish, sustain, develop, beautify. Food, housing, clothing, music, art, recreations, and learning are the great fundamental needs.

The important requisites for co-operation are loyalty, and friendship toward one's fellow men. A group of people who are capable of fidelity organize as a consumers' society to supply for themselves their simplest wants. They buy at wholesale in common such things as eggs, butter, fruit, vegetables, coal, meat and coffee. They take for themselves the profit which had previously gone to the private merchant. Their society grows larger, and presently they run their own store, and distribute to themselves all of their foodstuffs, clothing, and household goods. This is the simple and unostentatious beginning of an organization of infinite possibilities. The basis of such an organization must be democratic; otherwise it fails. The necessary share capital must be raised, preferable by the one-member-one-share principle. The essentials for success are: (1) One member one vote; (2) interest not above the current or legal rate; and (3) returns to members based on the amount of purchases which each member makes.

In the course of time, after a number of such societies have developed, they will find that the total amount of purchases they are making is so great that they can unite in the organization of a wholesale society, and thus take the next step and cut out the profit of the wholesaler. When still more societies have grown up and the membership has become sufficiently great, the wholesale society, instead of buying from the importer and manufacturer, imports and manufactures for itself. When this last step has been taken the economic problem is solved; the gamut is run; people are then producing and distributing for themselves; and are no longer at the mercy of competitive business.

Still, securing commodities at the cost of production is the least of the purposes of the co-operative movement. It aims at more important things. It takes advantage of the organization of people who have common needs, and introduces insurance against sickness, death, unemployment, accidents, and old age. It provides pensions for motherhood, makes loans to members, carries families on credit in the event of sickness or unemployment, organizes banking, provides housing, recreations, clubhouses, medical and nursing care, hospitals and sanitariums. And beyond this there is still a greater benefit which accrues to the co-operator. It is not alone that the things he needs are made more easily accessible to him; that he is freed from the dangers and costs of diseased and adulterated food; that he is spared exploitation by the agencies of profiteering; that pensions, insurance and housing are made possible for him; that recreations, art and education are rendered accessible. Co-operation does a greater thing than all these. It awakens in the soul of man a new spirit. It makes him a co-operator. It takes hold of the fundamental and primitive instincts—to help one's fellow man, to be kind, to be generous, to render mutual aid—and encourages them. It organizes a society in which people learn by practice that the concern of one is the concern of all, and that no man can cheat or be cheated without his neighbor also suffering.

What has co-operation done? In England in 1844 twenty-eight poor weavers with no better destiny than the poorhouse before them, organized the Rochdale Equitable Pioneers Society, with a store with only four commodities, keeping open only in the evening. They had the vision and the philosophy. From that small beginning there has never been a recession now for three-quarters of a century. Year after year unfailing success has crowned the movement. To-day the co-operative movement in Great Britain embraces one-third of the total population. For forty years the movement has been growing five times faster than the population has increased. During the war the increase has been ten times faster.

At the present time, co-operative societies of Great Britain distribute $1,000,000,000 worth of commodities to their members annually. The "profit" or, more properly speaking, the savings to their members amount to $100,000,000 a year. Of this amount $65,000,000 is returned in cash to the members in the form of "dividends." The British Wholesale Society supplies 1200 societies. It owns its own steamships. It has fourteen great warehouses. It gives lavishly of its great resources toward welfare work. It is the largest purchaser of Canadian wheat in the world. Its eight flour mills are the largest in Great Britain. These mills produce thirty-five tons of flour every hour for the people who own the mills. The co-operators of Glasgow own the largest bakery in the world. The British Co-operative Wholesale owns sixty-five factories. Their soap works make 500 tons of soap a week. They produce 5,000,000 pairs of boots annually. They conduct three great printing plants. Their 24,000 acres of farms in England produce vast quantities of dairy products, fruit and vegetables. They have recently purchased 10,000 acres of the best wheat lands in Canada. They own their own coal mines. Their last purchase was the Shilbottle coal mine, bought only during the past year. They own 2300 acres of tea plantations in Ceylon and vineyards in Spain. In Africa they control vast tracts of land for the production of olives from which oil for their soap factories is procured.

These organizations of consumers—springing from the little society of Rochdale—now bring their own currants from Greece to be made into plum puddings in their own factories. The British Co-operators now produce almost every commodity. Watches, furniture, tinware, machinery, clothing, tobacco, chemicals, leather-goods, corsets and brushes are among their products. Their total output is five times greater than that of the private manufacturers in the manufacturers' association. Their welfare work embraces almost every branch of human service. They conduct life-saving stations on the coast, and administer large funds for the relief of sufferers from famine and unemployment. Their banking department is next to the Bank of England in importance. One-half of the industrial life and accident insurance business in Great Britain is done by the Co-operative Society, and at one-tenth of the cost which the profit-making companies pay.

The British Wholesale Society did a business of $217,000,000 in 1914; in 1917 it was $300,000,000. The Scottish Co-operative Wholesale Society is a federation of 264 consumers' societies. In 1916 it did a business of $75,000,000, manufactured $24,000,000 worth of goods and carried a reserve and insurance fund of nearly $5,000,000. The British Society employs about 200,000 people. This vast business is carried

ers for the 15,000,000 people who are producing and distributing for themselves.

The continental movement is still greater. Germany, France and Italy have more societies and membership than England, Scotland and Ireland. Russia, before the war, was weak in co-operative societies. But with the growth of the revolutionary movement the societies increased until the Russian movement now has become the greatest in the world. There are in Russia 50,000 co-operative societies, with 15,000,000 members. Upon the basis of the head of a household representing five people, this means 75,000,000, which is nearly one-half of the population. The People's Co-operative Bank in Moscow does a business of $1,000,000,000 yearly.

The Belgian Co-operative Movement is peculiar. The surplus savings are not returnable to the members in the form of cash but are employed for social welfare purposes. These funds are used for doing for the members of the co-operative societies what the socialized state does for the people in Germany. Old age pensions, life insurance, insurance against sickness and unemployment, maternity benefits, and medical and nursing care are provided. Those beautiful buildings in Belgium, "the houses of the people," are owned by the co-operative societies. They are community centers, used for meetings, dramatic presentations, forums, schools and recreations. This movement of the people has been doing in a voluntary society what the political state in Germany has been doing. In the first instance the people control their affairs; in the second instance the state controls.

All of the countries of Europe except Turkey have progressive co-operative movements. In Denmark, more than three-fourths of the population are embraced in co-operative societies. This little country is rapidly becoming a nation of co-operators and is already developing a superior culture.

During the war the co-operative movement has saved the people of the suffering countries from being quite at the mercy of the profiteers. At the beginning of the war when private tradesmen in England had put up the price of sugar to 12 cents a pound the co-operative societies continued to sell it to their members at 5 cents a pound, and people stood in lines waiting to join these societies. The countries which had a co-operative movement and in which the profiteers did not dominate, appointed the co-operators to administer food control. This was done in Switzerland, Denmark, and Holland. Russia did it immediately after the revolution. France, Germany and Austria have more recently done it. The French Government has this year gone so far as to promote the organization of co-operative societies among the soldiers. These societies run their motor vans among the camps and supply the soldiers with the things which formerly private tradesmen had made profits of from 20 to 200 per cent. in supplying.

In America we have a rapidly developing movement. While there are all kinds of spurious co-operative organizations, there are fully 1000 true co-operative distributive societies. There are splendid groups of societies in the Northwest and throughout the Northern States. Another group has developed about the United Mine Workers in the Central States. In Pennsylvania, West Virginia and Ohio are some of the oldest and most successful societies. Throughout the rest of the country are scattered organizations. The Southern States and Eastern States are poorest in co-operation.

Aside from these distributive societies in the United States, there are five co-operative wholesale organizations, one of which has gone into manufacturing. This wholesale organization at Seattle, Washington, has organized a grist mill and two milk condenseries. It also conducts a successful laundry.

A co-operative society is started by a group of people, preferably belonging to organized labor, each making a contribution toward the share capital. Shares usually are placed at a valuation of from $5.00 to $25.00. Some societies charge less, some more. Commodities are bought at wholesale and sold at the prevailing retail market price. Out of the surplus savings which accumulate, a certain percentage is used to pay interest on capital, a certain amount is set aside as a reserve fund, part is appropriated for education and propaganda, and the balance is either used for general welfare purposes or is paid back to the members as a savings-return. In Great Britain for the average family this saving usually suffices to pay the rent. This means that by belonging to the co-operative society the society gives house rent free. Most societies require that only a small deposit be paid down to join. In England it is 25 cents. The savings returns, or "dividends" as they are called, are then applied to the payment for the share until it is fully paid for.

The savings system is usually declared quarterly. The more the family buys at the store the more money it gets back at the end of the quarter. The store should not sell on credit. The society should maintain active committees on management, and on education and recreations. No society should start without first getting advice and instructions from some other successful society or some central organization. This is the function of the Co-operative League of America.

People who are capable of solidarity should seize upon this great growing movement and make it an instrument for their economic redemption.

DANISH-ICELANDIC AGREEMENT.

The following text of the proposed Law of Confederation, to go into effect December 1, regulating the political relations of Denmark and Iceland, is translated from the Christiania Stavanger Aftenblad.

Denmark and Iceland are free and sovereign states united by a common king.

Danish citizens in Iceland are to enjoy equal rights and privileges with the citizens of Iceland, and vice versa.

The citizens of each country are exempt from military service in the other country. Access to fishing within the maritime jurisdiction of both countries is equally free to Danish and Icelandic citizens, regardless of residence.

Danish ships in Icelandic harbors have the same rights as Icelandic ships, and vice versa.

Denmark will act in Iceland's behalf in foreign affairs. In the Ministry of Foreign Affairs there will be a representative appointed in consultation with the Government of Iceland and familiar with Icelandic conditions. Attaches who are well informed on Icelandic affairs shall be appointed to the already existing consulates and legations. All agreements entered into by Denmark with foreign countries and already published shall, in so far as they concern Iceland, be in force for that country also. Agreements ratified by Denmark after the proposed Law of Confederation has gone into effect shall not be binding upon Iceland without the express consent of the Icelandic authorities concerned.

Until such time as Iceland shall decide to take charge of the inspection of fisheries in whole or in part, this duty will be performed by Denmark under the Danish flag. The monetary system shall continue to be the same for both parties as at present, so long as the Scandinavian monetary system exists. Should Iceland desire to establish her own coinage, the question of acknowledgment by Sweden and Norway of the coins and notes stamped in Iceland will have to be settled by negotiation with those countries.

Denmark's Supreme Court has jurisdiction in Icelandic cases until Iceland shall decide to institute a supreme tribunal of her own. Until then one member of the Supreme Court shall be an Icelander.

Matters of importance to both countries, such as coinage, trade, customs, navigation, mails, telegraphs and radio telegraphs, administration of justice, weights and measures, as well as financial arrangements, shall be regulated by agreements of the authorities of both countries.

The sum of 60,000 kroner contributed annually by Denmark to Iceland shall be discontinued, and instead Denmark shall establish two funds of 1,000,000 kroner each, one at the University of Copenhagen and one at the University of Reykjavik, for the promotion of intellectual intercourse between the two countries.

There shall be established an advisory body of at least six members, one-half from Iceland and the other half from Denmark, to be appointed by the Alting and the Rigsdag respectively, to deal with any bills brought forward in the Parliament of one country which also touch the interests of the other.

If differences of opinion should arise concerning the provisions of this Law of Confederation which cannot be adjusted by the Governments, they shall be laid before a court of arbitration consisting of four members, two to be appointed by each country. This court of arbitration shall settle differences by a plurality of votes, and in case of a tie the matter shall be submitted to an arbitrator appointed alternately by the Swedish and the Norwegian Governments.

This Law of Confederation may be revised until the year 1940 upon the request of either the Rigsdag or the Alting. The agreement may be abrogated only by a two-thirds vote of each Parliament, which must afterwards be confirmed by a plebiscite.

Denmark will communicate to foreign powers its acknowledgement of Iceland as a sovereign power in accordance with the provisions of this Law of Confederation. At the same time Denmark will announce that Iceland declares itself to be perpetually neutral and has no naval flag of its own.

SUBSTITUTE FOR GASOLINE.

One of the most interesting commercial ventures recently undertaken in South Africa is the manufacture of natalite, or motor spirit, which, it is claimed, will probably in time largely displace petrol (gasoline) for driving machinery and particularly motors. Natalite is made from treacle obtained from the sugar estates, which is brought to the siding at Merebank and then drained into 250,000-gallon tanks. Thence the treacle is led through pipes into mixing tanks, and then run into large vats, whose holding capacity is about 10,000 gallons. Here it is fermented. Thereafter the treacle is pumped up into a receiver on the top story, and the wash turned into a still. From this receptacle it passes into a heater built in columnar form, and after certain automatic regulations the spirit is separated from the wash rising in the column, while the wash, known as dunder, emerges from the bottom still into a tub, when it is carried through piping on to the company's land for fertilizing purposes. The spirit vapor passes through two copper columns and a still, in which the "good spirit" is separated from the "best" of seventy over proof. The best grade is used for the preparation of natalite, the weaker for making methylated spirit. Finally, after the different qualities have been pumped into the mixingroom and dealt with, they are "racked off" in various sized drums and tins.

Plenty of worms live in the sea, and some of them are very beautiful creatures. But the so-called "silkworm of the sea"—the designation being purely figurative and poetical—is a bivalve mollusk properly known as the "pima" and native to the Mediterranean. It spins a silk so beautiful that in ancient days the fibre was reserved exclusively for the weaving of royal garments. This silk is spun by the mollusk to furnish an anchor line by which it fastens itself to a convenient rock. It is extremely fine and very strong. Cleaned, dried, and passed through combs, it is reduced to delicate threads of a lustrous brownish yellow hue, which are woven into gloves, stockings, and other articles. A pair of stockings of this material to-day costs $6.

An ordinary marching soldier takes an average step of thirty inches and in traveling one mile each foot strikes the ground 1000 times.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

A. F. of L. Reconstruction Committee.

The St. Paul Convention of the American Federation of Labor adopted a resolution authorizing the executive council to appoint a committee for the purpose of making a study and investigation of the subject of reconstruction after the close of the war. Reconstruction of a practical character to deal with the problem in as comprehensive a manner as possible and to meet at least the immediate needs to emerge from an industrial life of a war basis to a peace footing.

President Gompers announced that in compliance with the above direction the executive council appointed the following representatives of labor as the committee:

John P. Frey, International Iron Molders' Union.

A. O. Wharton, Railroad Employees' Department, A. F. of L.

John Moore, United Mine Workers of America.

G. W. Perkins, Cigarmakers' International Union.

Matthew Woll, International Photo Engravers' Union.

The reconstruction committee met and organized and laid the basis for the investigation and will at as early a date as possible, consistent with the importance of the duties devolved upon it, submit the report to the executive council, and when approved will be published broadcast.

It is confidently anticipated that the work of the committee will contribute much toward shedding light upon the problems and to make suggestions which shall meet the situation and will receive the hearty support of all who are vitally interested in this great subject.

Hazards of Workers Hinder Wage Saving.

"It is very difficult, if not practically impossible, for the wage-earner to save for old age on account of the sickness and unemployment hazards to which he is exposed,"

The above is one of the interesting statements by Rev. Dr. John O'Grady, who has directed a survey in Ohio for the Ohio Health and Old Age Insurance Commission to ascertain how men past 50 years of age fare in different occupations.

Hamilton, with 40,000 population and 15,000 wage-earners, was chosen for one survey, and a smaller survey was made in Cincinnati. More than 1800 persons over 50 years of age were studied—1432 in Hamilton and 416 in Cincinnati. Information was obtained first hand.

The most striking thing found was that a large majority could not or did not save for old age, and of those who did save only a very small percentage were able to save sufficiently to make themselves secure, others acquiring a small home worth $1500 to $3000.

Sickness and accident proved far more serious than old age as a cause of dependency during advanced years, it being found that where bad health did not interfere the aged were able to get along, and strictly old-age dependency did not begin until 70 years of age had been reached.

In commenting upon the condition, Rev. Dr. O'Grady said that there is established "a very close connection between industrial accidents and sickness and superannuation."

The all-around skilled mechanic has a longer working life than the unskilled or master of but one process. The workmen themselves believe that health is the greatest factor in staving off dependency and freely said that this depended upon the care workmen took of themselves.

"There is none," says Dr. O'Grady, "for whom the problem of old age is so serious as for the widow whose husband has died and left her propertyless. The fact that her husband's death is usually preceded by a long period of sickness makes it more than likely that there will be little left for the maintenance of his aged wife."

The survey also shows that while dependent aged people may expect support from children before they are married, "after marriage the parents can so longer rely on them with any sense of security."

No matter how much is done to prevent superannuation there always will be a large problem either because workers are crippled by sickness or accident or because they have become too old to work, it is stated.

Can Men Be Made to Vote?

At the recent election Massachusetts adopted a Constitutional amendment empowering the Legislature to pass a compulsory voting law, and now the Boston Globe asks how can you make men vote if they don't want to.

The newspaper believes, of course, that every voter should exercise his right of franchise, but the question is how can this be accomplished.

"By means of the check list," says the Globe, "the registered voter may be discovered and penalized if he stays away from the poles. But who is to be certain that all are registered? And even if the voter is dragooned to the polls, what is to prevent him, under the Australian system, from turning in a ballot without a single mark upon it'

"Would it do the State any good to increase the proportion of blanks? Indeed, is the ballot of the unwilling voter worth while, anyway? If a man does not have the interest to go to the polls of his own accord, it is arguable that he is so slight a civic asset that the community is better off without his vote.

"Other States have compulsory voting in their constitution; none has it in practice. There is an opportunity for Massachusetts to be the pioneer, but there may be other roads better worth breaking."

Schwabs Likes Unions If Run Right.

At the reconstruction conference of the Chamber of Commerce of the United States of America Charles M. Schwab of the Bethlehem Steel Company said he believed in labor organizations—provided, of course, they are run right.

About the same time Mr. Schwab was orating President Grace of the Bethlehem Steel Company was asking the National

World's Workers

By mutual agreement between the British Engineering Employers Federation and the engineering trade unionists, it has been decided that the question of the recognition of shop stewards in the Amalgamated Society of Engineers should be dealt with on a national basis at an early conference.

The London County Council is offering over 200 trade scholarships to boys between 12½ and 16 years, whose parents reside in London. The scholarships provide free education, with maintenance grants ranging from £6 to £15 a year, at trade schools approved by the council. The scholarships are for one, two, and, in certain cases, three years. It is intended to prepare the scholars, upon leaving school, to be able to take apprenticeships or employment in skilled trades. Instruction will be given in engineering and allied trades, building trades, furniture and woodwork trades, motor-body building, book production, silversmithing, photo-engraving, and photo-process work, also cookery and waiting.

A counseling vice on the industrial situation in the period of reconstruction is heard from Japan in the person of Baron Shibusawa, foremost financier and business man: "The prosperity the war has brought to Japanese business and industrial circles has been due to an extraordinary economic situation, and it may be regarded as doubtful whether it has done good or harm to the country. The rice riots, for instance, may be considered as one of the by-products of the war. The great rise in the cost of living has brought about a revolution in the economic life of the country and has materially widened the gulf between the rich and poor. . . . Here is a social problem of great importance, which it would do well for the capitalist to ponder. What is urgently needed of business men is character building, as most of them are sadly lacking in moral training, and they should be taught the duty they owe to their country. Otherwise they will be overwhelmed by a social cataclysm."

Robert Blatchford once went down into a coal mine in the North of England. In a little book called "Fantasias," printed over twenty years ago, he described how he and his companions were placed in a cage and shot down a chimney half a mile in depth and at a speed that took their breath away. Arriving at the bottom of the shaft, they traversed various subterranean channels until they came to where the "goblins" of this underworld plied their calling. Stripped to the waist, dirt-begrimed, and with tiny lamps glaring and sputtering on their headfronts, they chopped away at the face, and laughed when the visitors sprang back as the coal "talked." The overwhelming tragedy of the miners' industrial existence flashed into Blatchford's mind—and he wondered why they did it. "How ever did you get these men to come down here?" he asked the undermanager. "Do you set traps for them up above and catch them?" "Oh, no," replied the official. "Why, these men can earn two pounds a week!" And that was the explanation—in the case of all miners in all climes. The economic factor was the reason.

INFORMATION WANTED.

Thomas F. Noone, a native of Ireland, born 1887, last heard of in New York, Feb. 15, 1918, is inquired for by his sister, Mrs. Thomas J. Condry, 9 Rosseter St., Great Barrington, Mass. 10-16-18

Members of the crew of the SS. "Kellogg" who were on board when she picked up the SS. "Catania" can obtain money due them for salvage services by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Anyone knowing the whereabouts of Jan Zwart, will please communicate with Consul General of the Netherlands, Mills Bldg., Montgomery and Bush streets. 10-23-18

Pacific Coast Marine.

The Pacific Mail Steamship Company has declared an extra dividend of $1 a share and the regular semi-annual dividend of 50 cents a share, both payable on and after December 16 to all stock of record December 2.

Captain Milton Thwing, a pilot, began suit in the United States District Court at San Francisco during the week against the steamship "San Pedro" for $63, said to be due as pilotage for taking the "San Pedro" to sea last February.

The Patterson MacDonald Shipbuilding Company of Seattle has launched the auxiliary schooner "Babinda," the seventh vessel built by that firm for Australian interests. The "Babinda" is a 4200-ton wood craft, and will be commissioned shortly after January 1.

Portland shipyards have launched 144 vessels, with a total tonnage of 633,250 tons since January 1, 1918, according to figures compiled on December 19. Of this number, 110 are wooden carriers and thirty-four are steel freighters. The aggregate tonnage of the steel vessels is 250,600 and that of the wooden ships 373,650 tons.

Alexander & Baldwin, Seattle agents for the Matson Navigation Company of San Francisco, announced the re-establishment of a line from Seattle to Honolulu by that concern. The plans involve the operation of several new steamships building for the United States Shipping Board.

The fourth section of the new Skinner & Eddy drydock has arrived at the Seattle plant from Port Blakeley. The fifth and last section will be delivered about January 1, and the dock will be in operation shortly after. This will give Seattle three docks with lifting capacity of between 10,000 and 17,000 tons, and two more of between 2500 and 3500 tons.

Skinner & Eddy of Seattle have delivered the 8800-ton steamship "West Cressy," the thirty-first product of the plant completed for the United States Shipping Board. The big ship averaged 12.46 knots on her trials, and underwent the first of the new progressive speed tests inaugurated by the Shipping Board for official trials. She was turned over to the Navy.

Captain Robert R. Waesche, United States Coast Guards, superintendent of naval communication, and Charles E. Martin, civilian supervisor of telephonic communication for the service, are at Eureka to inspect Table Bluff and Trinidad station. Later they will go to Crescent City to make preliminary arrangements for connecting that city with Northwest Seal Rock light station by telephone cable.

Despite the tendency of some of the wooden ships to leak and give their operators an occasional bit of trouble, shipping men seem to have enough confidence in the quickly built craft to submit figures for charter, according to Shipping Board officials. It was announced that several offers had been received, but that no action will be taken until more are listed. The Shipping Board refuses to divulge the names of the bidders, until everybody has had a chance to tender his offer.

Captain L. E. Mason, former master of the steam schooner "F..S. Loop," and twelve members of his crew, were bound over to the Federal Grand Jury by United States Commissioner R. W. McClelland at Seattle, on December 19. The action is in consequence of the discovery by Federal agents of nearly 1000 quarts of whisky concealed in a false ceiling in the boat's bridge and other places about the vessel last November, after the schooner's arrival from San Francisco.

San Francisco Bay navigation was menaced during the past week by portions of the steamer "Sehome," according to the captains of ferry and other craft. The greater part of the deck and superstructure and the cabins floated off Sausalito and Alcatraz, and the navigators had to steer carefully in order to keep from ramming the debris. The hull and some of the machinery are reported to be still in the mud off El Campo. No additional efforts have been made to salvage this portion of the wreck.

The Port of Astoria Commission has sold $250,000 of its bonds. This money is to be used for work on several improvement projects. Among the most important ones which have been authorized are building an extension to the main warehouses on port docks; new administration quarters; a belt line railroad around Smith's Point to the McEachern shipyard and the Astoria paper mill; the construction of a 15,000-ton floating dry dock, and the erection of a third pier at the port property with a modern warehouse for handling import and export traffic. These projects will represent an expenditure of approximately $2,500,000.

The cod fishers of the Grand Banks, those captains courageous whose lives are a romance of peril and pluck, will have to look well to their laurels and their bank rolls, for Japanese fishermen have entered the cod field and are after the business. Two Japanese cod fishers are somewhere on the Pacific today, not very far from San Francisco, en route to Yokohama and the cod banks of Japan. They are the "Tembo Maru" and the "Sobo Maru" and they will be gone until some time next fall. These schooners are the vanguard of the Japanese cod fishers' fleet which has entered into direct competition with the Yankee cod men. A third schooner, the "Ichikawa Maru No. 2," is in San Francisco Bay. The remainder of the fleet, it is expected, will outfit in Japan. The Japanese schooners are operated by the Pacific Trading Company and will bring their catch to Glen Cove, where the company has a cannery. The "Tembo Maru" and "Sobo Maru" were towed to sea by Crowley tugs.

Three vessels of the Hercules Powder Company, which have been operating out of San Diego in the kelp harvesting trade during the war, have been sold to the Standard Oil Company. The vessels were the seagoing tugs "Infallible" and "Creswell" and the floating machine shop "Hercules." The Hercules Company secured $10,000 for the "Infallible," $11,000 for the "Creswell" and $8000 for the "Hercules." The vessels have left for Santa Barbara. Later they will be sent to El Segundo. The Hercules Powder Company probably will dispose of the three kelp harvesters "The Kenvil," "Bacchus" and "Joplin" and a fleet of five ocean-going barges within the next week. Bids for these vessels have been received from ship operators throughout the entire country. It is reported the barges will be purchased by Thomas Crowley, San Francisco launch operator. The barges have an average capacity of 500 tons. The huge $4,000,000 plant of the Hercules Company, located at Chula Vista, two miles south of San Diego, is being abandoned. The plant was a war product.

After suspending ten months, commercial radio communication between San Francisco, Hawaiian Islands and Japan was resumed on December 19. Lieutenant-Commander C. R. Clark, Pacific Coast communication superintendent, says Government stations will handle the traffic. The San Francisco station is at South San Francisco and the Hawaiian station at Pearl Harbor. The Japanese station at Funibashi is controlled by the Japanese Government. Under the Government plan, messages for Japan will be received only from San Francisco and bay cities. Messages may be filed in any part of the United States for the Hawaiian Islands. Western Union offices will receive messages for delivery to naval stations. Due to congestion and the limited service, only full-rate messages will be accepted. All messages will be subject to censorship. Information concerning the certain codes which may be used may be had from the office of Chief Cable Censor, 22 Battery street, San Francisco. Before the war private interests handled commercial radio traffic to Japan. This service was suspended February 21, this year.

Plans to remove a discrimination against San Francisco in favor of Seattle in the payment by the railroads of the cost of transferring export and import shipments from car to ship and ship to car are being worked out by the United States Railroad Administration. Heretofore the railroads have allowed the port of Seattle $1 a ton for loading and unloading costs, while for the same service at San Francisco only 45 cents has been allowed. This was announced unofficially by R. H. Countiss, representative of the Railroad Administration, at a conference held at the Ferry building to discuss the problem of unifying a system for levying and collecting port charges along the Pacific Coast. The conference was attended by representatives of the Chambers of Commerce and port administration bodies of Seattle, Los Angeles, Portland and San Diego, as well as officials of the Federal Railroad Administration and California State Board of Harbor Commissioners. Countiss said that instead of the railroad absorbing $1 a ton in Seattle and only 45 cents a ton in San Francisco, it was proposed to absorb the same amount at every port, or eliminate the charges entirely. He told the delegates that the United States Railroad Administration was in sympathy with and would support efforts of Pacific Coast port authorities to establish a uniform system of charges.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

WEDNESDAY, DECEMBER 25, 1918.

MODERN BUCKO METHODS.

The current issue of the Australasian Seamen's Journal contains an almost unbelievable account of downright brutality by the master of an American vessel at Fremantle, Western Australia.

We quote our contemporary:

Few cases have attracted more attention in Australian marine circles than that of William Wright, a sailor on board the American schooner "Gamble," Captain Lund, which arrived at Fremantle some days ago. The landing staff of the Customs Department carried out the usual routine of inspecting the ship's crew, and in the course of that procedure called upon the ship, through the captain, to lodge a bond of £100 in respect of a member of the crew, name stated above, who, they considered, on account of his advanced age, 65 years, was likely to become a charge on the State. The captain declined to provide this bond as a guarantee that the man would not desert, but took other extraordinary precautions.

Mr. T. McSharer, the local representative of the Australasian Seamen's Union, was informed of certain circumstances by the wharf laborers who were employed on the vessel, and he immediately made inquiries by approaching the naval authorities for permission to board the vessel. For six days Wright had been in irons under the forecastle head of the vessel, and in full view of those working on the vessel. His hands were secured by handcuffs, and on one ankle was fixed a trace chain, which was shackled to a ringbolt in the deck so securely that escape was impossible. The man was suffering from dropsy, and his hands were swollen considerably in the handcuffs. The captain claimed that as Wright is eccentric in his habits he was not prepared to trust him ashore. Wright asserts that he is from Devonshire, England, but his passport shows him to be a naturalized American. Mr. McSharer tried to reason with the American consul (Mr. Burke), who informed him (McSharer) to mind his own business and not to meddle with American laws. Pressure was then brought on the naval and police authorities, and as a result of those representations the man was released and placed under surveillance of an officer, who is to see that he does not leave the ship.

If the American Consul at Fremantle really attempted to justify these old-time bucko methods by any reference to "American laws" he should be promptly removed from the post of responsibility which he has obviously disgraced.

There is no American law which permits placing a seaman in irons or shackling him to a ringbolt, like a wild beast, while the vessel is in port.

Under the new and much-maligned American Seamen's law imprisonment for desertion (quitting one's job) in a foreign port is especially abolished, and it is impossible to believe that either the master of the "Gamble" or the U. S. Consul at Fremantle were not well informed upon this subject.

The aged victim of this modern brutality, if he is still among the living, should seek prompt redress in the courts of the United States. Substantial damages for such wanton cruelty will certainly be awarded by any American jury, if the facts are as stated.

American public sentiment, which is so strongly committed to a great American-manned merchant marine, will never tolerate a return to methods which once unfortunately prevailed on America's notorious bucko ships.

BADGES AND PENSIONS.

Some time ago the announcement was made that uniforms are to be worn hereafter by certain British Merchant seamen. We now learn that the King has formally approved of the award of badges to officers and seamen of the Merchant Marine who have been on the articles of any British merchant or fishing vessel sunk or damaged during the war by torpedo or mine and have afterwards completed a further voyage. The badge will be in the form of a torpedo and worn on the cuff of the left sleeve.

A bar to be worn under the torpedo badge will be added to those who have been torpedoed or mined a second time, and additional bars for subsequent cases.

Sir Albert Stanley, in an official statement in Parliament, said 12,500 men of the Merchant Marine have been killed since the war began, and the amount paid to dependents is about £170,000 a year. The rate of these pensions is now engaging the attention of the Government.

In fact, representatives of the Board of Trade have promised that they would consider whether there could be built up on the war risks scheme a system which would give adequate pensions for the widows and children of all men who have lost their lives in the Merchant Marine.

It should be borne in mind, in this connection, that British Merchant seamen were already insured against industrial accidents and sickness at the outbreak of the war. American Merchant seamen, who are always held to be better fed, housed, etc., than any other nation's seafarers, enjoy none of these benefits. The National Seamen's Compensation bill is quietly sleeping in the Senate and no one has even suggested any pensions for the dependents of Merchant seamen killed in the submarine war unless, of course, the seamen were regularly enlisted in the military or naval forces.

American losses of Merchant seamen have happily been insignificant in comparison with those of Great Britain's, but that surely is no reason why this great and rich Republic should not do as well to her plain Merchant seamen as any other country on earth.

CO-OPERATIVE TRADING.

The article under the caption, "The Way to Social Justice," on the first page of this issue, clearly indicates that it is useless to bewail the increased cost of commodities and yet make no direct effort to cope with it.

What is required, in addition to organized industrial and political effort and functioning in conjunction therewith, is a network of co-operative stores and distributive agencies in all the principal suburbs and country towns.

To accomplish this requires the wholehearted support of Organized Labor. Is the effort worth while? It surely is, for the workers have much to gain and nothing to lose by using the full strength of their tremendous purchasing power in support of co-operative stores of their own.

The average "business man" necessarily seeks nothing but his own profit; hence arise most of the evils of competitive trading, short weight, adulteration in all its forms, exorbitant profits, retail prices out of all proportion to the cost of the goods sold—simply dishonest trading.

A co-operative store owned and controlled by the workers themselves can escape all these evils. Its watchword must of necessity be "Honest trading; no profiteering," because any profit made is paid back to each co-operator in proportion to the amount of his or her purchases. Consider also the indirect benefits of co-operative trading, the social power that resides in the control of the distribution no less than in the production of wealth; the powerful aid that a well-established co-operative store may give to the workers during a strike or lockout; the moral and material benefit to the great mass of the workers in the consciously-directed elimination of all useless middlemen.

Unfortunately, this is a fact not half well enough understood by the workers that, by withdrawing their trade from capitalistic concerns and concentrating it in stores of their own, they may not only strengthen their own position in the industrial battles of to-day but ultimately capture the main sources of wealth of those who exploit them.

OUR DISABLED FIGHTERS.

So fortunate have we been as a Nation that about 34 out of every 35 of our soldier and sailor boys will be able to come home uninjured to take up their old occupations at once. About 1 out of 35, or a total of perhaps 100,000 men, are so disabled as to require hospital treatment. The experience gained from our Allies shows that about 80,000 of these, or 4 out of every 5, will be able when their wounds have healed or their disease has been cured, to follow the old occupation successfully. While the task of finding employment for all these soldiers and sailors who are able to go back to the old job is a large one, it is primarily an administrative rather than an economic problem.

It is expected that the Department of Labor will play a very large part in the placing in employment of the uninjured soldiers and sailors, a task which the department will discharge directly and in which it will ask and use the co-operation of organizations and of individual employers and employes as well.

Of the 100,000 men to be discharged from the service for disabilities, about 80,000, or 4 out of every 5, will be able to go back to their former occupations, and will want to return to them.

By the Vocational Rehabilitation Act the Federal Board for Vocational Education is charged primarily with the direct duty and responsibility of helping these men to get

employment and of following them up so that if they do not get along well or if a recurrence of the old injury or disease takes place, the Federal Board may train them for some other occupation for which they are better fitted and help them to secure employment in it. In the placement of disabled men in employment the Board will, in the discharge of its direct responsibility for each individual case, use the facilities of the Department of Labor wherever they are needed, and a definite working arrangement between the Board and the Department for this purpose has already been made.

About 10,000 of the 100,000 men, or 1 out of every 10, will be unable because of the serious handicap which injury or disease has brought to them to follow any occupation with any degree of success even with training. They will become permanent wards of the Nation, for whom provision will be made.

The remaining group of about 10,000 disabled men, or about 1 out of every 10 injured or diseased, will not be successfully able to follow their old professional, commercial, agricultural or industrial occupation and must be trained for some new occupation.

Uncle Sam has provided for the entire cost of the support and instruction of the disabled man while in training, for the cost of securing suitable employment for him when his instruction is completed, and for follow-up work to safeguard his interests as a worker and citizen.

In the discharge of its responsibility for the proper training and placement of disabled soldiers and sailors the Board has adopted a general plan for carrying on the work. This plan carries out the provisions of the Vocational Rehabilitation Act, usually known as the Smith-Sears Act, which was signed by the President June 27, 1918. Congress committed this great work to the Federal Board and charged it with the duty and responsibility of providing for the placement or the training and placement of the men disabled while fighting for our liberties.

The act has been approved by both representative employers and representative workers. It was indorsed without opposition by the American Federation of Labor in annual convention at St. Paul and by the National Manufacturers' Association at the annual meeting in New York City. Those interested can secure further detailed information upon application to the Federal Board for Vocational Education.

The JOURNAL extends to its readers ashore and afloat the best wishes for a Merry Christmas. This is the first Christmas in four years in which merchant seamen can be reasonably certain that a lurking submarine will not interfere with the festivities of the day. Floating mines are still about a-plenty and it will probably be another year before the seas will be entirely free from that particular menace. But at any rate, there is peace on earth this Christmas and that is surely something to be thankful for! Moreover, for the first time in several years there will be genuine happiness in many a home because of the knowledge that those who have been on the firing line and have survived all the vicissitudes of war will now have the same chance as other mortals "to live to a ripe old age."

FARMERS "O. K." NEW ALLIANCE.

Declaration of Principles and Platform of California's Farmer-Labor Alliance Unanimously Adopted by Farmers' Convention.

The annual convention of the Farmers' Educational and Co-operative Union of America, California Division, just held at Modesto, endorsed without a dissenting vote the Declaration of Principles and the Economic and Political Platform of the new Farmer-Labor Alliance, known as the California Union of Producers and Consumers.

The subject matter came before the Farmers' convention when the following report was presented:

"To the Annual Convention of the Farmers' Educational and Co-operative Union:

"Greeting:—

"At the State convention of this union held in San Jose, one year ago, a temporary committee which had been appointed by the executive committee gave a report of the proceedings in forming an alliance with like committees from the Pacific Co-operative League and the California State Federation of Labor. The action taken by the allied committees, consisting of five members of each of the above-named organizations, had been ratified by the convention of the California State Federation of Labor, held in Sacramento in October, 1917, and only needed the approval of our State union and the State convention of the Pacific Co-operative League to become effective. The organization so formed to be known as the California Union of Producers and Consumers.

"The report of the committee was approved by the San Jose convention and the Constitution and By-Laws changed to provide for the election of an alliance committee to be composed of the State president, the State secretary-treasurer, and three other members. (See Article III, Section 15 of Constitution and By-Laws).

"This committee having been duly elected, begs leave to report as follows:

"Official action having been taken December 16, by the Pacific Co-operative League, endorsing the work already done in forming the alliance referred to above, the first meeting of the California Union of Producers and Consumers was held in the office of the California State Federation of Labor, San Francisco, January 19. At this meeting a permanent organization was formed by electing Fred Millard, president; E. O. F. Ames, vice-president; and Paul Scharrenberg, secretary.

"A committee, consisting of the above named officers, having been previously appointed to draft a Declaration of Principles submitted the following report:

(Here follows a copy of the Declaration of Principles previously published in the Journal).

"The report of the committee was adopted as the Declaration of Principles of the organization.

"The next meeting of the organization was held in San Jose Labor Temple April 27, at which time an understanding was reached as to the points to be included in an economic and political platform, to be used during the ensuing campaign, and a committee was appointed to draft the platform accordingly. At a meeting held May 25 the committee reported as follows:

(Here follows a copy of the Economic and Political Platform, as adopted, and printed in the Journal shortly thereafter).

"During the political campaign a copy of this platform was sent to each candidate for the State Legislature. Some of the planks in the platform, by the action of the people of the State at the recent general election, have been laid away to enjoy a peaceful rest. Other planks are live issues and will call for work by our people before and during the coming session of the State Legislature.

"Your committee is impressed with the importance of this work. We believe that, as a result of this alliance, a much better understanding of the problems of the different organizations represented will bring a unity of action which will promote the welfare of farmer and city dweller alike. As evidence of the attitude of organized farmers throughout the United States we quote from the Declaration of Principles adopted at the meeting of the National Board of Farm Organizations, held in Washington, D. C., August 27-28-29:

"'We declare that the interests of all workers are essentially the same, that the apparent differences which separate those who work on farm from those who work in industry are temporary and superficial, and that it is the clear duty of these two greatest divisions of our people to work together for the common welfare and general good.

"'We extend a fraternal greeting to the great labor organizations of the country and express our appreciation of their determined stand in the winning of the war. We, as they, labor with our hands. We, as they, have found how impossible it is to individually cope with the great organizations of middlemen and employers, and we suggest concerted action and urge the organization of consumers with whom the organizations of producers may meet in conference.

(Continued on Page 10.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Dec. 23, 1918.
A synopsis of the minutes of the above date will be published in next issue.

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., Dec. 16, 1918.
No meeting. Shipping slow; men scarce.

J. ETCHELLS, Agent.
Room 11, de Cosmos Block, 1424 Government St.

Vancouver, B. C., Dec. 16, 1918.
Shipping fair.

W. G. MILLARD, Agent.
58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, Dec. 16, 1918.
No meeting. Shipping and prospects fair.

H. L. PETTERSON, Agent.
2016 North 30th St. Tel. Main 808.

Seattle Agency, Dec. 16, 1918.
Shipping medium.

P. B. GILL, Agent.
84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, Dec. 16, 1918.
Shipping slack; new members around.

ED. ROSENBERG, Agent.
P. O. Box 280. Tel. Main 557.

Portland Agency, Dec. 16, 1918.
Shipping good; prospects good.

JACK ROSEN, Agent.
88½ Third Street. Tel. Main 6013.

San Pedro Agency, Dec. 16, 1918.
Shipping good; members scarce.

HARRY OHLSON, Agent.
128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, Dec. 9, 1918.
Shipping poor; prospects poor.

JACK EDWARDSON, Agent.
P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Dec. 19, 1918.
Regular meeting of the Marine Cooks and Stewards was called to order at 7 p. m., Ed. Anderson in the chair. Secretary reported shipping medium; plenty of members ashore. Balloting on officers for the ensuing term and delegates to the convention of the I. S. U. of A. was proceeded with.

EUGENE STEIDLE, Secretary.
42 Market Street. Phone Kearny 5955.

Seattle Agency, Dec. 12, 1918.
Shipping medium.

LEONARD NORKGAUER, Agent.
Grand Trunk Dock, Rooms 203, P. O. Box 214. Phone Main 2233.

San Pedro Agency, Dec. 12, 1918.
Shipping fair; few members ashore.

HARRY POTHOFF, Agent.
Sepulveda Bldg., 128½ 6th St. Phone Home 115; Sunset 66 W.

Advices from Honolulu indicate that the island port is caring for a number of crippled or leaking wooden ships. It is reported that extreme care is taken to calk the decks of all craft before loading with sugar and other perishable goods. The schooner "Fanny Dustar," en route from Fiji for San Francisco, put into Honolulu recently with a portion of the rigging gone and badly in need of repairs. The cargo of 331 tons of copra is consigned to the American Trading Company. The "Airlie" sailed from Honolulu for San Francisco with 2500 tons of pineapples but ran into a gale and was reported to be limping back into port. The "Blythedale" arrived from San Francisco with a cargo of coal and suffered a mishap to the rudder stock.

Laden with 5545 barrels of flour valued at $54,750, the five-masted auxiliary schooner "Belfort," built by the Foundation Company for the French Government, cleared from Portland, Oregon, on December 18, for France. The vessel also carried copper ore from Puget Sound valued at $100,544.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Statements published in New York papers of December 10, to the effect that a conference of some forty prominent labor officials at the Hotel Continental in New York City had agreed to "withhold support" from the movement to establish an independent Labor party, as launched by the Chicago Federation of Labor and endorsed by unanimous vote of the convention of the Illinois State Federation of Labor, are denied by men who were there. No such action, or any action, was taken.

President Gompers, Secretary Morrison and Messrs. Frey and Perkins of the Reconstruction Committee appointed by the Executive Council of the American Federaation of Labor went to New York to meet the Reconstruction Committee and Social Insurance Committee of the Central Federated Union, together with a number of State and local labor officials. Mr. Gompers made a speech dealing with social insurance, reconstruction and political organizaton. He expressed his well-known opposition to the formation of any political party by and for organized labor. Frey and Perkins endorsed his statement. The members of the Reconstruction Committee of the New York City Central Federated Union, who had previously recommended that an independent labor party be formed in that city, took no part in the discussion. A call has been issued by the Central Federated Union for a political convention, to be composed of two delegates from each local union in Greater New York and vicinity, to meet January 11 and 12 to consider the matter and to draw up a scheme of organization and a platform if that course is decided upon.

Bridgeport has organized its own independent labor party, and will co-operate with the other central and State labor bodies throughout the country in promoting the movement on a national basis. There are signs that the same action will be taken in many of the towns where the awards of the War Labor Board have created a local industrial revolution.

Encouragement to the movement has been given by resolutions adopted by the national convention of the National Nonpartisan League, meeting at St. Paul on December 4. The resolutions read:

"Whereas, The 325,000 organized working men and women of the City of Chicago have voted unanimously to enter politics and wage an aggressive campaign to wrest the control of the city and State from the hands of Big Business and to promote the adoption of a program of fundamental economic reforms, and

"Whereas, The Chicago Federation of Labor has proposed to the Illinois State Federation of Labor a similar program of economic reform, and has further proposed that the farmers of Illinois be invited to join with them in support of such program, and

"Whereas, The Chicago Federation of Labor has adopted a platform called 'Labor's Fourteen Points,' which in many particulars squares with the program of the organized farmers belonging to the Farmers' National Nonpartisan League, and more specifically in its demands for public ownership and operation of railways, steamships, stockyards, grain elevators, terminal markets, telegraphs, telephones and all other public utilities, together with the nationalization and development of basic natural resources, and in its demand for the elimination of wasteful methods and parasitic middlemen and all profiteers in the creation and distribution of the products of industry and agriculture, in order that the actual producers may enjoy the fruits of their toil, and being in agreement with its demand for the liquidaton of the national debt and its demand for the complete restoration at the earliest possible moment of all fundamental political rights—free speech, free press, and free assemblage; therefore be it

"Resolved By the National Committee of the National Non-partisan League in convention assembled, that we send our hearty greetings to the organized wage earners of Chicago and of Illinois, and pledge them our sympathy and co-operation in their efforts to consolidate and increase the gains for true democracy and for justice to workers and producers.

"Unanimously approved by convention. By J. D. Ream, Nebraska, Master of State Grange; Dell Patterson, North Dakota; Jene Hanson, Montana; M. L. Amos, Kansas; E. D. Paquin, Minnesota; A. D. Engle, South Dakota; O. M. Tronas, Idaho, National Committee."

It seems a pity to turn from such evidences of farmer-labor harmony to meet the issue of the right of women to hold jobs after the war, when men want those jobs. But this problem of the war-working woman is here, and there is danger that employers may use the quarrel between women and men to undermine the wage standard secured during the war. The National Women's Trade Union League has taken up the case of the women in Cleveland whom the War Labor Board decided should give up their jobs as street car conductors, and has issued a protest that is almost bitter in tone.

The League calls upon the War Labor Board to reopen the Cleveland case "in order to secure a settlement just to all, in common fairness to the women workers of America, who by assuming responsibilities urged upon them have made possible the fighting front in France, and have done their utmost to help bring the war to a victorious conclusion."

It calls the action of the War Labor Board, in simply wiping these organized women off the industrial map, "an amazing infringement of fundamental rights," and "a most dangerous precedent to set at the very beginning of a readjustment which requires the most intelligent co-operation alike of the employers, the workers, and the country."

Under the circumstances, it is probably fortunate that the Reconstruction Committee selected by the president of the American Federation of Labor to untangle all of these knotty problems has organized and begun its work. The committee is made up John P. Frey of the Molders, A. O. Wharton of the Machinists, John Moore of the United Mine Workers, George Perkins of the Cigarmakers and Matthew Woll of the Photo Engravers. The Women's Trade Union League may not be able to impress the War Labor Board, which is near the end of its usefulness anyhow, but they will be able to bring their cause into court before the Reconstruction Committee. From that body they can appeal to the Executive Council, and then to the convention of the American Federation of Labor.

If some of the labor organizations are alarmed at the women's invasion of the general industrial field, an even greater anxiety is felt regarding the return of the soldiers this winter. Latest information is that Pershing's men will be discharged and sent home almost as fast as they arrive on this side the ocean, instead of being held in camps for a while. The War Department is now understood to be planning to release only about three-fourths of the men who have been held in camp in the United States, and to organize the remaining fourth into a "permanent training corps," to be kept in uniform until the last of the army from France has been demobilized. To this extent, it seems, the Department now is going to withhold men from the general rush for jobs for the reconstruction period.

Whether a million men will be given employment on public utility construction, and especially in improving the railroad lines, depends on the attitude the country and Congress shall take as to public ownership of the railway system. John Scott, Secretary of the Railway Department of the American Federation of Labor, says that his department is about to issue a series of questions, for a referendum of the membership of the unions in that department, on the questions of public ownership and democratic management of the railroads. A considerable number of local unions have demanded public ownership and operation; some of the officers are opposed to it, believing that the present arrangement is good enough; others want the Government to give back even the control of the property.

Nine times out of ten, the fear of public ownership is based on the fact that President Wilson has kept in office so objectionable an industrial tyrant as Postmaster General Burleson. Director General McAdoo, in spite of his no-politics order, which was simply ignored by the men in railroad service, is popular. It is not easy for the older labor officials to imagine a time when men like Burleson will be excluded from governmental power by the labor political organization. If labor really had a voice in the management, they agree, then public ownership would be the ideal plan.

By the present method of reckoning time, every year of which the number is divisible by four without a remainder is leap year, excepting the centennial, or even hundredth years, which are only leap years when divisible by four after suppressing the two ciphers. The year 1600 was a leap year, the year 1700, 1800, and 1900 were not leap years, but the year 2000 will be and every intervening year that is exactly divisible by four. From 1796 to 1804 and from 1896 to 1904 were four-year intervals without a leap year.

Since the outbreak of the world war 8400 special war laws have gone into effect in Germany, and besides this the Federal Council has issued 33,000 special regulations, according to a statement made by Dr. Cruger, a Progressive Party member of the Prussian Landtag, and quoted in the Berliner Tageblatt of July 31.

SPITZBERGEN'S FUTURE.

It has become quite clear that the products of Spitzbergen will be one of the greatest factors in the economic development of Europe after the war. Germany was fully alive to their value when she endeavored to annex them in the treaty of Brest-Litovsk, since Russia was supposed to have some sort of shadowy interest in the country, more from propinquity than any other reason. Great Britain now has the greatest commercial interests there, and by next year they should be supreme. There are also Norwegian and Swedish interests, but they are not extensive; otherwise no parts of the country are being exploited. The Americans sold their interest to the Norwegians some little time ago, and there are apparently no other nationalities concerned.

It is a little surprising that the commercial value of the country has never before been adequately recognized, especially by Great Britain, whose iron has so largely to be imported and whose coal supply, though still plentiful and accessible, costs, and will cost, an increasing amount, owing to war wages, which are not likely to decrease. It is a lengthy process, taking four or five years to open up new mines, but in Spitzbergen the coal is largely surface, of excellent quality, of all varieties and can probably be loaded by an easy system of modified telferage, indeed a simple wire ropeway, at a cost of 2s. 6d. to 3s. a ton. Aberdeen is only 1230 miles away, a three to four days' journey, and a good deal less by a fast boat. A destroyer covers the distance in a very short time. As markets for its coal the Spitzbergen has all Scandinavia and Northwestern Russia, quite apart from Great Britain, to which much of it will come, since it can easily compete with the home products.

The iron ore is apparently inexhaustible and of first-class quality and should be far more accessible than either the products of Spain, so far as the British East Coast is concerned, or Brazil, so far as the entire British Isles are concerned. It is therefore quite comprehensible that all the departments of state in England are greatly interested in the commercial development of Spitzbergen, and that the Foreign Office has bestowed on the project a maximum of good will. Quite apart from coal and iron, however, the country possesses all sorts of minerals, even gold, though lengthy investigations will be necessary to establish the extent of its capabilities.

No difficulties stand in the way of development. The climate is attractive and exhilarating. It is never severe, and the worst that can be said of it is that there are occasionally winds much like those in Canada. Men like to live there, have lived there, in fact, for five years without a change, and there is never any difficulty in obtaining thousands of Scandinavians, if only they can be afforded the means of livelihood. To a large extent the country is self-supporting. Animal and bird life abounds, and there is plenty of grass for the reindeer. In summer the days are always light, and in winter they are never actually dark, there being a sort of gray dusk with brilliant moons; work goes on just the same in winter as in summer.

It is a country essentially on the eve of development. When Sir Ernest Shackleton returns next spring, he will probably be able to show that most of it has been taken up by the Northern Exploration Company, to which the British Government is showing special good will, and after the war many things may happen.

HARMONY IN CANADA.

A most unusual memorial has been presented to the Canadian Government. It was signed by representatives of the Canadian Manufacturers' Association, the organized labor forces of Canada and a joint committee of technical organizations. The memorial is full of vast possibilities. For the first time in the history of Canada, it is said, these hitherto divergent interests, at any rate as far as capital and labor is concerned, are in absolute agreement in the matter of a most far-reaching policy and much is hoped for from the better understanding of the two great factors of Canadian public life.

The memorial was presented to the Government by Mr. G. M. Murray, general secretary of the Canadian Manufacturers' Association, and Mr. S. Willis Maclachlan, representing the technical organizations. It is the result of a conference held between Canadian labor and Canadian capital, and is believed to be the commencement of what is described as an "optimistic campaign."

The principal points touched on in the memorial were as follows:

That the Government be requested to establish immediately a bureau of public welfare to deal with such matters as sanitation, town planning, housing plans, and every other matter pertaining to the physical efficiency of the nation. Owing to the present dearth of suitable homes for workingmen, this particular subject should receive the bureau's first consideration. Much could be accomplished through the coordination of the many agencies, private, philanthropic and governmental, dealing with these matters. Having regard to the important part which research must necessarily play in Canada's industrial reconstruction, the appropriation for that purpose should be increased to not less than $1,000,000 annually. The board handling that work should not be merely advisory as at present, but should be clothed with specific executive powers, which powers should preferably be exercised by a board of managers, upon which labor, manufacturers and engineers would all have representation.

That the establishment of a central empire authority of emigration be approved of for supplying information to parties intending to emigrate, as to conditions in the countries to which they desire to so emigrate and that the established Emigration Department in Canada give serious consideration to the question of further restricting undesirable emigration.

That the advancement of technical education is of such vital concern to the whole country that the burden should not be left entirely to the municipalities and provinces. The Dominion Government should co-operate by such means as are best calculated to assist the authorities and expand the facilities for this work. It is urged whatever plan be adopted, that there be kept constantly in mind the necessity of working it out on lines that will bring technical education within easy reach of all classes.

That a practical land settlement plan be worked out at once and in connection with the same the Publicity Department should start a campaign to interest our soldiers in the advantages of farming.

That the Publicity Department of the Government start at once an optimism campaign and that the press of the country be requested to co-operate.

Other matters urged upon the attention of the Government were those connected with public works, a survey of imports, a general policy relating to all raw materials and other questions of a similar nature.

"I want to get this check cashed." said a young wife to a clerk at the bank. "Yes," madam; you must indorse it, though." "Why, my husband sent it to me. He is away on business." "Yes, madam; but just indorse it. Sign it on the back, please, and your husband will know that we paid it to you." The youg lady went back to the desk and in a few minutes came back with the check indorsed, "Your loving wife, Sophia."

It is rather unfortunate that the laws against infanticide were established before the crime of child labor had become an issue.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER

(Continued from Page 3.)

War Labor Board to withdraw its representatives from that plant and abandon a shop system of collective bargaining which the company, the employees and the War Labor Board agreed to.

Mr. Schwab favors the two-by-four shop union rather than unions linked up in huge national or international organizations.

"I believe," he said, "that labor should organize in individual plants or among themselves for the protection of their own rights, but the organization and control of labor in individual plants and manufactories, to our mind, ought to be representative of the people in those plants who know the conditions."

This should be sufficient notice to those ogres, known as business agents and walking delegates—who are always trying to foment discontent and start riots—that, as far as Mr. Schwab is concerned, they "Needn't come 'round."

The speaker declared that "any foundation of organized labor" that is on a false basis must fail. Capital is included in this warning. The statement shows that Mr. Schwab is not partisan, but is broad-minded, for the public is not supposed to make any distinction between capital and capitalists. In fact, the public is expected to put a steam dredge, a flour mill, a coke oven or a railroad system in the same class with human beings who depend upon the sale of their labor power for their daily bread.

Mr. Schwab also made this statement, which has so often been uttered by agitators and other undesirables:

"I seriously doubt that many times in the years gone by labor has received its fair share of the prosperity of this great country."

Mr. John D. Rockefeller, Jr., spoke along the same lines. His contribution of generalities was well received.

Dollar Worth Less; Wages Are Not High.

Wages are not high, when the purchasing power of the dollar is considered, said G. H. Sines, United States railroad administration, at a reconstruction conference held in Philadelphia under the auspices of the Academy of Political Science.

The present wages of railroad workers, he said, while 50 per cent. higher than heretofore, will not buy as much as former wages because prices have increased 65 per cent.

The forces of true democracy will resent any tendency to lower the standard of living, declared William F. Coburn, connected with the cost of living department of the national war labor board.

"Democracy, in the last analysis, means the right to choose one's standard of living," he said, "and a high or low standard of living means on the one hand death, destitution and a broken spirit, and on the other health, comfort, courage and a spirit of independence."

In Pay of Austria.

Arthur Gabryel, former vice-president of the American Association of Foreign Language Newspapers, swore before a Senate investigating committee that it was an open secret among Poles in New York that Louis N. Hammerling, president of the association, was in the employ of the Austrian Government in 1916. He said he had seen Count von Bernstorff, former German Ambassador, in Hammerling's office, and shortly after, the witness stated, a campaign to insert in more than 400 newspapers of the country an appeal against shipments of arms to the allies was begun. Gabryel said he knew Bernstorff from having sat across the table from him on board a ship returning from Europe a short time before.

Trade unionists have an additional interest in this testimony because of Hammerling's activity against the Burnett immigration restriction law, which was passed by Congress in 1915. At that time Hammerling was president of the Association of Foreign Language Newspapers. He was also associated with the National Liberal Immigration League, which was exposed by President Gompers. The A. F. of L. executive made public documents which showed that the league's campaign against immigration restriction was financed by large employers of labor, including steamship companies and steel and iron interests.

Hammerling was in the public eye at that time, and posed as an American who shuddered at the thought of refusing to extend democracy to the immigrants of the world, even though some of them would reduce living standards of American workers.

Now Hammerling is charged, by one of his business associates, with being in the pay of Austria, in an effort to perpetuate autocracy.

Riots Easily Started Say Enemy Adherents.

At a Senate committee hearing on German propaganda methods the Government's secret service department submitted letters written by German agents in which were outlined plans to start Japanese race riots in California for the purpose of embroiling Japan and America.

The letters state that a well-known eastern detective agency has unearthed scandals concerning the police of San Francisco and other western cities. It is shown that these police departments could be forced to aid the riotinf under threat of exposure.

The clergy were to be brought into the mix-up by judiciously arranged insults of American women by Japanese men, through the ministers' love of seeing their names in print, a common failing of the clergy of the United States, the writer declared. This anti-Jap propaganda was to be carried on through films and plays designed to incense their audiences against everything Japanese.

A large amount of similar testimony was submitted, which should open the eyes of workingmen who are oblivious to methods employed to arouse a wicked mass sentiment.

In Japan ladies sit with their hands folded palms upward. They all shave. They never brush their hair, but only comb it. For the English "a thimbleful" the Japanese speak of "a sparrow's tear," and instead of talking of putting a thing on the fire to cook, the Japanese speak of putting the fire through it. A man never wishes his wife good-morning first—a truly Oriental touch. She greets him and he replies. A woman never speaks of her husband as such. She speaks of, "the house."

FARMERS "O. K." NEW ALLIANCE.

(Continued from Page 2.)

believing that such conference will tend to allay and remove any feeling of antagonism that may now exist between the city and country, and that by the joint conference of these organizations the monopoly of the middlemen may be curbed and finally overthrown.'

"Respectfully submitted,

"J. J. MARDIE,
"J. M. COCHRANE,
"A. KAMMURER,
"ALLEN TALBOT,
"FRED MILLARD."

The foregoing report was unanimously adopted.

Later during the convention a committee reporting on "Co-operative Organization" submitted the following:

"Recognizing the great value and the immense power for good in the Triple Alliance, we urge this convention to take steps to develop the possibilities of a more complete acquaintance with the State Federation of Labor and the Pacific Co-operative League, the two bodies joining with the Farmers' Union in the Triple Alliance. We also urge that every member personally become acquainted with the aims and objects of the alliance and the benefits we can derive therefrom."

This report was also adopted by unanimous vote.

Among the many speakers who addressed the convention by invitation were President Murphy and Secretary Scharrenberg of the California State Federation of Labor. Both were well received and spoke hopefully upon the future of the new alliance.

Further information from Secretary Millard shows that the California Division of the Farmers' Educational and Co-operative Union of America is stronger to-day than it has been for several years. The Modesto convention also took the initiative in organizing a federation of the several farm organizations in the State. This is in line with the work of the National Board of Farm Organizations which held a convention in Washington, D. C., August 27-29. State President Hardie of the California Farmers' Union was a delegate to that convention and was appointed a member of a committee of 48 (one from each State) to work for a closer affiliation of all farm organizations in order that the united strength of the organized farmers might be brought to bear in solving the problems confronting the tillers of the soil.

This proposed federation of farm organizations does not mean that the California Farmers' Union will lose its identity. To the contrary it is hoped that all organizations concerned will benefit and that the Farmer-Labor Alliance will become stronger and more influential when its aims and purpose are fully understood by all groups of farmers.

Motorships of a large type will soon be seen in San Francisco, according to advices received during the week. The "Borgland," the largest motorship ever built in Norway, recently arrived at New York. This vessel is equipped with full Diesels and is 4500 tons gross and will carry about 8000 tons deadweight. It is owned by the Norway Pacific line and will ply to the Pacific Coast in the near future, it is announced. The Matson Navigation Company is now contemplating the building of a class of cargo carrier for the service between San Francisco and Honolulu that will be a combination motorship and steamer. It is planned to install a 3000 horsepower turbine amidships and operate the propeller with the aid of the reduction gear and Diesel engines on the port and starboard sides. These will be 1500 horsepower each. The Diesels would be used only at sea when the full speed of about thirteen knots was desired, and the boilers would be sufficient to supply the necessary steam for twelve winches. There will be six big hatches in addition to a number of side ports and the facilities for handling cargo will be double that used on the regular steamers of the line. The vessel will be designed to be a big carrier, loading more than 14,000 tons deadweight at thirty feet. The Matson Company believes that the motorship will replace all steam vessels in another decade, and are therefore preparing to change to the new type before the competition becomes too keen.

Details of the foundering of the steamer "Benito Juarez" were told upon arrival of the steamer "China" from Honolulu during the past week. Captain E. O. Denzong and eleven survivors arrived at the island port from Lanai the day before the "China" left for San Francisco. The "Benito" ran into the storm on the morning of December 2. Just before noon the vessel ran into a heavy sea which broke the port starboard oil tank and gave the ship a bad list to port. Chief Engineer F. J. Matthewson worked in water nearly to his neck in order to keep the pumps going, but the water gained and it became necessary to abandon the ship. Seven Chinese got into boat No. 2 and drifted away and were never seen again. Second Assistant Engineer Charles Byrne was seen to drift away on a hatch. The other boats drifted about all night and the next day the port of Lanai was reached safely.

A TRIBUTE TO LABOR.

In the annual report of the Secretary of the Navy for the present year, the following tribute to the patriotic part that labor has played in the winning of the war finds prominent place:

"The relations between labor and the Navy Department have been highly satisfactory during the past year.

"In spite of the general bidding for skilled mechanics, the workmen in our navy yards, with surprisingly few exceptions, have remained loyal to the department and have refused to leave their vitally necessary work in the yards for more lucrative positions elsewhere. In addition, on several occasions when the general relations between capital and labor appeared, under the extraordinary conditions created by the war, to have reached a critical stage, the various trades in our navy yards addressed resolutions to the Secretary of the Navy so clearly defining their belief that the duty of all loyal American workmen lay in securing the maximum production of war materials by combined individual efforts, without regard to selfish considerations of personal betterment, as to have no slight effect in bringing both sides in controversies going on outside the yards to a realization of the need of forgetting their disputes and devoting their energies toward winning the war.

"Much of this satisfactory condition is due to the loyal co-operation of the heads of the American Federation of Labor, with whom the department has maintained the friendliest relations, and whose wise and patriotic councils have done much to keep such yard workmen as were members of labor organizations keenly alive to a sense of their duty as American citizens."

THE REINDEER.

In speaking of the Eskimo dog, Jean Henri Fabre, in "Our Humble Helpers," thus refers to the reindeer: There is but one species of this sort that can live in these desolate regions, and that is the reindeer, which is about as large as the stag, but more robust and thickset. Its horns, or antlers, are divided each into two branches, the shorter one pointing forward, the other, the longer, pointing backward, and both ending in enlargements that spread out somewhat like the palm and fingers of an open hand. . . . It is content with a kind of food that none of our animals would touch. It is a lichen, white in color and divided into a multitude of branches, close together and presenting the appearance of a little bush a few inches high. It grows on the ground, which it entirely covers for immense stretches. During the winter the reindeer scratch the snow with their fore hoofs and uncover the coarse plant, softened by moisture; and this plant they browse. Thus it is that interminable fields of snow . . . supply sufficient pasturage for these animals. This lichen, last vegetable resource of the extreme North, is called reindeer moss, and is found everywhere, in the most arid lands, between the poles and the equator. Among the underbrush of our most barren hills, you will find it in abundance, fresh and supple in winter, dried up and crackling under the feet in summer. . . .

In Lapland, the reindeer is a domestic animal. There it fills the place of our cattle and serves at one and the same time as cow, sheep and horse. The Laplander lives on reindeer milk and its products. . . . When the ground is covered with snow, he harnesses the reindeer to the sled and travels as many as thirty leagues a day, his swift equipage with its broad runners gliding over the snow and hardly leaving a trace behind. The reindeer is not rare in Greenland, but there it lives in the wild state, for the Eskimo, much less civilized than the Laplander, has not yet learned how to win it to his uses and accustom it to domestic life. It runs at large.

CAMOUFLAGE OR REACTION?

In its issue of November 15, L'Humanité (Paris) comments as follows on the news from Germany:

"Two emperors, three kings, four or five grand dukes, and three princes have fled. Revolutionists by hundreds of thousands fill the streets of Berlin and other cities. The red flag is floating over the imperial and royal palaces. Councils of workingmen and soldiers, as in Russia, and committees of public safety, are acting everywhere in favor of a republic. Mackensen's soldiers refuse to obey orders and acclaim the revolution; those at Berlin throw their rifles and machine guns into the river. The people's commissaries at Berlin demand a high court to try those who are responsible for the war; the Minority Socialist, Haase, is Minister of Foreign Affairs for Germany; everywhere working-class and Socialist governments are being installed.

"According to our capitalist press all this is 'camouflage'; it is 'comedy'; the Germans 'are covering their militarism with a Bolshevist veil.' Immeasurable stupidities regarding this revolutionary drama are displayed more and more by the press of our bankers, war manufacturers, and nouveaux riches. Some show a fear of contagion. To-day the Matin wrote tranquilly: 'Let us avoid the formation of a Bolshevist bloc in the center of Europe. To prevent it, let us erect a barrier between Russia and Germany. Let us send an army to Dantzig.'

"Assuredly Lloyd George was right when he said yesterday, in his speech to the English Liberty party: 'I do not fear revolution. I do not fear Bolshevism. It is reaction that I fear.'"

At first blush one would suppose that oak, cedar, chestnut, birch, or any of the moderately firm hardwoods would do as well as walnut for the stock of guns, but experience has proved that they will not. There is no wood of equal weight that will stand as heavy impact without breaking, and gun butts are not infrequently useful in fighting. Besides, the grain of black walnut lends itself perfectly to turning lathe work, and the wood takes and holds a high polish. But most important of all, it does not splinter easily. A bullet or scrap of shrapnel may hit a walnut gun stock and tear out a piece of it or pass through without making a single splinter, where such damage to a piece of oak or almost any other wood would send a shower of splinters into the man holding the gun, endangering his eyes and face.

Labor News

Company-owned towns are a failure, declared Dr. Frank E. Vincent, president of the Rockefeller Foundation, in a speech before the National Housing Association Conference. He said these towns are unpopular, regardless of their attractiveness, because the average American resents being told what he must do. This statement is in line with organized labor's opposition to the whole system of welfare work and company "unions" that are so strongly urged by the Rockefeller interests, from which the Rockefeller Foundation receives its financial support.

Reorganization of the Department of Labor from a war to a peace basis has been undertaken by Secretary of Labor Wilson by his appointment of an advisory committee to work out the details of the readjustment. Louis F. Post, assistant Secretary of Labor, is chairman of this committee. The other members are: A. W. Parker, chief law officer, bureau of immigration; Roger W. Babson, director of the information and education service; Miss Mary Van Kleeck, director of the woman in industry service, and Grant Hamilton, director of the working conditions service.

The Washington State Industrial Insurance Commission reports that more men are employed in that State than at any other time in its history. The figures show that there are 244,133 men employed in industries under the Workmen's Compensation Act. Of this number 37,000 are employed in ship yards. There are 1300 active industrial firms doing business and paying into the different funds. The figures show that 131,000, or more than one-half the men employed, are under the medical contract system, while the remainder have elected to pay into the medical aid fund.

The National War Labor Board has ruled that the $250,000 back pay in dispute between the International Railway Company, Buffalo, N. Y., and its organized motormen and conductors shall be paid not later than April 1 next. If the company is permitted to increase fares it shall be allowed 60 days in which to make the payments after the increase goes into effect. These employees suspended work to enforce wage increases which date back to June 1. When the strike ended both sides agreed that the National War Labor Board decide when the back pay would be paid.

An amendment providing for a 10 per cent. tax on the products of child labor has been inserted in the war revenue bill by the Senate Finance Committee. The intent of this tax is to accomplish the same purpose as the Federal child labor law, which was declared unconstitutional last summer by the United States Supreme Court. This law prohibited the interstate shipment of products in which child labor was engaged and the court held that Congress has no authority to prohibit interstate commerce shipments except where the article is evil in itself, such as lottery tickets. As the proposed tax will regulate, instead of prohibit, child labor opponents are hopeful that this will be upheld by the court and the same purpose intended by the child labor law accomplished.

Discusses the "bread and butter question" from the standpoint of the worker
• • •
League President, Judge James M. Rea, Savannah, Mo.; Vice-Pres., Kenneth B. Elliman, Boston, Mass.; Treasurer, Herman Cohn, Seattle, Wash.; Secretary, W. E. Brokaw, Longbranch, Wash.

INFORMATION WANTED.

Members of the crew of the steamer "Brazos" who were on board when she picked up the S. S. "Iroquois" can obtain money due them for such salvage services by communicating with Silas B. Axtell, attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 7-31-18

A club within a club!

Existing clubs represent organizations already formed.

Why not propose, at the next meeting, that your club become a War Savings Society for the rest of the war?

Each member agreeing to buy at least one War Savings Stamp per month.

Besides the saving—

It becomes the popular thing to do with less; to make what you have last longer.

Incidentally, it gives the Government a better market wherein to purchase things for soldiers.

INFORMATION.

Members who were present at the time when W. Bodie met with an accident on board the S. S. "Eastern Sea," last July, are requested to communicate with the above named comrade, P. O. Box 65, Seattle, Wash. 11-6-18

Members of the crew of the S. S. "Fred W. Whellen" who were on board November 11, 1918, when she picked up the bark "Galica" should file their claims with this office and be joined in libel which is being filed by the undersigned on behalf of the members of the crew. Silas B. Axtell, 1 Broadway, New York City. 12-25-18

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

INFORMATION WANTED.

Anyone knowing the whercabouts of Daniel Shean, last heard from at Cleveland, will kindly communicate with his brother, Richard Shean, 7014 Cedar Ave., Cleveland, Ohio. 11-6-18

Members of the crew of the steam schooner "Florence Olsen" who signed articles at New York on September 15, 1918, for a voyage to Central America and return, and who were on board said schooner at the time she salved the steam schooner "Claremont" near the Tucker Islands, off the coast of Nicaragua, on October 31, 1918, and towed her into Christobal, will kindly communicate with Silas B. Axtell, 1 Broadway, New York City. 12-25-18

The offices of Attorney I. A. Rabinow, 277 Broadway, New York City, are open to seamen in such as Compensation, Salvage or Maritime accident cases. Legal service rendered, free of charge, in nature of consultation and advice. (Advt.)

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

Hans Meyer, member of the Sailors' Union of the Pacific, who was last seen in Honolulu, T. H., on Feb. 17, 1914, is inquired for. Any one knowing his whereabouts, please notify Henry Capell, 51 South St., New York, N. Y.—5-29-18.

Home News

In 1880 negroes in Georgia held property valued at $5,764,293; in 1917 the figures had increased to $40,287,-921—nearly sevenfold in thirty-seven years.

The minimum charge for night telegrams after January 1 will be 20 cents for ten words, and 1 cent for each additional word; 50 cents and 2 cents for each additional word will be the charge for the longest distance.

Gov. Arthur Capper of Kansas, Senator-elect, in a statement to the Farmers' National Committee on War Finance, pleads for a higher tax on war profits. He says that during the last eight years the wealth of the country has increased from $187,000,-000,000 to $250,000,000,000, and that most of this gain has gone to less than 1 per cent. of the population. He declares that "this war was not fought to make billionaires out of millionaires, nor to lay a heavy burden for years upon the workers of America."

Fifteen States, according to the Woman Citizen—Arizona, California, Colorado, Idaho, Kansas, Michigan, Montana, Nevada, New York, Oklahoma, Oregon, South Dakota, Utah, Washington, Wyoming, with 7,303,-288 women over 21, have full suffrage and will cast 137 electoral votes. Four States — Illinois, Nebraska, North Dakota and Rhode Island—have 2,358,996 women who have partial suffrage, and will cast 47 electoral votes. Arkansas and Texas which permit 1,354,680 women to vote at the primaries, have 29 electoral votes.

An American delegation of propagandists from the Committee on Public Information, headed by Edgar G. Sisson, director of the foreign press section, has sailed for Europe to tell of American ideals. Charles S. Hart, director of the division of films, accompanies the party to supervise the taking of motion pictures of the reconstruction work in the war area. Other members are Carl Byoir, Carl Walberg, E. L. Bernays, Edward H. Shuster, Gustav W. Axelson, W. Heinecke and the Misses Josephine Giglio, Edith C. Strauss and Alice L. Seixas.

Resolutions passed by the New York State Federation of Woman's Clubs at its recent convention were: Favoring a bill to abolish the electrocution of minors; publication of records of all candidates for office before election; equal pay for women and men teachers; establishment of compulsory continuation schools for children who take out their working papers and go into industries as early in life as they can; compulsory establishment of kindergartens on demand of twenty-five parents in a community; and bills to wipe out illiteracy in the State.

Protesting against a resolution offered in the Senate by Senator Knox, of Pennsylvania, to the effect that the formation of the league of nations be deferred until after the peace conference, the League of Free Nations Association has sent a strongly worded message to the Senate Committee on Foreign Relations. It states that "the best thinkers in Europe and America believe that the complex question of nationality, faction and opportunity arising all over Europe cannot be settled in any other way than through the impartial study and decision of the league of nations."

Domestic and Naval

Fire on December 10 destroyed the power plant at the naval operating base on Hampton Roads, with a loss estimated at $500,000. Fanned by a strong northeasterly wind, the fire for a time threatened the entire base.

Work has begun on the first 9,600-ton ship at the yards of the Doullut & Williams shipyard, New Orleans. This is the first steel ship to be constructed at New Orleans. Seven other similar ships have been contracted for by the Emergency Fleet Corporation at a flat price of $1,-760,400 each, or close to $185 per ton d. w.

Five hundred Americans, Englishmen and others, a majority of the party being members of crews from the ships captured by the German commerce raiders "Moewe" and "Wolf," have arrived at Aarhus, a seaport of Denmark, from Germany, according to a Copenhagen dispatch. Many of the men complain of the treatment they received at the hands of the Germans while they were interned.

The facilities of the shipbuilding plants of the United States have been released for private work and the shipbuilders of the country may now compete for any and all work in addition to the Government contracts now being completed, according to official announcement of the United States Shipping Board, made during the week. A telegram to this effect was received by the San Francisco Division of the Emergency Fleet Corporation.

Charged with defrauding the Government, F. S. Seamans, Jr., Production Manager of the Emergency Fleet Corporation for the Philadelphia District, has been arrested and is held for trial under $2,500 bond. According to special agents of the Department of Investigation, Seamans spent hundreds of dollars of the Government's money for taxicab rides, in which a young woman manicurist, attached to a large hotel, was his companion. One item of his expense account was a bill for more than $700 for taxicab hire. Seamans was enabled to get the bill through the Corporation Auditing Department because his position gave him power to approve all bills for his district. Seamans had been with the Corporation since February. His salary with the Corporation was $5,000.

The appointment of a commission for the standardization of screw threads was authorized by a recent act of Congress. The purpose is to ascertain and establish standards of screw threads for acceptance and adoption in manufacturing plants throughout the United States. Nine commissioners are to be appointed, one of whom shall be the Director of the Bureau of Standards, who will be chairman of the commission; two commissioned officers of the navy, and four to be appointed by the Secretary of Commerce, two of whom shall be chosen from nominations made by the American Society of Mechanical Engineers and two from nominations made by the Society of Automotive Engineers. The points to be considered are: Type of thread; Dimensions, tolerances and pitch of threads; Rules and formulæ for the determination of dimensions and tolerances to insure interchangeability.

The Public
A Journal of Democracy

Poverty is A Crime!

It isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

INFORMATION WANTED.

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S. "Davy," is inquired for by his mother. Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal. 11-6-18

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City. 6-5-18

Hans Herman Hansen, a native of Bornholm, Denmark, about 30 years of age, last seen at San Francisco, Cal., in 1914, is inquired for. Any one knowing his whereabouts please notify his sister, Mrs. Marcher; address, Modesto, Cal. 3-20-18

News from Abroad

It is officially intimated that there are 1,000,000 cases of influenza in the Dutch East Indies.

Australian engineers have invented three-rail switches for use by railroads where three rails are laid in each track to accommodate rolling stock of different gauges.

France in five years is to have, according to Fernand Bouisson, Under Secretary of State for Merchant Marine, double the merchant tonnage she had before the war, which will be 6,000,000 tons.

United States Government experts have listed twelve woods, 102 barks, nine leaves, three roots, and seventeen fruits and seeds that grow in Latin America as yielding tanning materials of industrial value.

The Duke of Sutherland, it is announced by the Glasgow Herald, has instructed Messrs. Knight, Frank & Rutley to sell 248,918 acres of the Sutherland estate by auction at Hanover Square, London. "The sale will include some of the best salmon fishings and shootings in Scotland, with their lodges."

A London auctioneer, commenting on the fact that he had made seven large real estate sales in two weeks, and that one of them was for $255,000, or $255 an acre, which was $15 more than the highest previous price in the shire, said he accounted for the high prices "by the fact that the price of grain has been guaranteed for a few years, and by the feeling that we shall never revert to free trade."

Jerusalem has been freed from the mosquito pest, it is announced by the Zionist Organization, through the efforts of an American sanitarian, Louis Cantor, who is a member of the American Zionist medical unit which is now operating in Palestine. The city is now practically rid of these carriers of typhoid and malaria. During Mr. Cantor's campaign 350 cisterns were petrolized and put in sanitary condition.

Mexico's new secretary of agriculture and development has organized a bureau for the especial purpose of supplying the republic with agricultural machinery of the most modern pattern at cost in order to avoid speculation and the heavy expense of importation which formerly prevailed and which caused such articles to be very scarce. Besides providing machinery at cost, permanent exhibitions are to be maintained for the purpose of instructing the farmers in the use of the new devices, as also to demonstrate the results of such application.

Maj-Gen. William C. Gorgas, former surgeon-general of the army, is going to resume his work for the eradication of yellow fever in South American countries, which he temporarily abandoned when the United States entered the war. He is to leave shortly for Central and South America, having been preceded by Dr. M. E. Connor, who will assist him in putting into effect the program of the International Health Board of the Rockefeller Foundation. In a recent statement, Dr. Vincent, president of the foundation, pointed out that a survey by Rockefeller experts had led to the opinion that the total eradication of yellow fever was feasible through the extermination of the stegomyia mosquito.

With the Wits

"This is an honest shoe."

"I can see that," said the customer. "It frankly pinches me, although you maintain that it won't."—Kansas City Journal.

"Do you believe in evolution?" "Can't help believing," replied Senator Sorghum, "after seeing how many varieties of politicians a bull moose can develop."—Washington Star.

"I don't know where I'm going to sleep." "Neither do I." "But you have a flat." "Yes; but it's on one of those streets where the automobiles don't quit until it's time for the milkman to start."—Washington Star.

"Pretty dull magazine you're getting out. You'll never interest the public with it." "You don't understand. This is for doctors and dentists to place on their anteroom tables."—Kansas City Journal.

"I suppose you still find old arrowheads when you plow your fields?" "Not any more," replied Farmer Corntossel. "We cleaned them all up long ago. Now we don't find anything but golf balls."—Washington Star.

"Everything depends upon the point of view," quoted the Parlor Philosopher.

"That's right," agreed the Mere Man. "A woman in a décolleté gown may be shocked at the sight of a man in his shirt-sleeves."—Town Topics.

"What became of Piute Pete," asked the visitor at Crimson Gulch. "He joined the army," answered Broncho Bob. "Thought he was too old to fight." "He was. But he was such a fighter that nobody dast tell him so."—Washington Star.

"And when you told him I was married," said the girl who had jilted him, "did he seem to be sorry?"

"Yes," replied the other, "he said he was very sorry—although he didn't know the man personally."—Tit-Bits.

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

257 HANSFORD BLDG., 268 MARKET STREET

Under Capt. Christensen's personal and undivided supervision, pupils of this favorably known school are taught all up-to-date requirements for passing a successful examination before the U. S. Inspector.

THE SEAMEN'S JOURNAL.

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 17. SAN FRANCISCO, WEDNESDAY, JANUARY 1, 1919. Whole No. 2519.

COURTS EMASCULATE SEAMEN'S ACT.

Another Decision to the Advantage of Foreign Shipping.

Since the enactment of the Seamen's law the various decisions by Federal District and Appellate Courts have been almost unanimous against the contention of the seamen.

During the past week the United States Supreme Court rendered its first opinion on the constitutionality of the Seamen's Act. The text of this opinion is now en route and will be published in next week's issue of the Journal.

Herewith is the adverse decision just rendered by the United States Circuit Court of Appeals, together with comment by Attorney Axtell of New York.

OPINION OF THE COURT.

United States Circuit Court of Appeals, For the Second Circuit.

Hassan Abdu, et al., Libelants-Appellants, against the Steamship "Nigretia," her Engines, etc., Limerick Steamship Company, Ltd., Claimant-Appellee.

Before Ward, Rogers, and Hough, Circuit Judges. Silas B. Axtell, for Libelants-Appellants. Kirlin, Woolsey & Hickox, for Claimant-Appellee. Ward, Circuit Judge.

This is a libel by six Arabians, members of the crew of the British steamer "Nigretia," to recover wages, one month's extra pay, the value of their effects left on board and damages. The claimant of the steamer defends on the ground that the libelants were deserters and as such had forfeited their wages and effects under the British law.

April 16, 1916, the libelants signed articles at Cardiff, Wales, for a period of two years. The master, while boarding his ship in the harbor of St. Nazaire, just before sailing for New York on the voyage ending December 1, 1916, dropped the shipping articles and some other papers into the sea. The British Consul at New York instructed him as a precautionary measure to draw up a substitute copy of the original articles and have the crew sign on again before him.

On the morning of December 13, the day before the vessel sailed, the master took the crew to the Consul's office, where all signed on again except the libelants, who refused to do so unless paid their wages in full to date. The relation of master and seaman continued notwithstanding the loss of the original articles and the master refused this demand and ordered the libelants to return to the steamer. Instead of doing this they went to counsel, who advised them to demand half wages under Sec. 4530 U. S. Rev. Stat., which reads:

"Every seaman on a vessel of the United States shall be entitled to receive on demand from the master of the vessel to which he belongs, one-half part of the wages which he shall have then earned at every port where such vessel, after the voyage has been commenced, shall load or deliver cargo before the voyage is ended, and all stipulations in the contract to the contrary shall be void: Provided, such a demand shall not be made before the expiration of, nor oftener than once in five days. Any failure on the part of the master to comply with this demand shall release the seaman from his contract and he shall be entitled to the full payment of the wages earned. And when the voyage is ended every such seaman shall be entitled to the remainder of his wages which shall then be due him as provided in Section forty-five hundred and twenty-nine of the Revised Statutes: Provided Further, that notwithstanding any release signed by any seaman, under Section forty-five hundred and fifty-two of the Revised Statutes, any court having jurisdiction may upon good cause shown set aside such release and take such action as justice shall require. And Provided Further, that this section shall apply to seamen on foreign vessels while in the harbors of the United States and the courts of the United States shall be open to such seamen for its enforcement."

Later on the afternoon of the same day the libelants, accompanied by an interpreter, met the master as he was leaving the Custom House after clearing the vessel. There is a dispute as to what occurred, the libelants saying that they demanded half wages and the master saying that they simply demanded their money and he told them to return to the ship and he would take the matter up and straighten it out. The libelants did not return to the ship but immediately filed this libel and the ship, which was ready to sail, having been released on stipulation, sailed down to the anchorage grounds in the lower harbor of New York and proceeded on her voyage at six o'clock on the morning of the following day.

Judge Manton adopted the account given by the master held that the libelants were deserters, British Merchant Shipping Act of 1894, 57 and 58 Vic. Ch., 60, Pt. 11, Sec. 221, and as such had forfeited their claims to wages and to their effects left on board. We concur in this conclusion. It is quite plain that the master was not obliged to waive and did not waive his right to treat the libelants as deserters who had terminated all relations with him and the ship by their previous conduct, whichever of the accounts be adopted.

The decree is affirmed with costs.

Editor, Seamen's Journal:

Copy of the opinion just handed down by the United States Circuit Court of Appeals in the case of Hassan Abdu, et al. vs. S. S. "Nigretia," Limerick Steamship Company, etc., is submitted herewith.

This was an appeal from a decision by Judge Manton, in one of the first cases brought under Section 4530, as amended by the Seamen's Act. In this opinion, the Circuit Court of Appeals, without giving any consideration apparently to the main point in the case, as indicated by our brief, has held that seamen who have gone ashore at the request of the master, for the purpose of signing new articles, are deserters before they have made a demand for half wages under Section 4530, and before they have expressed any intention not to return to the ship.

The Circuit Court of Appeals, without a dissenting opinion, in the Second Circuit, has deprived five seamen of about $310.00 wages each, that they have earned by the hardest kind of work in the fire-room of the S. S. "Nigretia," practically all the money they had earned.

These seamen like others who have sought to enforce Section 4530 of the Seamen's Act against foreign vessels, have been defeated in the lower court on one ground and in the Circuit Court of Appeals on another ground. The evident desire of the courts is to misunderstand and defeat in any event, the efforts of the seamen to break away from the bondage that has always held them.

This case was taken up by the International Seamen's Union of America, and the expenses of this appeal were borne by them. Already the case has been before the Supreme Court of the United States on the question of opening the courts of the United States to seamen without the prepayment of fees and costs.

Readers of this paper will remember that this same Circuit Court of Appeals refused to compel the clerk of the court to accept the record on appeal without the prepayment of costs. A writ of mandamus was granted by the Supreme Court, and the case came up for argument there, the undersigned being attorney for petitioners. The seamen were again defeated, but by a vote of 5 to 4, four of the learned justices of the Supreme Court dissenting.

I do not care to criticize the opinion of the Supreme Court in rendering their decision, as they had in a previous case, Bradford vs. Southern Railway Co., 195 U. S., 243, made a decision, that would seem to make inconsistent a reversal in the case before them. However, when the matter was presented to the committee in Congress that had had to do with the passage of the law, by Mr. Andrew Furuseth, President of the International Seamen's Union of America, an amendment was quickly drafted, and attached to the Civil Sundry Appropriation Bill. It went through as a rider, and that bill being in the last stages of development, our amendment opening the court, including the Appellate Courts, became a law within five days.

I think it extremely likely that a Writ of Certiorari to review this latest decision of the Circuit Court of Appeals, will be granted by the Supreme Court of the United States. I take this occasion to write to you and to seamen, so that they may know what the courts of the United States are doing with the Seamen's Act; how it is generally regarded, and the efforts that are being made to enforce it.

The facts in the case are stated in the opinion of Judge Ward, Circuit Judge. The seamen went ashore at the request of the captain for the purpose of signing new articles. They told the captain they didn't want to sign new articles

until they received the wages already earned, knowing nothing of the Seamen's Act. They went away from the Consul's office, to seek legal advice. They were referred to me. They were advised to go back and ask the captain for half wages, under Section 4530 of the United States Revised Statutes. They did so about one hour later in front of the British Consul's office on Coenties Slip, New York City. That there was a demand made, was the finding of the United States District Trial Judge. That there was a refusal to pay or failure to pay, within the meaning of the statute, there can be no doubt. The statute reads:

"Every seaman on a vessel of the United States, shall be entitled to receive on demand, from the master of the vessel to which he belongs, one-half part of the wages which he shall have then earned, at every port where such vessel, after the voyage has been commenced, shall load or discharge cargo before the voyage is ended, and all stipulations in the contract to the contrary shall be void . . . Any failure on the part of the master to comply with this demand, shall release the seaman from his contract and he shall be entitled to the full payment of wages earned. . . . And further provided, that this section shall apply to seamen on foreign vessels while in the harbors of the United States, and the courts of the United States shall be open to such seamen for its enforcement."

The latter part of this section has been amended to read:

"And the courts of the United States, including Appellate Courts, shall be open to such seamen for its enforcement."

In conclusion I beg to call your attention also to the fact that the learned Circuit Court of Appeals in the Second Circuit has held (see last paragraph of the opinion) that the Merchants Shipping Act of Great Britain, Act of 1894, Chap. 57-58, relating to deserters, applies in this case. In other words, action by the United States to take away from foreign governments the control and jurisdiction in matters of wages of the crews of their vessels, while in our ports, has been in vain. The definition of desertion, the penalty therefor, as set forth in the Seamen's Act, which abrogated all foreign treaties in opposition to its enforcement, has been for naught.

Very truly yours,
S. B. AXTELL.

New York, N. Y., Dec. 19, 1918.

TOBACCO AND SPEED.

The expression "smoke up," signifying hurry or put on more speed, has really a deeper significance than one would think at first impulse. The fact is that civilization's progress is pretty well measured by the time the nations spend in their smoking. We do not mean in the number of smoking hours of their day, but the speed with which the actual smoking is done. Thus the slow-moving Turk dreams between puffs at his hookah just as the cross-legged Indian of America protracted his peace conferences by the slowest possible pulls at the befeathered calumet.

The Dutchman and the German peasantry were a step farther in pipe enlightenment and sent up denser clouds of smoke, although they still lingered conservatively over the task that allowed time to study the designs enameled upon large and glistening pipe bowls.

Next came the smaller, more active pipes of the Irish, and their briar roots, corn cobs, and calabashes that still are affected by some of our orderly but not too eager citizens.

Then we come to the more highly organized cigar smokers who scorn the intervention of a pipe stem between their lips and the fragrant weed. With the cigar there is clearly less opportunity for delay and the pensive moment. Once begun, the smoke must be hurried through to a finish, not, of course, with break-neck or choke-neck speed, but still with consistent continuity. So the cigar smokers are generally the men of action, and also the sports and the Wallingfords.

But next we make the wide leap to the cigarette, and there the smoker of real speed reaches his apogee. Once the match has been applied there is no more possibility of a letup than there is to hold back the hurling of a pineapple hand grenade after the pin has been drawn and the lever raised. The loosely rolled and fully ventilated tobacco burns like powder in a Big Bertha and one has to have his bellows working forty strokes to the minute to keep the lungs empty while the fumes pour forth from mouth and nose and, some claim, even from eyes and ears, in unremitting clouds. It is not easy to see that a man will select that type of smoking that harmonize with his own nature. To be sure, and if that is admitted, what must we deduce from a smoking statistics? Here are the figures in black and white, gathered in by the Wall Street Journal.

Since 1913, the year before the war began, the output of cigars, chewing and smoking tobacco and of snuff has actually fallen off, while the manufacture of cigarettes in that period has risen 160 per cent. Of this growth 20 per cent. is credited to the present fiscal year. No less than 40,000,000,000 cigarettes is the estimate of cigarettes that will be manufactured and sold in America during the current twelve months; but even that stupendous amount will not be the limit either of possible manufacture or possible consumption.

Eighteen years ago our cigarette crop was a little over three billion, about one-twelfth what it now has grown to be. Speed, that is probably the secret! It is the same impulse that helped us to send a couple of million soldiers to France in a period of time during which pipe smokers might have transported only one-tenth that number.

We have not discussed the merits of the various smokes, nor the pleasure they may give, but only their relative speed. Selah! —New Orleans Times-Picayune.

PEACE AND ROYALTY.

The mills of the gods have caught and crushed the Hohenzollerns and Hapsburgs and the Kings of Bavaria and Bulgaria and what not. But they have still much crushing to do. Every remaining king, whether well-meaning figure-head or despot, should and must go. These are now few in number. Then, we agree with the German Socialists that no man who had anything to do with starting this war should remain in public life. In Russia, in Austria-Hungary, and in Turkey they are gone. We hope and trust that the spirit of revolution abroad will not die until all the makers of secret treaties are cast out, and with them, as among the worst enemies of mankind, the armament-manufacturers, the Krupps, the Creusots, the Armstrongs, the Whitworths, and our own lesser armor and gun-makers. We desire no end to revolution abroad until customs-houses everywhere have gone by the board. We wish no end to democratic ferment in Europe until the professional diplomat of the past has been ground flat, and with him those alleged statesmen who believe that the backward or sparsely-inhabited spaces of the earth exist only to be exploited. We wish no end to the revolution until there shall no longer be talk of developing hinterlander, spheres of influence, and colonies, but of some means of holding them in trust by joint international agreement for the benefit of those to whom the soil rightfully belongs. Thus we would have England retire from Egypt and Persia, the Italians from Tripoli, and Japan from Kiao-Chou, France from Cochin-China and Madagascar, and Belgium from the blood-stained Congo, while the United States sets the example by retiring from the Philippines, Haiti, San Domingo, and Nicaragua. We wish no limit to the spread of liberalism until the vicious doctrine that a country shall protect by the force of arms its citizens who invest abroad shall be forever discarded. For we are not of those who can see the mote only in the eye of our Allies or enemies. There are those in plenty—men like Taft and Roosevelt, preachers of reaction and hate —in this country for whom the mills of the gods are turning slowly—slowly, but with the terrifying, inescapable certainty which marks the progress of the glacier that no human agency can stay.—From The Nation, New York.

A STRANGE PARADOX.

Have you ever noticed that those who perform the useful work in any land are always nearest the gulf of want; that the men and women who, day by day, build the very edifice of our social system are at the same time always nearest the bread-line?

Theirs is the task to grow, gather, and prepare the food we eat; weave and fashion the clothes we wear; erect the homes we dwell in; dig deep in the bowels of the earth for the coal to warm us, and drive the wheels of industry; man the shops and factories, and perform the hundred and one services to Humanity.

Without their assistance the world would surely tumble itself headlong into chaos. And yet, when they close their eyes in death, after a lifetime of useful labor, they leave behind them, in the main, little more than they brought into the world at their birth.

If wealth be the reward of usefulness, surely these—the careworn, hard-muscled, grey-haired, and brow-furrowed toilers—would be rich in pocket, and comfortable in life. They furnish the wherewithal by which the world is able to function day by day; without them the privileged class in our midst could not exist a single day. They are, in short, the one real organic, useful unit in society.

Still the fact remains that the workers, as a class, are poor. It is an unfortunate fact, but incontestable all the same. Their dwellings are very often the slums; their lives often utterly squalid; their bodily frames, sad to say, often stunted, disfigured, and broken.

And worse than all, they are robbed of the beauty of the world in which we live; robbed, too, of the finer gifts of thought and of culture. To them, aspiration and achievement is denied—often snatched from their grasp—notwithstanding that it is their rightful heritage which has come down the ages to invest them with dignity and strength.

It is indeed a strange paradox that those who serve no useful purpose in our land are blessed with the world's goods in a plenteous manner, while those who perform the useful functions of life seem to be condemned to suffer the blighting torments of hopelessness, despair, and want. —The Australian Worker, Sydney, N.S.W.

One should never put on one's best clothes when one goes out to fight for Liberty and Truth.—Ibsen.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Bethlehem Planned to Ignore Contract.

While Charles M. Schwab of the Bethlehem Steel Company was assuring business men at an Atlantic City reconstruction meeting that he favored labor unions—of a certain variety—President Grace of the same company was asking the national war labor board to release it from an agreement which would establish collective bargaining in the Bethlehem plant.

The request was refused by Joint Chairmen Taft and Manly in a letter which says:

"You (Grace) personally agreed to the installation of a system of collective bargaining satisfactory to the board and under the supervision of the board's examiners. You now wish to repudiate that system of collective bargaining and ask that the board's examiners be withdrawn.

"Your company asked and received the assistance of the board in securing increased compensation from the war and navy departments to meet whatever increases in wages that were brought about by the board's award.

"The findings of the board do not require that you continue in your employment any man whose services are no longer needed because of the cancellation of war contracts. The board, however, does require that you carry out, in good faith, the findings of the board upon the basis of which your employees consented to remain at work and thus maintain the production and the profits of your company.

"This is a question of the good faith of your company and of the Government itself. If the award of the board should now be repudiated your workmen would have every right to feel that they have been deceived and grossly imposed upon by your company, by the war labor board and by the other officials of the Government who prevailed upon them to remain at work on the assurance that they would be justly dealt with.

"We must, therefore, insist that the machinery of collective bargaining, already established, be maintained and permitted to function, and that the other findings of the board be carried out fully and promptly."

Basic Eight-Hour Day Won't Satisfy Labor.

A basic eight-hour day does not establish the shorter work day, says President Gompers, writing in the American Federationist on the acceptance of the basic eight-hour day by the steel trust.

"The A. F. of L. and a number of its affiliated international unions had under way a campaign of organization among the steel workers to end the industrial autocracy of the steel corporation," says President Gompers. "It was to be expected that some counter-move would be made. The announcement of a basic eight-hour day was a counter-move.

"Some two months have passed since the announcement was made by Judge Gary. If there was any doubt then about what the basic eight-hour day meant in the steel industry, there is none now. It meant and means a basis for figuring wages—and it can be manipulated to suit steel corporation requirements until the workers in the steel industry organize sufficiently to exercise an influence in the ordering of their lives.

"When labor speaks of the eight-hour day it means a work day of eight hours' duration. It means an actual eight-hour day. It is that kind of an eight-hour day that organized labor is striving for, not only in the steel industry, but in every industry in which it has not already been secured.

"The campaign of organization among the steel workers will continue. The movement will go on. No specious pleas, no diplomatic announcements, will stop it. The time required to organize and free the steel workers of America may be long, or it may be short. But, soon or late, it will be done. All things move toward freedom today. All men, all elements, move toward liberty. All society moves toward greater consideration for humanity. The steel mills must go the way the world goes, toward liberty!"

Flu Toll Is Heavy.

At a recent New York meeting of presidents of life insurance companies one official stated that from a study of statistics he has reached a general impression that deaths resulting from the Spanish influenza epidemic in this country totaled in the neighborhood of 400,000, which, he said, meant an economic loss of 10,000,000 years.

The average age at death of all the cases submitted was 33 years. "This new form of influenza," it was stated, "has been taking the young and vigorous—those whom we expetced to undertake much of the world's work. We may say that there is an average economic loss of about 25 years of active life in the case of each of the thousands of deaths from influenza. In the 1889-91 epidemic of influenza the old and feeble seemed most liable to succumb. This condition does not seem to hold now and millions of the best years of life have been stolen by this scourge."

Want Railroads Returned.

At a recent New York meeting of 200 railroad executives, representing 90 per cent. of the railroads of this country, it was voted to ask the Government to release the railroads now under Federal control and establish a more "progressive control" than existed before the war.

While the resolutions make no specific mention of the roads' attitude toward labor, this question was discussed. A majority of the executives, it was stated, agreed with Director General of Railroads McAdoo's recent statement that the limit of wage increases for railroad employes has been reached.

A committee was appointed to urge the return of the roads to private ownership and assist Congress in passing legislation that will permit of a more extended regulation by the Government than existed before the war, but at the same time per-

World's Workers

Three labor representatives, Messrs. Harry Gosling, J. W. Ogden and James Gavin, have been appointed members of a provisional council to advise the Department of Commerce and Industry, recently set up by the British Board of Trade.

The status of the trade unions in the Scandinavian countries has enlarged since the war's inception, and the present membership record is as follows: Sweden, 186,146 male and 14,402 female members; Norway, 93,000; Denmark, 179,284, of which 27,776 are women.

A conference of British government officials and representatives of the National Union of Railwaymen has agreed on an eight-hour day for these workers. Committees of both sides will review wages and other questions. The railwaymen have been asking for improved conditions and several weeks ago notified the government that the no-strike truce, agreed to because of the war, was at an end.

By an overwhelming vote of 1100 votes to 15 the London (England) Actors Association recently reselved to go into liquidation in order to reconstitute itself as a trade union. As a trade union the actors will be in a position to demand fair contracts for the performers. Failing a satisfactory settlement of their grievances an actors' trade union would be in a position to strike to enforce consideration of their demands.

The Socialist newspaper Populaire of Paris announces that Arthur Henderson, former Minister without portfolio in the British War Cabinet, acting on behalf of the British working classes, has called a meeting of international Socialists at Lausanne, Switzerland, January 6. Henderson, says Populaire, took this action in agreement with Camille Huysmans, secretary of the Belgian Socialist Internationale, and Henri Van Kol, Socialist leader in the Dutch Upper Chamber.

In an international survey of increase in food prices during the war, the Labor Gazette, published by the British Government, says: "In all commercial countries, whether neutral or belligerent, the last four years have been marked by an advance in prices of the necessaries of daily life so great as to cause an unprecedented reduction in the purchasing power of the pre-war rates of money wages and to give rise to repeated demands on the part of the manual labor and salaried classes for successive readjustments of their rates of pay to meet the rapidly changing conditions."

It is understood that the London (England) Fire Brigade, after carefully considering the award of the chief industrial commissioner on the subject of a firemen's union, has decided to accept the settlement as entirely satisfactory to the whole body of London firemen. Sir George Askwith's award, among other things, has given the men the right of collective representation, the right to appoint an outside secretary and spokesman, and the right to bring their grievances before ether the chief officer, the Fire Brigade committee, or the London County Council itself. The decisions will shortly be placed before a meeting of the men's delegates for ratification.

INFORMATION WANTED.

Thomas F. Noone, a native of Ireland, born 1887, last heard of in New York, Feb. 15, 1918, is inquired for by his sister, Mrs. Thomas J. Condry, 9 Rosseter St., Great Barrington, Mass. 10-16-18

Members of the crew of the SS. "Kellogg" who were on board when she picked up the SS. "Catania" can obtain money due them for salvage services by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Anyone knowing the whereabouts of Jan Zwart, will please communicate with Consul General of the Netherlands, Mills Bldg., Montgomery and Bush streets. 10-23-18

Pacific Coast Marine.

With the sailing of the motor-ship "Libby Maine" from Seattle, the Pacific Steamship Company's new fleet of seven freighters, assigned to off-shore trade between Seattle and the Orient, are all under way.

Preliminary work for the construction of a 10,000-ton dry dock at Portland, Ore., to be built by Joseph Supple, is under way. The site is in the upper harbor, where no dry dock up to the present has been available.

Frederick L. Murphy, who has been associated with Archibald Kains of the San Francisco Clearing House, has left for Washington to become first assistant to John H. Rosseter, director of operations of the United States Shipping Board

The barge "Celtic Monarch" has been towed to the Rolph yards at Eureka, where work of rerigging her as a three-masted ship has begun. New docks, new housings and other wood work will be done here and the "Monarch" will then be taken to San Francisco, where upper masts and yards will be placed and rigged.

The shipping firm of Thorndyke-Trenholme Company, Inc., has received a cable to the effect that the French auxiliary power schooner "Fraternite" has been towed to Balboa with her boilers burned out. The "Fraternite" is one of thirty carriers built for France in Northwest yards. She is on the way to France with flour.

The "Heffron," a twelve-thousand-ton steel freighter, was launched at the Bethlehem Shipbuilding plant in Oakland on Dec. 29. At the Moore shipbuilding plant the "Puckanuck" and "Oskawa," two 9400-ton steel freighters, will be launched on December 31. The "Oskawa" will have a short trial trip a few days after the launching.

Two grizzled heroes of the French Navy have been assigned to command the new French auxiliary schooners "Givenchy" and "Justice," outfitting at Seattle. They are Captain Oliver de L'Anglais and Captain Francois le Mentec. Both wear decorations conferred by France for saving passengers and crews when their ships were sunk by U-boats.

W. R. Grace & Co. have been named operating agents for four additional vessels in the service of the U. S. Shipping Board. The vessels are the wooden steamers "Fassett" and "Bottineu," recently completed at Tacoma, and the steel freighters "Eastern Light" and "Eastern Shore," built in Japan for the Shipping Board. The latter two will load flour for the Atlantic coast.

Private advices received from Washington state that the Federal Shipping Board has approved the contract with the Astoria Marine Iron Works for the construction here of a marine railway, with a capacity for handling 6000-ton vessels. The marine railway will be located a short distance west of the port of Astoria docks, and construction on it is to be commenced at once.

Another order following on the heels of many others abrogating war restrictions on the Pacific Coast has been posted whereby the licensing of coastwise and harbor vessels will be done away with. Under the new regulation it is not necessary for seamen in the coastwise trade to provide themselves with identification cards, but this rule does not apply to seamen engaged in foreign trade or to vessels from foreign countries touching at United States Pacific ports.

Sponsored by Miss Margaret Snell, daughter of Judge and Mrs. W. H. Snell of Tacoma, the Ferris-type steamer "Fort Harrison" was successfully launched at Tacoma, Wash., on Dec. 26. This makes the fifth wooden vessel turned out by the Tacoma Shipbuilding Company, builders of the "Fort Harrison." This company has five other vessels on the ways, two of which are fairly well along. Officials of the company report that they have considerable inquiry for new work.

The second vessel of the Rolph Navigation Company fleet to be named after the wife of San Francisco's Mayor will be the next vessel to slide off the ways at the Rolph shipyards at Eureka. This will be the third of the four-masted barkentines of the "Conqueror" class, which is expected to be ready to take the water some time between Christmas and New Year's, and which will be christened the "Annie M. Rolph." The other vessel named for Mrs. Rolph is the four-masted steel ship "Annie M. Reed." The "Annie M. Rolph" will be the seventh vessel to leave the Rolph ways this year, the others being the four-masted barkentines "Conqueror" and "Hesperian," the cargo steamers "Annette Rolph," "Georgina Rolph" and "Joan of Arc," and the large gas-propelled ferryboat "Edna C."

According to popular rumor, a considerable number of the Navy Reserve officers desire to resign from the service as soon as Uncle Sam will let them to return to the merchant marine, where the salary inducements are more attractive. Officers say that the men who were patriotic enough to enlist are now being given any old ship that pleases the Government, while the men who did not tender their services during the war are now reaping the reward in the way of good and substantial income. In this connection it was announced that Captain Leo Ball of the China Mail steamship "China" had resigned to become a Shanghai pilot. The compensation for this position is said to be on a par with that of an Admiral of the United States Navy, and it is said there are other positions commanding a high wage that are open to those who are not tied up by enrollment in the reserves.

With the launching of the steamship "Edgehill" and the delivery of the steamship "Edgecoombs" on December 24, Skinner & Eddy of Seattle completed another remarkable record in ship production. The launching marked the twenty-fourth craft sent down the ways from the No. 1 plant since January 1 last, and David Rodgers is striving to have another vessel ready by December 31 to bring the record to five ships per way for the year just closed. The "Edgecoombe" is the thirty-second Skinner & Eddy ship delivered to the Shipping Board and the thirty-eighth completed by the plant since its inception. Mrs. J. S. Graham, wife of the commandant of the Puget Sound Navy Yard, sponsored the "Edgehill." At the same hour on December 24 the McAteer shipyard launched the 2500-ton wood auxiliary powered schooner "Mount Hamilton," built for Mons. Isaakson of Norway. This is the first McAteer product built in Seattle and another is scheduled to be launched in January.

That the greater part of the kelp harvesting fleet of the Hercules Powder Company of San Diego will be sold to the Henry C. Peterson Company, Inc., of San Francisco, was announced during the week. Peterson, it is reported, will purchase the ocean-going tug "Chief," seven large ocean-going barges, with a total capacity of about 3500 tons, and the harvesters "Joplin," "Bacchus" and "Kenvil." The harvesters are to be dismantled and converted into barges. The "Chief," of nineteen tons gross, steamed for San Francisco Tuesday night. The remainder of the fleet probably will sail for San Francisco next week. The sale of the fleet effectually disposes of the report that the Hercules Company would continue operating its $4,000,000 plant at Chulavista on a small scale. Recently the company, when potash and other kelp by-products took a tremendous drop following the cessation of hostilities, appealed to American consumers of acetone and other chemicals derived from potash, to assist in keeping the local plant in operation during peace times by purchasing its by-products. Only 24,000 tons of kelp was harvested on the Southern California coast during November, compared to an average of 75,000 tons per month during the war.

Honolulu has become a great booster for the wooden ship and is in favor of the Government continuing the construction of the class of vessels now utilized by the Matson Navigation Company to handle the products of Hawaii to the mainland, according to advices received when the "Tenyo" arrived in port recently. The attitude of the islanders is based upon the fact that the wooden ship has stimulated shipyard work at the plant of the Honolulu Dry Dock Company and other concerns interested in shipbuilding and repairing. It is estimated that during the past three months work costing nearly $1,000,000 has been ordered done on wooden craft, owing to leaks, boiler and rudder trouble and other difficulties encountered in the operation. According to the managements of the various local shipyards, the Pacific Coast-built wooden ship will result in a constant revenue for many years to come, or at least as long as the vessels of this type are in operation. Nearly every vessel is repaired to some extent before being sent to Honolulu, and upon arrival there it is seldom that the cargo can be loaded until other and additional repairs are made. As many as six of these vessels are laid up for repairs at Honolulu simultaneously and a huge gang of workmen has been added to the pay-roll of Hawaiian ship-repair concerns.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor. California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

LAUL SCHARRENBERG ..... Editor
S. A. SILVER. ..... Business Manager

TERMS IN ADVANCE.

One Year, [illegible] - $2.00 Six months - $1.00
Advertising Rates on Application

Business and Editorial Office: Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents nor for the return of manuscript.

WEDNESDAY, JANUARY 1, 1919.

SHIPPING FINANCE.

A striking picture of the gigantic profits made by shipping firms in neutral countries is supplied by the report that the shareholders of the Copenhagen Steamship Company "Danmark" are to receive another 67 per cent. as the final quotation for their shares, which makes their liquidation value work out at 987 per cent. At the beginning of last October there was paid 920 per cent. on shares to the value of 12,880,000 kroners. Now a further 935,000 kroners, or about 67 per cent., is to be paid.

Similar prosperity seems to prevail in shipping circles of Holland. At any rate, a recent European exchange quotes the following statistics as to the economic development of Dutch shipping firms during the war: The total capital of the more important firms has increased from 98,034,000 florins in 1913 to 123,635,000 florins. Their liabilities have decreased from 30,586,000 florins to 28,054,000 florins, while their reserve funds have increased from 28,405,000 florins to 148,555,000 florins. The number of vessels, which before the war was 277, has increased, in spite of losses caused by the war, to 307. Their gross registered tonnage has increased from 968,386 to 1,089,668 tons.

From all accounts the real seafaring population of these neutral countries has shared only to an insignificant degree in this extraordinary prosperity.

The seamen of neutral and belligerent countries freely sacrificed their lives. In return, they received a slight increase in wages. But the topheavy profits went to so-called shipping "interests" that never go to sea.

And what is to be the reward of peace for the men of the sea? Is it to be renewed competition with Asiatics, the cheapest available labor in all the world? Or is there at last to be at least a semblance of genuine appreciation and protection for the toilers of the sea?

The world peace conference will supply the answer.

The employer of child labor is a homicide on the wholesale.

FICKERT'S LATEST MOVE.

Charges of murder against Ed. Nolan, President of the San Francisco Machinists' Union and one of the defendants in the Preparedness bomb cases, were dismissed during the week by Judge Franklin Griffin. Strange to relate, District Attorney Fickert, represented by one of his deputies, agreed to the dismissal.

It is obvious that the action of Fickert in dropping the charges against Nolan amounts to a confession on the part of the District Attorney that the convictions of Mooney and Billings, and the indictment of Nolan were procured by fraud. A fundamental part of Fickert's story of the Preparedness Day outrage was that Nolan made the bomb. If he now confesses that Nolan did not make the bomb, then the story upon which Mooney and Billings were convicted falls to pieces as completely as his indictments against Nolan.

During the trial of Israel Weinberg (who was acquitted in twenty minutes) Fickert, through an assistant, tried to make capital of the fact that two of the defendants, Mooney and Billings, had been convicted. He said in substance:

> If one is guilty, all are guilty. They were all together in the commission of this crime. If this man is not guilty, then the others are not guilty.

Nolan was denounced to the public as a ten fold murderer because the bomb they said he made killed ten people. He was indicted by a Grand Jury before which not one scrap of real evidence was laid. His home was invaded and turned topsy-turvy by a corporation-owned district attorney and by detectives who answer to corporations. His wife was insulted. His child was terrorized. He was dragged from the bosom of his family, this honest working man, and thrown into jail. He was held behind steel bars as a murderer for nine long months. Meanwhile the public was told that the evidence against him was absolute. Under glaring headlines, the newspapers, quoting the District Attorney, said that the ingredients of high explosives such as had been used in making the bomb, were found in Nolan's home. Later, the substance labeled by Fickert as "the ingredients of high explosives" turned out to be common Epsom salts, a medicine to be found in almost every workingman's home. When forced to reveal the nature of his "evidence," the rascal blandly admitted it was Epsom salts. He then hired an "expert" witness who tried to make a jury believe that this household medicine might be used in manufacturing a bomb.

Finally, after having spent nine months in jail, Nolan was admitted to bail. He was released after the Oxman perjury expose on the request of Captain of Detectives Duncan Mathewson, who admitted that the Police Department had no evidence against the machinist. At that time Mathewson was frightened by the Oxman sensation which sent the prosecution tottering toward complete collapse. The man they claimed made the bomb was set free on $250 bail on each charge of murder.

And now he has been virtually dismissed—turned loose without as much as an apology by the public official who framed and conspired against him.

All this, fellow workers, took place—not in Russia or Prussia, but in San Francisco, California, U. S. A.

WELCOME VISITORS.

Tom Chambers, treasurer of the National Sailors' and Firemen's Union of Great Britain and Ireland, and Captain Edward Tupper, organizer for the Union, arrived at San Francisco on Saturday, December 28.

The distinguished visitors were received at the Ferry Building by a committee representing the Pacific District of the International Seamen's Union of America. Both are old-timers in the British Seamen's movement, having personally participated in the many struggles of the splendid organization which they now have the honor to represent in America. The direct information brought by these two well-tried and experienced men is of a most encouraging nature. They confirm the JOURNAL's contention that but few men out on the Pacific Coast can realize the marked changes that have taken place in old England during the past few years. The National Sailors' and Firemen's Union now has a membership in excess of 80,000. Translated into American money the Union's cash assets (meaning real money) figure up to three-quarters of a million dollars.

The Marine Cooks, Stewards, etc., of Great Britain and Ireland are organized separately; so are most of the fishermen. Hence the organized strength of Britain's seafarers is today way above the one hundred thousand mark.

A special meeting for all seamen in port was held in honor of the two visitors on Monday evening. An account of this meeting will appear in next week's issue of the JOURNAL.

Captain Tupper expects to return to England at an early date, but Tom Chambers will stay long enough to attend the annual convention of the International Seamen's Union of America, which will be called to order in Galveston, Texas, on Monday, January 20.

DEATH OF CHARLES LARSEN.

Charles Larsen, a member of the Sailors' Union of the Pacific since 1897, a charter member of the Alaska Fishermen's Union and for the past three years Patrolman for the latter Union at San Francisco, died suddenly at St. Luke's Hospital, in San Francisco, on December 26, due to acute stomach trouble.

"Charley" Larsen was well and favorably known by thousands of sailors and fishermen along the Pacific Coast. Throughout his twenty-one years of union membership he was a quiet but active worker in the great movement he loved and served. He is survived and mourned by a wife and three sons, all residents of San Francisco.

Funeral services were conducted under the auspices of the Alaska Fishermen's Union. Interment was at the Mount Olivet Cemetery. The deceased was 42 years of age and a native of Sweden.

Farewell, old friend! Heaven always gives its favorites an early death!

It has been well said that indifference is incompatible with love. The same may as truthfully be said with reference to all other phases of mental absorption. For instance, the so-called calmness of the debater on any subject of importance usually proves nothing more than lack of interest in the result.

"NEWS" ON CHINESE CREWS.

While Captain Dollar is eulogizing his Chinese crews the objects of his esteem are continuing to give public performances of their worth and valor.

A single issue of the San Francisco Bulletin contained the following two separate and distinct news items concerning the doings of Mr. Dollar's special pets:

CHINESE PANIC CAUSES LOSS OF CREW OF BOAT.

Panic among the Chinese crew of the "Benita Juarez" was responsible for the loss of the lifeboat containing Second Assistant Engineer Charles Byrne, an Oriental, when the ill-fated vessel foundered in a hurricane forty miles off the island of Molokai on December 3, according to the statements of Captain O. Damzog and First Mate M. A. Adamson, who arrived here on the Matson liner "Sachem" this morning.

"The Chinese lay in the bottoms of the two lifeboats when the vessel went down, paralyzed with fear and refused to pull a stroke," said Captain Damzog this morning. "The loss of the boat containing the engineer was in all probability due to his being unable to bring it ashore unaided."

The survivors, including Captain Damzog, who was picked up in the water; Chief Engineer Francis Mathewson, First Mate Robert Anderson, Second Mate Martin Adamson and First Assistant Engineer Charles Erandt, suffered great hardships during their thirty-hour pull to the island of Lanai, where they landed in the surf.

22 CHINESE ON SHIP ATTACK CHIEF ENGINEER.

Twenty-two Chinese aboard the steamship "Arabien," of the Matson Navigation Company, under contract of the United States Shipping Board, rebelled this morning while the "Arabien" was tied up at Pier 41. The Chinese were to be sent back to Japan, where they were shipped a year ago.

When Chief Engineer Geisler called the crew on deck to explain that a photographer was coming for their pictures, so they might be sent back to China, they attacked him and attempted to throw him overboard.

But Geisler weighs 360 pounds, and he says nothing short of a tidal wave could get him over the rail. Mate Heisterberg covered the men with a gun, but was attacked from behind by two Chinese. They succeeded in getting the weapon, but were unable to work the safety catch.

They swarmed over the rail and were swallowed up in Chinatown before they could be followed.

Comment upon the foregoing seems entirely superfluous. This is "news" which should serve as a reminder to the American people that if Captain Dollar had his own way in framing and enacting shipping laws such scenes as the foregoing would be daily occurrences. For the Dollar method of "saving" the American Merchant Marine means Chinese manning of everything that floats.

Labor has three great movements by which it can advance its interests and better its condition—its union movement, by which it lessens the hours of toil and increases its wage; its political movement, devised to protect it against the parliamentary attacks of the common enemy and to advance its affairs governmental; and the co-operative movement, through which it can reap the benefits of the wage advance it compels through the power of its union, and eventually put an end to the robbery and profiteering of which it is the victim in the present era of commercial rapacity.

In politics the minority of the voters, no matter how great their numbers, can accomplish nothing. In trade unionism the minority of the workers, though comparatively few in numbers, as it happens, have made their influence felt materially upon every phase of labor's existence.

THE RED FLEET OF RUSSIA.

American Correspondent Visits Russian Warships in Baltic and Takes Notes for U. S. Readers.

In January, 1918, the Soviet Government sent out the following wireless message—one of the many appeals to revolt that were continuously going out:

"The Revolutionary sailors of the Baltic Fleet, in conference assembled, send their greetings of brotherhood to their heroic German comrades who have taken part in the insurrection at Kiel.

"The Russian sailors are in complete possession of their battleships. The Sailors' Committee are the High Command. The yacht of the former Czar, the 'Polar Star,' is now the headquarters of the Fleet Committee, which is composed of common sailors, one from each ship.

"Since the Revolution, the Russian Fleet is as busy as formerly, but the Russian sailors will not use the fleet to fight their brothers but everywhere to fight under the Red Flag of the International for the freedom of the proletariat throughout the entire world."

With the words, "Flower and pride of the revolutionary forces," Trotzky had hailed the sailors of Kronstadt as they stood in July before the Tauride Palace, 6000 strong, demanding "All Power to the Soviet!" These were words, not of flattery, but of fact; for the Russian sailors were first to hoist upon their battleships the red flag of revolt, just as the German sailors are now the first to fly the red emblem of the Revolution. Through all the days of counter-revolution they were the first to sense danger to the new democracy. They have always been first to drop everything and hurry to its rescue.

They had no love for the Kerensky Government; yet when it was threatened, by the thousand they came pouring out of their ships and island citadel to line up against the wild divisions of Kornilov. When the cadets rose against the Bolsheviks and took possession of one of the nerve-centers of Petrograd—the telephone station—it was the sailors who headed the storming party that rushed the courtyard entrance and dug the cadets from their nest. When Petrograd was threatened with being cut off from food, and the November revolution with being starved into submission, the sailors were dispersed throughout the countryside as far afield as Siberia. With argument and bayonet they started the flow of food into the revolutionary capital. When the unity of Russia was threatened by Ukrainia and the counter-revolutionists on the Don, it was the sailors pouring down from the Baltic fleet on the North and up from the Black Sea fleet in the South who put fear into the hearts of the separatists.

The reason why the revolution is so precious to the sailor is that to him it means deliverance from the nightmare of a past the very thought of whose return is intolerable. The Russian naval officers were recruited exclusively from the privileged caste. The count against them is that they enforced, not a rigid discipline, but one that was arbitrary and personal. The weal of the sailor might be subject to the whims, jealousies, and insane rage of a petty officer whom he despised. His replies to his superior were limited to the three phases: tak tochno (quite so), nekak niet (no indeed), rad staratsa (glad to try my best), with of course the natural salutation, "Your Nobility!" In four years 404 seamen were sent to disciplinary battalions, 79 to military prisons, 322 to civil prisons, 1235 to penitentiaries, 431 to Katerga (hard labor in Siberia) and 56 were executed.

For this reason the outbreak of the revolution meant the killing of scores of officers, the dismissal of hundreds of others, and a sharp watch over all the rest. * * *

In no country is it possible to confuse the sailor with the landsman. The unmistakable stamp of the open sea is in his bearing and in his blood is the tang of the salt-sea winds. But the Russian sailor has something which marks him off even from his own kind throughout the world. In his heart there blazes the revolutionary fire. As flaming apostles of Socialism the men from the fleet passed along the highways and through the market-places of Russia; even in the remotest villages the sluggish-souled peasant felt the quickening touch of these missioners of revolt. They were ubiquitous, and zealous in every meeting and every plot. But these sailors who have so keenly set out for the democratization of Russia—how well have they democratized their own section of it? They who have so confidently challenged the whole world order—what sort of order have they set up in their own homes?

Home to the 1500 sailors of the Siberian fleet was Vladivostok. To the 10,000 men in the landlocked fleet of the Caspian it was Baku. The 8000 sailors of the Ice fleet guarding the White Sea found their refuge in Archangel. The two main fleets—the Black Sea, leading the revolt of 1905, and the Baltic, claiming the honors for 1917—had respectively a personnel of 45,000 and 65,000 men. These sailors from their far-reaching campaigns of propaganda and civil war come homing back to Sebastopol and Odessa in the Black Sea and to Reval, Kronstadt and Helsingfors on the Baltic.

My first glimpse of the sailor at home was in the Gulf of Finland, where the Baltic fleet stood

(Continued on Page .10.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Dec. 23, 1918. The meeting came to order at 7 p. m., E. A. Erickson presiding. Secretary reported shipping medium.

Headquarters, San Francisco, Cal., Dec. 30, 1918.

A synopsis of the minutes of the above date will be published in next issue.

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., Dec. 23, 1918.

No meeting. Shipping slow; men scarce.

Room 11, de Cosmos Block, 1424 Government Street.

Vancouver, B. C., Dec. 23, 1918.

Shipping fair.

W. G. MILLARD, Agent.

58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, Dec. 23, 1918.

No meeting. Shipping and prospects fair.

H. L. PETTERSON, Agent.

2016 North 30th St. Tel. Main 808.

Seattle Agency, Dec. 23, 1918.

Shipping dull.

P. B. GILL, Agent.

84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, Dec. 23, 1918.

Shipping slack; few members around.

ED. ROSENBERG, Agent.

P. O. Box 280. Tel. Main 557.

Portland Agency, Dec. 23, 1918.

Shipping good; prospects good.

JACK ROSEN, Agent.

88½ Third Street. Tel. Main 6013.

San Pedro Agency, Dec. 23, 1918.

Shipping good; members scarce.

HARRY OHLSON, Agent.

128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, Dec. 16, 1918.

Shipping poor; prospects poor.

JACK EDWARDSON, Agent.

P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Dec. 26, 1918. Regular meeting of the Marine Cooks and Stewards was called to order at 7 p. m., Eugene Burke in the chair. Secretary reported shipping medium; plenty of members ashore. Quarterly Finance Committee was elected to serve.

EUGENE STEIDLE, Secretary.

42 Market Street. Phone Kearny 5955.

Seattle Agency, Dec. 19, 1918.

Shipping medium.

LEONARD NORKGAUER, Agent.

Grand Trunk Dock. Rooms 203, P. O. Box 214. Phone Main 2233.

San Pedro Agency, Dec. 19, 1918.

Shipping fair; few members ashore.

HARRY POTHOFF, Agent.

Sepulveda Bldg., 128½ 6th St. Phone Home 115; Sunset 66W.

DIED.

Peter A. Larsen, No. 1271, a native of Denmark. Died at Oakland, Cal., Dec. 23, 1918.

Carl Larsson, No. 55, a native of Sweden, age 42. Died at San Francisco, Cal., Dec. 26, 1918.

An agency for the McIntosh & Seymour maritime Diesel engine has been established at San Francisco. This is the straight Diesel engine and an effort will be made to have it adopted by one or more vessels on this coast in order to demonstrate its merits. At present a number of modified types have been introduced and in many instances have rendered satisfaction. This has been the case with the "City of Portland" of the McCormick Company and others. It is said that plans are now maturing to place at least one set of engines of the McIntosh type on one of the coast boats.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Out of the first 180 local unions affiliated with the Chicago Federation of Labor to take a referendum vote upon the establishment of the Independent Labor Party with a complete and permanent precinct organization, and supporting "Labor's Fourteen Points" as its platform, only eight or nine have failed to give it their approval. That is the word brought here by Secretary Ed. Nockels, who is one of the prime movers in the plan. A similar referendum is now being taken by the Illinois State Federation of Labor among all its affiliated locals and central bodies, since the convention of the State Federation voted unanimously to organize the political movement throughout the entire State.

"If we have guessed right as to what the membership will do," said Nockels, "we shall win the spring campaign for control of the municipal government of Chicago. If we have guessed wrong, then we who started this movement have lost our heads. The organized labor movement of Chicago has enough votes to win whenever it gets ready to cast them for its own candidates. We have proposed a program—a platform. We have asked the membership to stand together for that program. If they do, as we believe they will, then our judgment will have been endorsed. We thought the membership of the unions were ready to act. The referendum thus far seems to show we were right."

Among the other big industrial centers that have followed the lead of Chicago in this regard, Detroit may now be counted. Its central labor body has endorsed the plan "in principle," and has ordered that a program be drafted and submitted for discussion. There are unofficial reports that similar action has been voted in a number of Middle Western cities during the past week, while the workers in the Eastern region where most of the war industries were located seem to be awaiting only the last hours of the National War Labor Board to join the political movement.

That the country is about to witness a tremendous increase in the self-determination of labor, politically as well as industrially, and that all the old landmarks of labor's power will be left behind, was the warning delivered to a meeting of nearly a hundred public officials, labor officials, and moderate liberals of various sorts, yesterday, by Charles Edward Russell of the American Alliance for Labor and Democracy. The occasion was the fortnightly lunch of the National Popular Government League, which is calling a big Reconstruction Conference of the liberal forces, to be held here January 9 to 11. Russell was invited to tell what he thought would have to be done toward reconstruction in America.

"Congress is trusting to luck," said Russell. "England is not. In England and in France and Italy they are working hard on these problems of demobilization. They know that it will be mighty dangerous to try to 'muddle through.' Congress ought to know that it is dangerous to try to 'muddle through' the turning of three or four millions of soldiers back into civil life without a definite plan to safeguard them against unemployment. Our situation is not so serious as England's, but believe me it will be serious enough before we are through.

"England has agreed to keep every soldier upon the nation's payroll until a suitable job is found for him. England has discovered that her working people are not going to agree to any reduction in the standard of living that they have reached during the war. Men in some of the trades have been making dollars where they used to earn shillings. They have learned to live better than they ever dreamed of living before the war. Their children are getting better food, better clothes, some are even getting music lessons, and there are thousands of pianos today in the homes of British wage-workers—a thing unheard of before 1914.

"At the same time, the jobs of the millions of soldiers have been taken. More than a million and a quarter of women have gone into industries where no women were employed before the war. Women now vote in Britain, and they cannot be put out of their jobs by a wave of the hand. Industry must be reorganized on a basis which will permit the returned soldiers, and the workers who have been employed in the industries during the war, all to be taken care of. The government has got to see that that is done.

"But the manufacturers in England are declaring that unless the wages come down, unless the workers will go back to the lower standard of living that prevailed before the war, British industries cannot live. They say they cannot produce goods to compete in the world market if they pay wages that will maintain the new standard of living.

"Well, I promise you that labor will challenge that proposition in England, and it will challenge it here at home. My friends, labor has understood the one great revelation of this world war—the supreme revelation which will influence the whole future of mankind—that back of all armies and fleets, back of all battles, back of all governments, back of human society in all its expressions of power, is the man lying on his back in the coal mine, digging with his pick the fuel that makes possible the machinery upon which our civilization rests. It is labor that has power over production, and power over all human affairs. Labor in Britain knows its power, and it is organized to-day to assert its power.

"I sat on the platform at the recent British Trade Union Congress at Derby, and I saw and heard there evidence enough to convince any one that the British workers are not satisfied to take second place any longer. They refuse forever more to concede that those who do the work of the world are less entitled to rule than those who are parasites.

"The present election over there is of no significance—it is just part of the machinery of war. But within eighteen months there will take place in Britain the most important election ever held in the islands, and I predict that the British Labor Party will sweep the country from end to end. A spokesman of labor will be the next Premier. A former hod carrier may then be made Chancellor, and perhaps a carpenter the first Lord of the Admiralty. Within two years from to-day the great change—the social revolution which is to abolish the power of the parasite class—will be quietly but irresistibly under way in England.

"I warn you of this coming change, because it will profoundly influence your own affairs. We have heard a great deal about Bolshevism. Most people think that it is a mental disease that affects only Russians. I tell you that Bolshevism is revolt against social injustice, and it is everywhere. It is growing rapidly in many countries. The effective remedy for Bolshevism is the removal of the injustice from which it springs. England will have no violent revolution because she will submit to revolution at the ballot box. But social injustice—the wrongs of the workers, which now the workers are strong enough to correct—is to be swept away. Do not think for one minute that the United States is to muddle through without meeting the same issue."

Russell explained that the Returned Soldiers' Association in Great Britain, which has enrolled over 90 per cent. of the veterans upon their reaching home, has joined forces with the Labor Party, and that this combinaton has at least 75 per cent. of the votes in the country. It did not get ready for the election of last week, but it will be more than ready for the campaign which will be waged after about a year from the signing of the peace treaty.

What Russell says about the British labor situation seems to be confirmed by this, from an editorial in to-day's New York World:

"Bolshevism cannot be checked by impassioned harangues about the sacredness of property. Millions of men have been engaged for four years in destroying both life and property under orders from their governments, and they are no longer impressed with the sacredness of either. No government anywhere has as yet presented a reconstruction program that makes any real appeal to them. The one definite thing that they understand is that food is scarce and that some people are much better off than others. . . . The problem belongs to no country. In the broadest sense it is universal, and is making itself the common issue of the war."

The World hints that the diplomats at the peace conference who fail to meet the demand of the masses for industrial democracy will be tragically surprised at events that will follow.

* * *

Do our American employers see this thing coming?

The New York Tugboat Exchange gives out a statement defying the War Labor Board, and saying: "Washington is infected from top to bottom with the eight-hour heresy."

So it is, and so it will remain. More than that, the labor officials in Washington are inclining steadily toward public ownership and operation of some of the chief industries. Yet they are eminently conservative, judged by European standards. And our soldiers have not yet got a job apiece.

The union label is a potent weapon for today's struggles. In addition it is a power for good to the rising generation, for their interests, their rights and their liberties go with its tenets. It stands for the well-being and progress of all. It aspires to unity and federation. It gives energy and impetus to work, for it is ennobling, full of the highest conceptions of duty.

PUSHED OFF THE EARTH.

The time will inevitably come when the earth will be full to overflowing.

Six centuries more, so the statisticians calculate, and there will be only one acre of land for every dweller on the earth. And the time will come, we are told, when there will be only one square yard for each person (says a writer in Tit-Bits).

At present there are, as nearly as can be estimated, 1,623,000,000 people living on the earth. As the land area is 52,333,000 square miles, there are, on the average, more than twenty acres for each person.

Of every 1000 persons living there are 555 in Asia, 245 in Europe, 100 in Africa, ninety-five in America, and five in Oceania. Thus more than half the world's population are Asiatic and nearly a quarter European, while one-tenth live in Africa and nearly as many in America.

But at present the population is very unevenly distributed. Thus in Asia, which has nearly one-third of the earth's land surface, there is one inhabitant to every thirteen acres; in Europe, which contains only one-fourteenth of the whole area, there is one to every seven acres; in Africa, one to forty-four; and in America, one to seventy-eight; while on the entire earth there are only thirty-one persons to each square mile.

Before the war Belgium was the most thickly populated country on the earth, with 658 inhabitants to each square mile, or more than one to each acre. A good second was Holland, with 407 persons for each square mile.

In the United Kingdom and Germany the numbers are respectively 374 and 311; and Japan makes a good show with 356 to each square mile. In China, with its 400,000,000 people, there are ninety-nine to every square mile; and in India 158. For every square mile of Peru there are only five inhabitants; Venezuela has only six, Argentina seven, New Zealand eleven, and South Africa thirteen.

In Canada's 3,730,000 square miles there is room for the entire world's population, allowing nearly one and a half acres for each person. If Canada were only as thickly populated as the British Isles it could accommodate 1,356,000,000, roughly four out of five persons living on the earth to-day. At present its population is only 7,250,000, or less than two persons to each square mile.

Australia to-day has only approximately five inhabitants for every three square miles. If it were as thickly populated as the United Kingdom it would provide room for 1,150,000,000. Similarly, South Africa has accommodation and to spare for 170,000,000 more inhabitants, or more than four times the population of France.

In spite of the ravages of war and disease the day will inevitably arrive when the earth will be uncomfortably crowded. It is calculated that the earth's population is doubled in 139 years. As a matter of fact, the population of the United Kingdom doubles every eighty years, and that of England and Wales every fifty-seven years. Taking the world period of 139 years, a simple calculation will show that by A. D. 2517 there will be as many people in the world as there are acres. That is, the world's population will have grown to 33,482,000,000.

By this time—that is, 600 years hence—our little globe will certainly be quite "full up," so far as comfort and the means of living are concerned. What will happen then, or later, who shall say? For if the population continues to grow at the same rate, the time will arrive when there will be as many people as there are, not acres, but square yards on the earth's surface—when, in fact, there will be comfortable standing room only.

And that day will arrive somewhere about the year 4000, when probably even the present world war will be only a vague legend.

THE MEANING OF "MARU."

Japanese and Chinese scholars never weary of discussing the origin of the suffix "Maru," which is attached to the name of every Japanese vessel. Aru Nyhoujin, of Hankow, says that the word was first used in this way in the case of the "Nippon Maru," flagship of the transports during the Korean Expedition of Taicoon Hideyoshi in the sixteenth century. Japan had then been engaged in feudal warfare for two hundred years, and the leader, after his unification of the empire, sought an outlet for the fighting spirit of his adventurers in this foreign expedition. A flag to represent the United Army of Daimyos, corresponding to our modern National ensign, was needed; and for the first time in the history of Japan a white flag with a round spot of red in its center to portray the rising sun (literal meaning of Nippon) was hoisted over the squadron's flagship, which was named by the Taicoon himself "Nippon Maru," the suffix "perhaps representing the flag." The use of the word from that time became a maritime custom.

Makao San, of Hankow, believes that the word was derived from "mairu," which means "going and returning" to a temple, and so signifies "round."

An American thinks it means "precious."

Anyway, the maritime code of Japan especially provides that the name of a vessel shall bear the suffix "maru," and its meaning, as applied to merchant craft to-day, may be considered to be "ship."

COST OF A MODERN "U" BOAT.

Although actual figures, for obvious reasons, are not available, one would be underestimating rather than overestimating the cost of the German submarine U-29, which the British Admiralty reported to have sunk, at £200,000, says the London Times. This total is based on the fact that, according to a certain official publication, the E-4 of our submarine fleet, which was completed in 1913, cost £107,791, and the E class is neither the largest nor the most expensive type of submarine in the fleet today. According to the Admiralty statement, the cost of the "hull, fittings and equipment" of the E-4 was £26,787, £79,105 being spent on her propelling and other machinery. In addition to this outlay there was an item of £1899 for "incidental charges," which relate to the proportionate costs incurred while the vessel was in the hands of the dockyard authorities being finished.

"A great victory," said the Duke of Wellington, "is the most awful thing in the world except a great defeat."—From Abbot's "Life of Napoleon."

CUNARD LINE'S HEAVY LOSS.

It is reported that no less than fifteen steamships, aggregating 206,769 gross tons, were lost by the Cunard Line during the war. All except two were sunk by torpedoes or mines. The "Campania" and the "Ascania" were lost through accidents. The tonnage sunk represents approximately one-half of that possessed by the line at the outbreak of the war. Nearly all of the Cunard liners were well-known Atlantic greyhounds, the largest of which was the "Lusitania."

The Anchor Line, a subsidiary of the Cunard, lost eight ships, including the 14,340-ton "Tuscania." The total tonnage loss of the Anchor Line was 65,488. A list of the ships lost, with their tonnage, follows:

Cunard Line: "Lusitania," 30,396; "Franconia," 18,150; "Laconia," 18,099; "Transylvania," 14,500; "Ivernia," 14,278; "Carpathia," 13,603; "Alaunia," 13,405; "Aurania," 13,936; "Campania," 12,950; "Royal Edward," 11,117; "Ultonia," 10,402; "Ascania," 9121; "Ansonia," 8153; "Feltria," 5254.

Anchor Line: "Tuscania," 14,340; "Cameronia," 10,963; "Caledonia," 9223; "Athenia," 8668; "California," 8662; "Tiberia," 4880; "Perugia," 4376; "Assyria," 4476.

It will not help a man to drive off one robber if another, still stronger and more rapacious, is left to plunder him.—Henry George.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.
2. Free schools, free text books and compulsory education.
3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.
4. A work day of not more than eight hours in the twenty-four hour day.
5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.
6. Release from employment one day in seven.
7. The abolition of the contract system on public work.
8. The municipal ownership of public utilities.
9. The abolition of the sweat-shop system.
10. Sanitary inspection of factory, workshop, mine and home.
11. Liability of employers for injury to body or loss of life.
12. The nationalization of telegraph and telephone.
13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.
14. Woman suffrage co-equal with man-suffrage.
15. Suitable and plentiful playgrounds for children in all cities.
16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.
17. Continued agitation for the public bath system in all cities.
18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.
19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

THE RED FLEET OF RUSSIA.

(Continued from Page 7.)

as a barricade on the water-road to Petrograd. An old reserve officer directing me along the quay pointed out a strip of yellow wood which ran around the "Polar Star," the yacht of the former Czar, and said:

"That moulding is of best mahogany, and cost 25,000 rubles, but the sailors are now too lazy to keep it polished. So they painted it yellow. In any day a sailor was a sailor. He knew that his job was to scrub and polish and he tended to his job. But the devil is loose among them now. Think of it! On this very yacht that belonged to the Czar himself ordinary seamen sit about making laws about managing the ships and the fleet and the country. And they don't stop there. They talk about managing the world. Internationalism and democracy they call it, but I call it downright treason and insanity."

There in brief is the point at issue between the defenders of the old régime and the champions of the new revolutionary order. In the old order the discipline and control were superimposed from above; in the new they proceed from the men themselves. The old was a fleet of officers; the new is a fleet of sailors. In the change a new set of values has been created; a new code has been formed. In it the polishing of the sailors' wits upon democracy and internationalism has higher rating than polishing the brass and mahogany.

The second indication of the temper of the new fleet came to us as we climbed the gangway of the "Polar Star," where Rasputin and his associates once had their day. The correspondent of the San Francisco Bulletin, Miss Beatty, was informed that the presence of her sex upon the ships was tabooed. The captain was very polite, very much adorned with gold braid, but withal very helpless.

"In such a matter, you understand," he explained, "I can do nothing at all. Everything is in the hands of the 'committee.'"

"But she has come 10,000 versts to see the fleet."

"Well, we can see what the 'committee' says," he answered. "The 'committee' was complaisant and made a special dispensation in the matter. We were on our way again, with the captain in advance warding off the challenging inquiries of the crew with the explanation "by special permission from the 'committee.'"

But the word captain is an anachronism. Rule 2 of the Decree for the Democratization of the Fleet reads: "All denominations of ranks existing up till now which serve to show class distinctions are abolished and all are to be called Seamen of the War Fleet of the Russian Republic."

Furthermore, "All giving of titles is to be abolished and all men are to bear the name of their calling in accordance with the special function that they fulfil; for example, grazhdanin kommander (citizen commander). In like manner it is 'citizen artillerist,' 'citizen electro-technician,' etc." But captain is not the only anachronism. His gold braid is an anachronism likewise, for on the new uniform common to all seamen the trappings and tinsel are at a minimum.

The citizen commander pointed down the corridor past the princesses' suits to the great cabin from whose precincts he said that he was debarred. It was consecrated to the meetings of the Central Committee of the Baltic Sea fleet, or, as it is more familiarly known, the Centrobalt. It consisted of one representative for every contingent of 1000 sailors, making a committee of about 65. This Central Committee is divided into four general departments.

The Administrative Committee deals with questions about the make-up of the fleet, the construction of new ships, and the conditions in the factories where these ships are made. It determines the personnel of the crews, the transfer of sailors from one ship to another, the rate of pay, mobilization, and demobilization.

The Supply Committee looks after the provisioning of the fleet with food, coal, oil and medicines. It looks after the finances of the fleet, accepting the new ships that are built and paying for them.

The Political Committee conducts a propaganda by sending to the front, to the barracks, and throughout the countryside, men with papers, books and speeches. The rules provide that all seamen are free to become members of any political, national, religious, economic or professional organizations, societies, or unions. They have the right to preach freely and openly, verbally, by writing, or in print, their political, religious, or other views. The juridical section of this committee examines into scandals and conflicts between sailors and commanders. The inquest section makes inquiries into bad ships, counter-revolutionary activities, and like matters.

The War Marine Department (Voyenno-Morskoy-Otdiel) is the executive head of the fleet. It consists of a commander and two assistants, one managing the operative and the other the technical side. In all operative and technical affairs the War Marine Department is of supreme authority. All the orders to the fleet, to the smaller units, and to the individual ships are given under the signature of the chief and countersigned by a member of the department attached to his service. In matters of navigation and technique this commanding staff is in complete control over the whole organization both in and out of battle. It holds command over the drilling; and fixes the time for the sailing of the ships. Having such a large measure of authority, it is responsible for its actions before the plenum of the Central Committee and the higher organs of state. In all orders and dispositions regarding the technical and operative side of the fleet the chief of this department must assume full responsibility for results. As for the work executed in conjunction with the Central Committee on economic, administrative, or political affairs, the chief is responsible only when the resolution of the Central Committee is in conformity with his own report. If the resolution passed by the Central Committee is opposed to the views announced by the chief on the subject, he is freed from all responsibility as to the results of its execution. * * *

Feodor Averichkin, secretary of the Central Committee, escorted me on the pilot-boat to his battleship, the "Respublika." The entire crew was assembled on deck to give cheers and to hear the news from the first foreign tovarishch (comrade). The declaration that he was an American Internationalist put him immediately at one with 960 out of 1020 members of the crew. The officer Zazloki translated, but a speech was not necessary. The phraseology of the new revolutionary ideology has entirely displaced the old patriotic and religious ideology in Russia. The mere reiteration of the new battle cries has power to charm and inspirit these new disciples of revolt. The sounding of them in my foreign accent drew such an outburst of applause that it echoed like a slavo from all the ship's batteries. A testimonial was inscribed with an array of seals and signatures in the characteristic Russian manner.

The photographer was called upon to make a record of this historic event—the American and the Russian Internationalist shaking hands on the bridge of the battleship "Respublika" off the coast of Finland. It was done amidst great acclamation from the crew.

In all this the commander and his staff hung on the edge of the crowd as if they were outsiders or outcasts. I pointed this out to Averichkin and suggested that it savored of humiliation. He averred that the proceedings were quite in accord with regulation No. 37, which provided that the commanding staff be debarred from all affairs which were of state or international significance.

"But isn't your commander a good fellow?" I asked. "He looks that way to me."

"Why, yes," Averichkin replied. "Even before the revolution he was a good fellow and now he is one of the best in the world. So if you want him in the picture, all right."

The captain smiled and took his place in the picture amidst much applause from the crew. After this love feast we retired to the ship committees' quarters where I was plied with innumerable questions about the American navy ranging from "Do the American navy officers reflect solely the viewpoint of the upper classes?" to "Are the American battleships kept as clean as this one of ours?" As we talked, eggs and steak were brought to me, while a great plate of potatoes was served each member of the committee. I commented upon the difference.

"Yours is officers' fare and ours is sailors'," they explained.

"Pochemoo, revolutsia?" (Why, after the revolution?) I exclaimed.

They laughed and said, "The revolution has given us the thing that we value most—our freedom. We are masters of our own ship. We are masters of our own lives. We have our own courts. We can have shore-leave when not in service. Off duty we have the right to wear civilian clothes. We do not demand that the revolution should give us everything. Afterwards, however, these men became a bit more ambitious gastronomically, though on account of the shortage of food the democratization of the ration was accomplished more by sabotage on the officers' ration than by levelling up that of the sailors.

The crew not only elects its own committee—generally on the basis of one member for every fifty sailors—but likewise chooses all its officers. For the position of commander the list of the candidates is drawn up by the ship's committee together with the flagman. For the position of assistant commander the list is made up by the committee in consultation with the commander. The balloting then proceeds on the basis of general suffrage and the election is valid if two-thirds of the crew participate.

Each group of specialized workers elects its own head. The electro-technicians elect one of their number as chief. The divers elect one of their number as chief of their guild. The list of the candidates is made up by the men in consultation with the commander. The crew is informed of the results of the elections. If during seven days no protest is raised upon the part of the crew against any elected person he is regarded as confirmed in his position by the personnel of the ship.

Every seaman has the right to refuse the post to which he has been elected, provided he gives the motive for his refusal. The final decision as to the acceptance or rejection of this refusal is left to the Central Committee of the fleet, to whom must be submitted a detailed record of the case.

There are three tendencies in the present democratization of the fleet: (1) The formation of specialized groups like divers, and mechanics into corporations or guilds. This action exhibits a syndicalist viewpoint. In the medical force the professional union of physicians and feldshers (assistant surgeons) presents its candidates to the different ships. They are then confirmed in their position by the different crews, and the results of the election are communicated to the Central Committee.

(2) The concentration of much power in the executive heads. This begins with the chief of the War-Marine Department, and runs down through the commanders of divisions, flotillas, divisions of ships of the second, third and fourth rank, airship, coast defense, hydrographical expeditions, etc.

(3) A wide provision for the use of the recall in the individual ships and in the fleet at large. One-third of the members of the crew may raise the question against any one in authority. It is the same in a specialized group. If, for example, the electro-technicians are dissatisfied with their chief, one-third of their number can raise the question of his recall. If two-thirds of the contingent vote for the recall it is directed by the ship's committee, together with a report of the chief of the unit to the Central Committee for final confirmation of the decision.

As there are fleets on the different seas and rivers, the next body above the central committees of the different fleets is the All-Russian Convention of Fleets. They elected first of all a Marine Council of twenty members, which exercises a general supervision over the building of new ships, the inspection of wharves and barracks, and the new courses in the naval colleges. The most important function of this Marine Council is to sit as a part of the great central governing body of Russia—the Soviet of Workmen's, Soldiers' and Peasants' Deputies in Moscow.

The second superior body elected by this All-Russian Convention of Fleets is the Supreme Marine College of three. The chief of this is ex-officio a member of the Council of People's Commissaires. The sailor Dybenko was the first to hold that office. The second member of the Supreme Marine College was Modest Ivanov under whose direction were the departments of the Naval Ministry in the great Admiralty Building in Petrograd. * * *

How has all this affected the efficiency of the fleet? Many experts will testify that they find in the fleet the inevitable effects of the destruction of the old discipline—a considerable lowering of its technical efficiency. Others assert that after going through three years of war and two revolutions the fleet was in as good condition as any in the world. This seems a partisan view. As to its moral efficiency, there is no doubt that it was superb. The battle of the Moon Sound Isles furnished a good test case. Outnumbered by the German squadron and outdistanced both in speed and gun range, these revolutionary sailors fought a brilliant engagement with the enemy. Even their worst detractors have admitted that the fighting morale of the fleet was unsurpassed. The fervor of the sailors would probably have assured the success of the experiment in democratization if the officers instead of "sabotaging" had given enthusiastic support to the undertaking. But they are tragically fettered by the habits of their class and by the ingrained prejudices of their tradition.

To insure success, behind the democratic machinery there must be the enthusiastic democratic spirit. The sailors, realizing this, have made ready for the training of their commanders out of the ranks of the workers. They founded a university in which hundreds of sailors were taking courses ranging from the most elementary to the most advanced. In the meeting of the Educational Committee, when they were organizing their curriculum, I blunderingly asked the chairman from what school or university he came. He blushed and hesitated, then said: "No university; no school. I am almost one of the dark people. But I am a revolutionist. We know that our greatest enemy is ignorance, and we are going to begin right now to kill that foe." By his ardency he persuaded several members of the University of Helsingfors, many officers, and several co-operating scientific and educational societies to join in this work. While the regulations demand that "all persons appointed to commanding posts must have corresponding training, theoretical and practical, attested by certificate from special schools," in the present exigencies seamen who are particularly skilled and who can pass practical tests before the commission appointed by the Central Committee are allowed to hold certain posts. The Sailors' University provides a shortened theoretical education for them.

The world-wide rise of the working-class forcing a new social reorganization is based not solely upon the demand for the necessities of life but on the claim for a larger participation in some of its amenities. Coming down the main street of Helsingfors one night I was commenting upon the absence in this port town of the usual bands of sailors rolling down the street. Suddenly we were brought sharply up before an imposing building which had the dimensions and appearance of a great modern hotel. The door opened, and we heard strains of music. Entering, we went along a richly carpeted stairway and through curtained doorways until we came to the dining hall. There, in a room set with potted plants and mirrors, with hundreds of lights shining upon the glistening

napery and silver, were the diners, listening to the orchestra playing Chopin and Tchaikovsky interspersed with an occasional ragtime piece from the American conductor. It was not the usual hotel assemblage of adventurers, speculators, bankers, and politicians, with their retainers and their women, but the seamen of the war fleet of the Russian Republic. The game and smoking rooms were crowded, while through the halls and corridors streamed a procession of laughing, jesting, arguing sailors in their suits of blue.

The hotel bore in big letters the sign Matrosski Kloob (Sailors' Club). When it was opened ten thousand sailors immediately joined, paying their dues of two marks a month and organizing their club on the usual Russian Soviet plan. Every fifty members of the club chose one delegate. That made about 200 members in the central committee, from which was chosen the presidium of twelve. Eighty-five per cent. of the sailors are literate—a proportion surprisingly high among the Russian proletariat. The club accordingly boasted a much-used magazine room, the nucleus of a library, and an excellent illustrated weekly journal, Moryak (The Seaman). The motto of the organization was: "A welcome to all the sailors of the world."

After hoisting the red flag of revolt one of the first acts of the revolutionary fleet was to abolish all outward signs of the hated old régime. Those ships which carried in their names reminders of the old autocracy were rechristened and came forth from their baptism of paint with names fitting the new republican order. By this ceremony the "Emperor Alexander II" became the "Dawn of Liberty" (Zaria Svobody); the "Czerevitch" became the "Citizen" (Grazhdanin); the "Emperor Paul the First" became the "Republic" (Respublika). Such changes were easy to make, but they were not merely superficial. They are symbolic of a change in reality. They are the outward and visible signs of an inward and spiritual fact—the democratization of a great fleet. Many changes in the technique have been and will be made, but it will always be a democratic fleet. Just as the fervid revolutionary spirit of the seamen made this democratization and consequent socialization possible, so is this socialization in its turn reacting upon the psychology of the seamen. They have a deep feeling of communal ownership. When the ship's boat carried me away from the "Respublika," Averichkin with a gesture that took in all the gray ships riding at anchor in the bay, and with a gleam of pride in his eye, exclaimed: "Our fleet! Our fleet! And we shall make it the best fleet in the world. It will always be ready to fight for liberty and justice;" and then, as if looking out beyond the gray mists which hung above the bay and beyond the red mists of the world war, he added, "until we make the international revolution and the end of wars."—Albert Rhys Williams in the New York "Nation."

WEEKLY NEWS LETTER

mitting the properties to remain under private control.

Postal Chief Holds Fast.

In his annual report to Congress Postmaster-General Burleson reaffirms his opposition to unions in the postal service as expressed in his report last year.

The Postmaster-General says:

"The views of this department on organizations of postal employees were fully set forth in the last annual report of the Postmaster-General. Nothing has transpired during the past year to change the views."

Last year's views, which the Postmaster-General indorses, are:

"The conduct of these organizations at this time is incompatible with the principles of civil service and with good administration of the postal service. They are fast becoming a menace to public welfare, and should no longer be tolerated or condoned. It is earnestly recommended that the provision in the act of August 24, 1912 (giving employees the right to petition Congress and to affiliate with the A. F. of L.), be repealed."

Regarding this attitude of the Postmaster-General, Secretary-Treasurer Flaherty of the National Federation of Postal Employees said:

"The Postmaster-General is the one prominent man in public and private life who has refused to change his opinion during the past year. No other citizen can be found who will say that the unions of Government employees are a menace; but, like the boy in our school books, who stood on the burning deck, the postal chief stands alone."

Want Soldiers to Scab.

The Omaha and Council Bluffs Street Railway Company insists on democracy abroad but wants the soldiers who made this possible to scab on workers who are fighting for industrial freedom at home.

The company's motormen and conductors are on strike and the following advertisement was inserted in local newspapers by this corporation: "Wanted able-bodied men who can operate street cars for positions as conductors and motormen. Returning soldiers will be given preference. Wages 41 to 45 cents per hour and bonus of $5 per day during the present emergency. Steady positions. Apply at superintendent of transportation, Omaha and Council Bluffs Street Railway Company."

Schools Our Bulwark.

A committee appointed by the Illinois State Federation of Labor made this report on the importance of public schools to our national life:

"Upon the schools also will depend to a large measure the kind and degree of industrial democracy we shall be able to achieve, whether our children shall grow up to become mere adjuncts of machines, deadened by the daily grind, or shall have a vision of the industry as a whole, and be trained to play an intelligent part in it, and be able to feel something of the joy of making their individuality count in it, and in society as a whole.

"The schools must also conscientiously and intensively train for that most difficult of all human activities, self-government. One need only to look at the spectacle of misgoverned American cities to realize how lamentably we have failed in the past. We are failing largely because we are starving our schools financially, and almost ignoring them as communities. Surely one of the compensations for the sacrifices of this righteous war, must be a quickened sense of social values finding its most important outlet in an educational development establishing in America's schools, 'democracy in education; education for democracy.'"

Served United States Forty-three Years.

Mrs. Amanda E. Brown, connected with the United States Treasury for forty-three years as an expert in the redemption of mutilated money, died in Washington, aged 81 years.

To the world Mrs. Brown was unknown, but few individuals have gladdened the hearts of poor people as this woman, whose life work was the identification of destroyed currency, which was returned to them in the shape of new treasury notes.

Where homes were burned, the charred remnants of money were sent to the Treasury for possible identification. Much of the currency was mutilated beyond recognition, except to the eyes of this woman, who identified the denomination and other features.

At the time of her death Mrs. Brown was receiving the munificent wage of $1600 a year for expert knowledge possessed by no other person.

Labor News

In his annual report to Congress Public Printer Ford says the Government printing office is losing some of its most skilled employees who leave to get higher wages elsewhere. He recommends substantial salary increases and a retirement law.

Organized hotel maids of Seattle say that 75 per cent. of the hotels and rooming houses in that city are controlled by Japanese. In many cases the Japs paid large sums to secure leases and immediately boosted rents and ousted the white workers.

The convention of the Illinois State Federation of Labor indorsed the proposed independent labor party suggested by the Chicago Federation of Labor. The convention voted down a resolution against military training on the ground that the end of wars is not yet in sight.

The four Collinsville, Ill., unions of miners affiliated with the United Mine Workers have dedicated their new building, known as the Miners' Institute. It is three stories high, with every facility for union purposes, education, recreation and an auditorium that will accommodate the largest theatrical production. Over the entrance to the club room quarters are two life-size figures of miners and in the background is the seal of the United Mine Workers.

Social workers from all parts of the United States, gathered at New York recently to consider problems arising from demobilization of the nation's armed forces, adopted a resolution calling on the government "for avoidance of the evils of the pension system for our victorious troops and of preventable poverty among wage earners." Further extension "of the social insurance principle already adopted in soldiers' and sailors' insurance and in workmen's compensation laws" was suggested as a remedy.

Child Labor Day will be observed throughout the country on Saturday, January 25, in synagogues, on Sunday, January 26, in churches, and in the schools on the following Monday. These dates have been designated by the National Child Labor Committee, which announces that the day will be an occasion for reviewing the work and achievement of Children's Year. The Children's Bureau of the Department of Labor is arranging to have reports from its field workers available for the programs of churches, schools, clubs and other organizations.

That the next ten years will witness the greatest wave of prosperity the United States ever experienced, and that the next three or four months will witness a period of business depression owing to unsettled conditions, were the predictions of Professor Charles E. Zueblin of the United States Employment Service in an address before the Illinois Manufacturers' Cost Association. Professor Zueblin said that the problem of returning more than 3,000,000 American soldiers and sailors to their homes and industries could only be solved by capital and labor getting together on a basis of better production. "There will be no Bolsheviki movement in America," he added, "for the Bolsheviki cannot live with prosperity."

• • •

League President, Judge James M. Rea, Savannah, Mo.; Vice-Pres., Kenneth B. Elliman, Boston, Mass.; Treasurer, Herman Cohn, Seattle, Wash.; Secretary, W. E. Brokaw, Longbranch, Wash.

INFORMATION WANTED.

Members of the crew of the steamer "Brazos" who were on board when she picked up the S. S. "Iroquois" can obtain money due them for such salvage services by communicating with Silas B. Axtell, attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 7-31-18

A club within a club!

Existing clubs represent organizations already formed.

Why not propose, at the next meeting, that your club become a War Savings Society for the rest of the war?

Each member agreeing to buy at least one War Savings Stamp per month.

Besides the saving—

It becomes the popular thing to do with less; to make what you have last longer.

Incidentally, it gives the Government a better market wherein to purchase things for soldiers.

INFORMATION.

Members who were present at the time when W. Bodie met with an accident on board the S. S. "Eastern Sea," last July, are requested to communicate with the above named comrade, P. O. Box 65, Seattle, Wash. 11-6-18

Members of the crew of the S. S. "Fred W. Whellen" who were on board November 11, 1918, when she picked up the bark "Galica" should file their claims with this office and be joined in libel which is being filed by the undersigned on behalf of the members of the crew. Silas B. Axtell, 1 Broadway, New York City. 12-25-18

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

INFORMATION WANTED.

Anyone knowing the whereabouts of Daniel Shean, last heard from at Cleveland, will kindly communicate with his brother, Richard Shean, 7014 Cedar Ave., Cleveland, Ohio. 11-6-18

Members of the crew of the steam schooner "Florence Olsen" who signed articles at New York on September 15, 1918, for a voyage to Central America and return, and who were on board said schooner at the time she salved the steam schooner "Claremont" near the Tucker Islands, off the coast of Nicaragua, on October 31, 1918, and towed her into Christobal, will kindly communicate with Silas B. Axtell, 1 Broadway, New York City. 12-25-18

The offices of Attorney I. A. Rabinow, 277 Broadway, New York City, are open to seamen in such as Compensation, Salvage or Maritime accident cases. Legal service rendered, free of charge, in nature of consultation and advice. (Advt.)

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

Hans Meyer, member of the Sailors' Union of the Pacific, who was last seen in Honolulu, T. H., on Feb. 17, 1914, is inquired for. Any one knowing his whereabouts, please notify Henry Capell, 51 South St., New York, N. Y.—5-29-18.

Home News

It is estimated that the value of the personality of the residents of Greater New York is at least eight times the value of their real property. In other words, there is $8,500,000,000 of real estate and at least $60,000,000,000 of personal property.

The Ohio State Cossack agitation has struck Ohio and friends of this strikebreaking institution are trying to win support in the farming communities by showing that the State Cossacks will make crime in the rural sections as scarce as palm trees in the frozen North.

All requisitions of the United States Fuel Administration for the shipment of bituminous coal to individual plants have been canceled. The Administration recently announced that its policy in the future would be to leave to the plants themselves the work of obtaining fuel, which it is believed can be accomplished without difficulty.

The annual report of the United States Commissioner of Internal Revenue Roper shows that during the last fiscal year 2,319,929 persons reported incomes of $3,000 and less, which netted a revenue of $22,395,262.40, or a little less than $10 each. On the other hand 665,000 individuals with incomes of more than $3,000 were assessed $592,613,000, or approximately $900 each.

Federal Judge Vaughan of Honolulu, Hawaii, has ruled that the United States Army Naturalization Act of May 9 last repeals naturalization section 2169, limiting naturalization rights to Caucasians and persons of African descent and permits naturalization of Chinese, Japanese and Koreans serving in the forces of the United States Army and Navy in the present war.

Complete data on public works construction projects in the different States have been asked for by the War Labor Policies Board by telegrams to all the governors. The question whether it will be necessary for the Federal Government to take in hand large projects of its own during the demobilization to find employment for unskilled labor not absorbed by private industry is to be discussed on the basis of these data at the annual conference of governors at Annapolis, Md.

Paul Chapman, the Brooklyn boy who was convicted for complicity in a murder last February and for whom there was no other legal sentence but that of death because he had just turned his sixteenth birthday at the time of the crime, is not to die after all. Governor Whitman has commuted his sentence to life imprisonment, saying that he did this solely because of the prisoner's youth. Many petitions have been received at the executive chambers requesting clemency.

First it was Independence, Pennsylvania. Then when the fame of the Iron Chancellor was at its height the German population of the little town voted pridefully to change its name to Bismarck. Bismarck it remained until this year, when citizens forgot for all time that they had once been German and pledged themselves to battle against the machine that Bismarck had built up. The Little town has a new name now. It is Quentin, Pennsylvania, in honor of that son of a former President who died fighting in France.

Domestic and Naval

A. E. Jardine, for several years head of the Atlantic City Transportation Co., which operated a line between Atlantic City and New York, is reported to be arranging for the formation of a new steamship line between Atlantic City, New York and Philadelphia.

J. J. Lafferty, a civilian machinist, was killed and three enlisted men of the Navy were severely burned by a flareback in the engine-room of the United States transport Bath at the Philadelphia Navy Yard. Of the injured, Frank P. McDermott, Pittsburg fireman, was the most seriously hurt.

In an address before the Boston Chamber of Commerce, Howard Coonley, Vice-President of the Emergency Fleet Corporation, stated that on November 1, 1917, the home office of the Corporation in Washington had 522 employees, and 545 representatives of the Corporation were in the field. Today there are approximately 7,500 employees and the annual payroll of the Corporation is about $12,000,000. When the Emergency Fleet program was launched there were 61 shipyards with 235 ways. Today there are 198 yards with 1,803 ways.

Vilhjalmur Stefansson, Arctic explorer, to whom the Charles P. Daly Medal has been presented by the American Geographical Society for his "valuable contributions to science," pleaded in an address that no efforts be made to civilize the Eskimo tribes of the Far North. All such previous efforts, he stated, had resulted disastrously for the natives. One tribe of 5,000, discovered in 1825 by an English explorer, he said, was now reduced to only forty persons through adoption of a civilized mode of living, which was unsuitable for the frigid clime.

"Concrete ships are a failure, and are likely to be a failure, because they are, and are likely to be, considerably heavier than steel ships," so says the Liverpool Journal of Commerce, which adds: "Can any of the advocates of this form of shipbuilding produce any substantial arguments which would justify anything more than experimental construction of reinforced concrete cargo carriers—and that on a very limited scale? Although with considerable regret, it must be admitted that all the evidence so far produced tends to the conclusion that no reputable shipowner would care to invest capital in a concrete ship. The proposition is not a paying one, and this is a damning disability."

The Swedish barque Svithiod, laden with a cargo of rubber, seized in the early days of the war and brought to Halifax, has been officially confiscated through a decision by Justice Drysdale, of the Admiralty Court. The judgment asserts that the captain of the ship acted in collusion with certain persons in Pernambuco, Brazil, in an attempt to smuggle the third officer of a German steamer interned there into Germany. The captain protested he did not know the German officer was on board, and it was held by the Court that the protest was false: this act, the justice said, was sufficient alone to justify the seizure of the vessel. It was recited further that the cargo of rubber was contraband and loaded without authority.

The Public
A Journal of Democracy
Poverty is A Crime!
It isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was
"The Crime of Poverty"
It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.
Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.
Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

INFORMATION WANTED.

Members of the crew of the S. S. "Macona," who signed Shipping Articles at New York about April 1st, 1917, are entitled to a share for salvaging the said ship when she was partly wrecked near Havre, France. Members of the crew of the said ship should file, with me, their claims for their share of the salvage money, which I am now trying to collect for other seamen.

News from Abroad

By systematic reforestation Java is constantly increasing its teak forests, which now cover more than 1,480,000 acres, despite the great amount of timber cut every year.

There are more than 6,000,000 Africans among the 17,000,000 people in Brazil, and many of them the crudest type of negro on the American hemisphere.

Because locusts are rich in nitrogen and phosphoric acid the government of Uruguay has appointed a commission to ascertain if the insects can not be utilized in fertilizers, soap and lubricants.

When a Speaker of the British House of Commons retires from office it is the established custom to grant him a peerage, together with a town house and pension of $20,000 a year for the rest of his life.

Russia's war casualties total 9,150,000 men, according to information received from Petrograd. Of this number 1,700,000 were killed. The disabled men number 1,460,000, while 3,500,000 other soldiers were wounded. The Russians taken prisoner total 2,500,000.

It is understood that a famous British shipbuilding firm has been informed by the Admiralty that it may now turn over for the adoption to new Atlantic liners of the Mauretania and Aquitania type, certain boilers and machinery, which had been ordered for large naval vessels. It is also understood that other British shipbuilding firms have been authorized to go ahead with the construction of ships on private account.

Danish papers publish a semi-official statement regarding the future policy of cooperation between Scandinavia and Denmark. It states that, as a result of the meetings of the Scandinavian Cabinet ministers and governments, the three northern countries have appointed committees to study measures for the protecting of neutral states' common interests at the peace negotiations and afterward. These committees have held a series of meetings at Copenhagen, and have agreed to a detailed proposal in favor of the organization of a League of Nations. The committees have provisionally discussed the questions of the northern states' attitude to the proposed international restrictions of armaments and the international enforcement thereof, and will further consider the matter.

The personnel of the big world peace congress gradually is taking form, so that the American delegates express the hope that the various countries' delegates will be announced and the delegates arrive for the actual commencement of the negotiations soon after the opening of the new year. A number of minor details of the composition of the congress are now fairly well settled, as a result of recent conferences. These indicate that the total membership of the congress will be between 100 and 120. Twenty-seven countries will be represented by delegations, including those which declared war and a number which have come into existence as a result of the war. The great powers, notably Great Britain, France, the United States and Italy, each have allotted five delegates, while the other delegations will vary from one to four members, according to the size of the country and the interests involved.

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

THE SEAMEN'S JOURNAL.

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 18. SAN FRANCISCO, WEDNESDAY, JANUARY 8, 1919. Whole No. 2520.

A DEFENSE OF THE SEAMEN'S ACT.

Senator Fletcher Challenges Those Responsible for Misrepresentation.

Addressing the United States Senate on recent attacks upon the Seamen's Act, Senator Fletcher, of Florida, minced no words in directing attention to certain fallacies upon American shipping problems.

In particular did the Senator devote his attention to the oft-repeated contention that "our navigation laws hamper and hinder ship operation under American registry."

The "Essentials of Sea Power" were also ably analyzed by Senator Fletcher, and the Journal takes pleasure in submitting herewith pertinent and interesting excerpts from his address which was delivered on December 26.

Of course, the first essential to a creditable sea power is ships flying our flag. I take it if we have learned anything from the war, now about over, it is the fact that we must have an American mercantile marine sufficient to carry at least a major per cent. of our foreign commerce.

The reasons need not be discussed. There is no need for argument. I assume there is practically unanimity of thought to that effect. There may be a difference of opinion as to how this is to be accomplished. Some contend that private enterprise should both build and operate the ships. Others contend that the Government should build and operate along with and not in a way to discourage private enterprise. Still others insist the Government should build, own, and operate the ocean-going boats engaged in foreign trade, flying our flag, without regard to individual or private interests.

The situation is that for 50 years we waited for private enterprise, and it failed. In 1914 officials of the Administration, in and out of Congress, considered that it would be folly to wait longer and caused to be introduced a bill creating a Shipping Board and appropriating $50,000,000 with which to begin the building of an American mercantile marine. This measure was opposed more vigorously than any other proposed, in the Senate at any rate, within a quarter of a century. It was fought with such determination and united forces by our Republican friends that a vote was prevented on it, although it was kept before the Senate almost to the day of final adjournment, March, 1915.

Early after the assembling of the next Congress a similar bill was introduced, and by that time the war had brought an awakening throughout the country, and it was perfectly plain that our commerce was being paralyzed, and we were in the humiliating position of having to beg for ships, and there were none to be had. Accordingly the bill passed Congress, was approved September 7, 1916, and without that legislation we could not have won this war when it was won.

We could not have moved our troops and supplies across the ocean. We could not have borne the freight rates charged against our products. We would have had no ships of any consequence now.

We are getting the ships—four or five cargo carriers each day—and we are operating ships procured and constructed in pursuance of that legislation. We will be able to bring our boys home. We are able to carry food to starving peoples throughout the world in our ships. We are taking our place as a maritime nation and are in a position to maintain a respectable status as such.

The next essential to "sea power" after acquiring the ships is to have the men to navigate them.

It is this essential that I desire particularly to speak about. It was to secure this essential as well as to make reasonable provision for safety of life at sea that what is known as the Seamen's act was passed and approved March 4, 1915. Its enforcement will practically equalize the cost of operation on all vessels using our ports, whether flying our own flag or any other, because equal wages, equal crews, and equal equipment will bring about equal cost. This act has been either greatly misunderstood or deliberately and grossly misrepresented. I can well understand how foreign shipowners do not think much of this act. American shipowners in the past were closely connected with European shipowners and they clamored for a subsidy. Instead of a subsidy we offer this law and under it America can have a merchant marine without paying any subsidy of any kind.

Let us be frank about it. The law requires the local inspectors to take into account the statutory requirements as to manning lifeboats and a certain per cent. of the deck's crew must have the rating of able seamen, but there is no law fixing definitely the number of seamen that shall be carried on vessels of the United States. The Secretary of Commerce is authorized to prescribe rules and regulations respecting the number of ordinary seamen, boys for training, the rating and number of men in the engine room. No such general rule, however, has been promulgated.

Prior to the passage of this act the difference between the wages paid to seamen hired in ports of the United States and other ports were about as follows:

Seamen's wages in New York were about 20 per cent. higher than wages paid at Liverpool; about 22.5 per cent. higher than in North Sea or Atlantic ports on the Continent of Europe; about 30 per cent. higher than the wages paid in the ports of the inner Mediterranean or Baltic; about 400 per cent. higher than the wages paid in India or China; about 300 per cent. higher than the wages paid in the ports of Japan.

Vessels capable of hiring their seamen in low-wage ports and compelling them to remain with the vessel in high-wage ports had, of course, a great advantage over any other vessels not so advantageously situated.

This was recognized by Congress when, on June 26, 1884, a law was enacted allowing American vessels to discharge their higher priced men in low-wage ports and to keep them by the vessel, by fear of imprisonment, in high-wage ports. The attempt failed, however, because the Americans quit the sea entirely and we could not get men even to become officers.

On March 4, 1915, Congress, disregarding the protests from foreign countries, enacted the so-called Seamen's act. The purpose of this act was to equalize the wage cost that so far had resisted all efforts. The further purpose was to induce the American to again seek the sea.

It was contended and finally believed that if the seaman was made a free man, with the right to quit the vessel in any safe port and the further right to demand and receive part of his earned wages, the seaman would seek the higher wages by quitting the vessel paying the low wage and thereby compelling the low-wage vessel to pay the wages out of the port.

The law became operative as to foreign vessels in July, 1916, and in August, 1916, the equalization began. It has continued ever since in spite of the war and in spite of the fact that several provisions of the law have not been permitted to function. This is no longer open to question. The Shipping Board has the evidence, which is not only undisputed by foreign consuls, but the act is claimed as the reason for a condition which they very much resent and against which they never cease to protest.

With his European competitor the American shipowner is on an equality for the first time in about 60 years. The equalization does not stop in American ports. Great Britain in February last made the wages of seamen out of British ports the same as the wages paid to seamen out of Atlantic American ports. This was done because it was cheaper to pay American wages from British ports and keep the men on board in American ports than to pay less, to lose the men, cause possible delay, and to pay the American wages and the crimp's fees in ports of the United States. Let the act stand. See that it is properly enforced on American vessels and the foreign vessels being placed on absolute equality with the American vessels will pay the same wages and will have no just grounds for complaint.

The general cost of operation of vessels in the same trade prior to the passage of the seamen's act was practically the same except as to the wage cost. All supplies were bought where they could be bought the cheapest. The American vessel paid higher wages to officers and seamen. While this item is really only a small per cent. of operating expense, we bring about equalization, overcome the objection, always greatly magnified, by raising the wages of all maritime nations to the American standard instead of following the old policy of lowering wages to foreign standards and causing our men to abandon the sea.

When it comes to consider that great question, "the freedom of the seas," it will be well to keep these matters in mind. They are likely

to be quite as important as questions of the extent of territorial waters, legitimate blockade, and other international outstanding conventions. I would not be understood as intimating that antagonisms may arise or that there is danger of selfish interests dominating in the council of nations. It is fair to state that England does not, so far as I am advised, dispute the principle of equal opportunity of all nations to navigate the seas fully and the equal right of all nations to extend their commerce into all parts of the world. It is quite true that England's policy has tended toward liberality in this regard. She allows vessels of foreign registry to compete with her own in her coastwise trade. Most nations, including our own, confine this privilege to vessels of their own registry, respectively.

Aside from certain provisions of the seamen's act on this point, our laws are substantially like those of England, Germany, Norway, and Japan.

It is a fact that our laws are not as strict as those laws nor are they as burdensome. For instance, England, Germany, Japan, and Norway have a load line; we have none. They can not carry deck loads at any time beyond a certain height, which in the winter is very much reduced. We have no such regulations. Those nations have their seamen included in their workmen's compensation laws. Our seamen are excluded. In those nations the vessels must pay for hospital for sick seamen. Here this is taken from the taxes paid by the general public, except there is a small amount paid by the vessel owners, which is taken from the deserting seamen; but that is not sufficient to support the hospital. In those countries the vessels or their owners have a very considerable liability to passengers or their heirs in cases of disaster. Our vessels and owners have none.

On November 16 last the Admiralty Board of Great Britain, thanking the mercantile marine and the fishing industry for their incomparable services during the war, said that "without the loyal co-operation of the former"—that is, the mercantile marine—"with the navy and its indomitable courage, the enemy's submarine must have entirely attained its object."

The board also said, as reported in the dispatches, that "aboard all ships, from the largest dreadnaughts to the smallest patrol boat, there were found officers and men of the mercantile navy combining with those of the Royal Navy in fighting the enemy and defeating its nefarious methods of warfare." "In the interest of the empire," the statement concludes, "the close connection between the merchantmen and the Royal Navy must prove a lasting one."

The navy or naval reserves have nothing to do with the operation of the merchant vessels in Great Britain; on the contrary, the officers and crews of the merchant vessels came to the assistance of the Royal Navy.

It is to the building up of this competent and efficient force of American seamen, unsurpassed in any country, that we must bend our most earnest endeavors. Then, indeed, the hour for an adequate American mercantile marine will have struck.

We can never succeed in establishing a creditable mercantile marine under our flag unless we arrange to furnish the men to sail the ships.

We can do that readily when we assure the men fair treatment, wholesome and healthful surroundings, reasonable compensation for services, and certain advancement for faithful and efficient performance of duties.

The American boy for many years past has found nothing to invite, but everything to discourage, him when he looked toward the sea. He has been driven to other occupations, even when his taste and yearning urged him to "do business on the great waters."

The sea power of any nation depends mainly upon the number of trained seamen that nation can furnish. It is the part of wisdom to foster in every way the development of seamanship and make attractive to those who turn to it as a permanent occupation the life of a mariner.

Before the days of Solomon the merchants of Tyre were operating ships and extending the trade to the then known regions. Their supremacy on the seas passed, after supporting dynasties and building cities, by the use of ships, to Greece; then to Italy; then to Portugal; then to Spain; then to Holland; then to England; and finally to the United States in the days of the Baltimore clippers.

We threw away the proud title of "The Mistress of the Seas." We deliberately allowed this country to become a "beggar of ships," and, with our commerce paralyzed, a "fettered and embargoed trafficker;" we changed the word "mistress" to "vassal." I do not think we will be guilty of such folly again. We adopted the policy of neglecting our seamen, finding crews wherever they could be had for the least money, taking the foreigner stranded on our shores, picking up the derelicts, treating them outrageously, until the word "sailor" became a by-word and a reproach. Until the act of December 21, 1898, seamen could be imprisoned for leaving an American vessel in an American port and held against their will to service. Until the seamen's act, which became effective as to foreign vessels in August, 1916, under treaties denounced by that act, seamen on foreign vessels could be arrested and imprisoned by our courts for leaving their vessel. It was not until that

(Continued on Page 9.)

A MEMORABLE MEETING.

Mention was made in last week's issue of the JOURNAL of the arrival in San Francisco on the 28th ult. of Tom Chambers and Captain Edward Tupper, treasurer and organizer respectively of the National Sailors' and Firemen's Union of Great Britain and Ireland. Brief reference was also made to their being met at the Ferry Building and taken in hand by a representative committee from the Pacific District of the International Seamen's Union of America.

A well attended and enthusiastic public meeting in honor of the two visitors was held on Monday evening, December 30th, in the spacious hall of the Sailors' Union of the Pacific. Comrade Walter Macarthur, veteran of the "Old Guard," acted as chairman and master of ceremonies.

It may as well be noted in passing that Comrade Macarthur's old-time, robust vein of humor is still capable of going it 100 per cent. strong when the occasion demands it. Also, he has lost none of his happy faculty for saying the right thing at the right time; a faculty which, seemingly, "age can not wither, nor custom stale."

After a few well-chosen remarks in the nature of a greeting to the visitors, and explaining their mission to American seamen, the chair introduced the first speaker of the evening, Captain Edward Tupper.

Comrade Tupper is one of those speakers with a "punch" in their delivery who will make an audience sit up and take note whether they want to or not. Also, he is evidently a believer in the time-honored injunction, "Shoemaker, stick to your last." As befits a live organizer of seamen, the burden of his advice to the assembled seafarers was, "Organize! organize!! organize!!!" "Every unorganized seaman is against us," he said, "no matter how much friendly sentiment toward the Union he may profess."

To give added point to his remarks, and by way of an object lesson, the comrade reviewed briefly the early history of the seamen's unions of Great Britain, and their long and disheartening fight against the labor-crushing tactics of the Shipping Federation Ltd. He feelingly described the heroic struggles and sufferings of British merchant seamen during the never-to-be-forgotten four years of the recent world-war. He concluded with an admiring reference to America's "new merchant marine," and expressed a fervent hope for closer co-operation between American and British seamen.

Captain Tupper was followed and ably seconded by his colleague, Tom Chambers. There is not much danger of anyone present going to sleep when Comrade Chambers is speaking. At handing out information to "the boys" about things they should know he is A1 at Lloyd's. His long suit is directness of speech. Rhetorical abstractions he eschews entirely. Concrete facts are apparently the only ones he deals in. A graphic and entertaining narrator of events, he is possessed of a rare ability to visualize to his hearers every outstanding incident touched upon in his discourse.

The subject matter of Comrade Chambers' address was necessarily much of a kind with that presented by the preceding speaker. A good deal of supplementary information was brought out by him, however. As, for instance, when he stated that the majority of the members of the National Sailors' and Firemen's Union of Great Britain and Ireland were enrolled in the Royal Naval Reserve, and that as soon as war was declared they were all drafted into the navy. This created a great scarcity of merchant seamen. Almost any wages they might have demanded could have been obtained by them. But the cooler heads among them dreaded a sudden and dizzy inflation of wages, forseeing the inevitable reaction after the war. Wiser counsel prevailed in the end, and wages were presently stabilized for the period of the war at the rate of £11 10s. a month for sailors and £12 for firemen, with a bonus of £3.

A national maritime board, headed by the minister of shipping, was created for the sole purpose of adjudicating disputes between shipowners and seamen. It has been of great assistance to the seamen in securing their rights.

The comrade wound up his address with an excoriating denunciation of the ruthlessness of German submarine warfare. The wastage of human life from that cause alone he described as appalling. At a low estimate more than 17,000 British subjects had been sent to untimely graves by German submarines, 14,000 of whom were merchant seamen. As a fitting rebuke of such wanton barbarity he said British seamen had resolved not to recognize the German flag or to sail with her seamen. In no other way, he said, can Germany be brought to see the enormity of her offense.

Editor Scharrenberg, of the JOURNAL, was the next speaker. As an American citizen, imbued with American ideals of justice and humanity, he declared himself in absolute and unqualified accord with the last speaker's sentiments in respect to Germany's ruthless submarine warfare. On behalf of the seamen on the Pacific Coast he ventured to assure the visitors that no language, however strong, which they might use in condemnation of that particular crime against civilization could adequately convey the feeling of horror and detestation which its contemplation had aroused in both himself and those for whom he spoke. The freedom of the seas to civilians engaged in lawful pursuits he held to be at all times, even in war, as fundamental and sacred a right as the freedom of men on land guaranteed by all civilized nations.

Other speakers of the evening were Patrick Flynn, secretary of the Marine Firemen, Oilers and Watertenders' Union of the Pacific; Eugene Burke of the Marine Cooks' and Stewards' Association of the Pacific Coast, and Secretary I. N. Hylen of the Alaska Fishermen's Union. Last, but by no means least, came Treasurer Ed Andersen, whose chief boast in life is that he joined the Sailors' Union of the Pacific on the day before it was organized. Be that as it may, the old war horse was in great form, and favored "the boys" with one of his usual rattling, straight-from-the-shoulder talks.

The meeting adjourned with three rousing cheers and a tiger for the visiting comrades from over the seas.

Russia, with a population of nearly 130,000,000, has only about 19,000 physicians. The United States, with a population of about 100,000,000, has over 120,000 physicians.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Agricultural Lands Not Owned by Nation.

In his annual report Commissioner Clay Tallman of the United States General Land Office dispels the belief that the Government owns large areas of land suitable for crop farming.

There are approximately 225,000,000 acres of remaining unappropriated and unreserved public land, and the commissioner says:

"Many people seem to believe that great areas of these lands are virgin prairie grass lands like Kansas, Nebraska, or the Dakotas, all ready for the plow and the immediate production of wheat for our allies and ourselves, or, if situated in the arid regions, that water is readily available for reclamation. The fact is that with some exceptions the great bulk of this 225,000,000 acres is essentially a grazing proposition. Generally speaking the crop lands are gone into private ownership.

"Increased land values and the constant demand for more lands, coupled with liberal laws, have resulted in the absorption of practically the entire remaining farm lands suitable for crop production. Of course there are exceptions to this.

"The point we desire to make clear, and which the public should understand, is that, generally speaking, the remaining public lands are not farm lands in the ordinary sense of crop production at all. This does not mean that these lands are not useful, for they support a great portion of the meat and wool production of the country and are carrying their full capacity of cattle and sheep."

Foreign Interests Oppose Seamen's Law.

Foreign shipping interests are the most vigorous opponents of the Seamen's law, declared Silas Blake Axtell, attorney for the International Seamen's Union, in a reply to the claim of Capt. Robert Dollar that certain sections of this law must be repealed.

"We want to bring about a Government shipping office," said the attorney, "so that there will be an end to the 'crimping' or boarding-house system by which seamen are hired and through which shipping masters are compelled to pay from $5 to $20 a man. These 'crimping' places have got control, to a large extent, of the placing of seamen on foreign ships.

"It may be stated here," continued Mr. Axtell, "that Capt. Dollar has several ships in registry at British Columbia under the Union Jack. And let me add that foreign shipping interests are the most vigorous opponents of the act, which has humanitarian principles affecting passengers as well as seamen. Even now there is pending in the United States Supreme Court an action filed by the British embassy to test the constitutionality of the act. Americans will not go to sea at wages inferior to shore wages and under conditions of less liberty and greater hardships than at shore jobs.

"Since the beginning of time, originating when all trade was in sail, the system on foreign vessels has been to hold the seaman bound to his ship by legal and economic bonds. He was compelled to sign an agreement to stay with a ship a number of years. The arrangement provides he shall have no shore liberty and no money during a round trip except at the option of the master. He is subject to all sorts of fines and penalties.

"The Seamen's Act does much to give liberty and a few rights. It makes it possible for an American to go to sea."

A Union "Authority."

Brigadier General Disque, in charge of the Government's air spruce division, addressed the recent meeting of Loyal Legion of Loggers and Lumbermen in Portland, Oregon. This organization consists of employers and employed and was formed by General Disque, who is charged by trade unionists with fostering a strikebreaking agency.

The General insists that he understands the trade union movement. As proof he made this statement:

"Laboring men ordinarily are not experienced in business affairs and naturally delegate their powers to those of their numbers who are quick-witted, keen and aggressive. These delegates soon become professionals and settle down as perpetual champions of labor in the war against the employer. All men are ambitious to be successful and some labor officials measure their success by the number of fights they can stir up with employers. Unfortunately laboring men themselves in many instances have encouraged this type of official, and to hold his salaried job he feels that he must produce his quota of so-called victories over employers."

The General made no reference to labor's commitment to the policy of arbitration.

Unionists Recognized.

Ex-Governor Lind of Minnesota, acting as umpire for the National War Labor Board in the case of organized machinists versus the Niles-Bement Pond Company of Plainfield, New Jersey, rules that these workers are entitled to present grievances to the company through representatives of their own choice, "whether such representatives be at the time an employe in the establishment or not."

The company employs between 300 and 400 men, 90 per cent. of whom are union. The demand for the union shop was not involved in the wage controversy, but the company refused to treat with the union's representative on the ground that he was not an employe. The company justified its action on the ground that the National War Labor Board had declared where union and non-union men work together and the employer meets only with employes engaged in such establisments, the continuance of such conditions shall not be deemed a grievance.

The workers show that prior to last year grievances were handled by union representatives, but that lately a change has been made. Umpire Lind holds that the ruling of the company referred to contains a provision that the War Labor Board re-

(Continued on Page 11.)

World's Workers

The women of France grouped under several organizations representing many shades of political opinion, have issued a manifesto demanding recognition of women's political rights before the next elections.

Carl Kautsky, the Independent Socialist leader, is preparing data for the German "White Book" on the origin of the war. It is expected to be made public around the first of the year in three or four volumes containing all official documents including these supposed to have been destroyed.

The Finnish women have erected the first memorial to commemorate the enfranchisement of women at the foot of the highest hill in the Finland Alps near the town of Frobjerg. The stone bears the words: "On man and woman equal rights confer; let her serve him; likewise let him serve her."

All Bavarian industries employing more than ten persons were ordered to shut down from December 23 until January 2 for the purpose of saving coal. The workers will receive .90 per cent. of their ordinary wages, of which the employers will collect two-thirds from the communities in which they are located, under a State Treasury ruling made for the purpose of guarding industries.

"Every workman in his trade union: every employer in his trade association." This ideal of trade organization announced by Dr. Addison, British Minister of Reconstruction, in his speeches early this year, is being steadily helped toward fulfillment by the interim joint trade bodies which his ministry is setting up. The interim industrial reconstruction committees which have been established in certain less highly organized industries (and of which some 20 have already been formed) are working hard toward making their trade bodies fully representative. The interim committee for the glove trade, for example, is sending out a circular to all members of the trade urging both employers and workpeople to enroll in their respective associations and trade unions.

For the purpose of uniting the women of Canada for their political responsibilities, the Women's Party has been organized in Toronto, Ont. The platform provides for war until victory, restitution and restoration, food rationing, reduction of non-essential industries, ridding government departments of pacifists and pro-Germans, better co-ordination of military, naval and aerial efforts, the maintenance of the present alliance after the war, Canadian representation in the British Parliament, imperial control of national resources, essential industries and transportation, the prevention of German financial penetration and industrial exploitation in the Empire by the measures recommended in the Paris Economic Conference and others, shorter hours of labor rather than "control of industry by the workers," increased production, absolute recognition of women by the government, equal pay for equal work, equal marriage laws, equal parental rights, immigration reforms, opportunities of education, and a housing scheme involving co-operative housekeeping.

Pacific Coast Marine.

The United States Shipping Board steamer "Bancroft" towed the "Neola," also under Government operation, into San Francisco Bay on January 2. En route from Honolulu the engines of the "Neola" broke down. The "Bancroft," on her way from San Francisco to the islands, turned about and took her in tow. After loading additional fuel the "Bancroft" will make another start for the islands.

The Associated Terminals Company have made application to the Harbor Commission of San Francisco for one of the old terminals on Islais Creek, which the Harbor Commission plans to install shortly. A series of tanks and pump for handling vegetable oil brought to San Francisco from the Orient will be installed, the plan being for a number of the importers to have privately-owned tanks, while others will be permitted to use the plants installed by the Harbor Commissioners.

Members of the State Harbor Commission of San Francisco refuse to discuss the advisability of the proposed measure to take San Francisco's water front away from the State and turn it over to the municipality. "As servants of the State we feel that any expression of opinion in the matter should come from the Governor rather than from the Harbor Board," said Commissioner Miles Standish. It is unofficially reported, however, that the Harbor Commissioners as a unit opposed the shifting of the local pier control.

Lumber shipments from the Columbia River during the month of December were unusually light. According to statistics, twenty-three vessels loaded at the mills in the lower Columbia River districts and their combined cargoes totaled 17,115,000 feet of lumber, all for points in California. In the same period five vessels loaded 4,439,268 feet at the up-river mills, making a grand total of 21,454,268 feet of lumber that left the Columbia River in cargoes during the month. The shipments of lumber products included 335,110 bundles of box shooks for the Hawaiian Islands.

The entire fleet of gas boats operated by the Diamond Match Company in the San Diego kelp business have been purchased by the Crowley Launch and Lighterage Company of San Francisco. These include the "Diamond King," "Diamond Queen," "Diamond Prince," "Wasco" and "Mohalo." All are equipped with 100-horsepower engines. Each craft is sixty-two feet long, fourteen feet beam and about six feet draft. Six of the barges also have been purchased. They are from 90 to 110 feet in length. This will make the combined Crowley fleet one of the biggest in the country.

C. W. Cook, assistant director of operations for the Shipping Board in charge at San Francisco, has resigned, and Harold Eby, assistant, is filling the vacancy. Cook will take a vacation, later to resume his old post as head of the American-Hawaiian Steamship Company at San Francisco. Eby was manager for the Kosmos line and its German-owned vessels operating into San Francisco before the war in 1914. He had charge of the interned Kosmos ships at San Francisco until the United States entered the war. When the ships were seized Eby became associated with the Shipping Board.

The thousands of commuters and others crossing between the Oakland and San Francisco ferries have taken many lingering looks at the huge camouflaged freighter anchored in the stream, for by the time another New Year's day comes around the ship of deceit will have passed into history. The "Zaca," launched by the Moore Shipbuilding Company on August 29, was the last vessel built in a local plant to be daubed with the various streaks intended to deceive the commanders of German submarines. In the future the hulls and superstructure will be painted the regulation tones of peace and the word "camouflage" will no longer be applied to matter afloat.

Edward A. Christensen, John R. Hanify and Cliff Weatherwax have organized an importing and exporting business at San Francisco under the firm name of Christensen, Hanify and Weatherwax. Offices have been opened at 210 California street. H. A. Wilson, formerly in charge of the West Coast business of Comyn, Mackall & Co., has become associated with the new company and soon will leave for the East as a diplomatic trade investigator. Wilson, whose home is in Chile, will visit the Eastern and gulf cities and will then leave New Orleans for South America. The new company hopes to promote an extensive shipping and trading business in South America.

Because the trend of the shipbuilding industry is away from wood to steel construction, there is a possibility that the Foundation Company, now operating four of the largest wooden plants on the Coast, will erect a large steel shipbuilding plant in San Francisco, according to Edward E. Jenkins, assistant to Vice-President Bayly Hopkins. Jenkins is at the Palace Hotel, on his way to Victoria, where two of the company's plants were built. The others are in Tacoma and Portland. "Our company has had a San Francisco plant under advisement," said Jenkins, "because of its advantageous position. Our company already has extensive interests in San Francisco in other lines."

Seattle shipbuilders are proud of their 1918 record. During that year they added ninety-six ocean-going vessels of various types and designs, with a total deadweight tonnage of 651,200, to the world's merchant marine. This figure includes only vessels built in Seattle. Sixty-one of the ships were steel freighters of 7500 tons or more, with a total tonnage of 535,200. During the year the Skinner & Eddy plant revolutionized the world's steel shipbuilding by first turning out a steel freighter in less than 100 days and later putting one in commission in seventy-eight days after keel-laying. This company launched thirty large steel vessels, with a deadweight tonnage of 268,000, and delivered twenty-six of them during the year.

Joseph Barker, port engineer for the Mason Navigation Company, who operated the majority of the wooden steamers between San Francisco and Honolulu, announced that the timber vessel is now improving with age and there is less difficulty in the operation. Where there were formerly some ten or twelve vessels constantly laid up for repairs, this number has been reduced to a scant four. The "Coconino" is still being tinkered with, but will be ready to receive cargo in the near future. The "Mono" is at the Hanlon plant, the "Wihaha" is having the engines repaired and the "Bellota" is at the Union plant receiving the last finishing touches to fit her for the sea. The hulls are gradually tightening up and in a few months it is expected that but little calking will be needed.

Revocation of the license of C. D. Bunker & Co., San Francisco shipping brokers, on account of the firm's connection with the steamer "Sacramento" conspiracy case, will be sought by John O. Davis, Collector of Customs, now en route for New York and Washington. Davis said he would also present the case of Swayne & Hoyt, another shipping firm involved through R. H. Swayne, who was indicted and pleaded guilty. An increase in pay for warehouse men in the Customs Service from $1400 to $1600 a year will be sought by Davis. The Government is reimbursed by the warehouse owners, who have been permitted by the Railroad Commission to increase their rates, the increased wage being one of the representations upon which the increase in rates was granted. The Government has failed to authorize the wage increase.

San Francisco foreign traders have hailed with satisfaction the further removal of import restrictions and the substantial reduction in west-bound transpacific ocean rates. Restrictions on the importation of all of the articles in the second list of the War Trade Board, with the exception of ferro manganese and glassware, were removed Tuesday afternoon. In addition to the forty-four articles on this list, the restrictions governing the importation of cotton manufactures and gypsum were also eliminated. Among the outstanding items on this list are shellfish, tobacco leaf, fresh, cured and dried fish; animal oils, dairy products, meat products, bones, hoofs and horns, cork and manufactured cork, dried, frozen and preserved eggs and egg yolks; furs, glue and glue stocks; animal and human hair; all kinds of paper and paper manufactures, and vanila beans. Licensing regulations are still effective, but licenses will be granted freely and with as little delay as possible, according to C. O. G. Miller, head of the local office of the War Trade Board. Ocean rates on freight to China and Japan have been reduced from $50 to $30 and the rate to Manila is made $25 a ton. These rates are said to be sufficiently low to attract a large amount of freight destined to transpacific ports from the Middle West

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, JANUARY 8, 1919.

WHAT IS SEA FREEDOM?

Although there have been many surmises it is not on record that President Wilson at any time since January 8, 1918, gave any detailed definition of what he meant by sea freedom when he laid down his peace terms to the Central Powers.

Notwithstanding this absence of explanation on the part of President Wilson, some individuals who pretend to be close to him have intimated that he would, at the Peace Conference, urge the most liberal interpretation of the phrase, the "freedom of the seas." Not only that, but there have been many hints from these same sources that this implied, in some way or other, the diminution of British sea power. As was inevitable, the British press has freely answered the intimation.

So far as the average American knows, these insinuations of friction between the President and the Allied chiefs as regards future naval policy are not merely groundless, but highly reprehensible. The well-informed are convinced that behind it all is some of that old sinister propaganda which is so familiar, and which did not by any means cease with the signing of the armistice. It is a fact, however, that while most of it is attributed to the "Bureau of Enemy Psychology," some of it is due to merely careless statements which have found currency on both sides of the Atlantic.

Far from there being any danger of inharmony between the United States and Great Britain on the question of naval power, there is every reason to believe that the President regards the maintenance of the British Navy at maximum strength, and the increase of the American Navy, as the corner-stone of world peace for many years to come.

But no matter what the President's exact viewpoint may be upon sea freedom and related things, there is no doubt whatever regarding his attitude on freedom for the men who follow the sea in the capacity of merchant seamen.

Let it never for a moment be forgotten that the President in affixing his signature to the American Seamen's Act completed the work of the immortal Abraham Lincoln by giving freedom to the only class of American workers who were still subject to involuntary servitude. To-day all American seamen are "free men." Moreover, one of the points adopted at the Inter-allied Labor Conference for submission to the Peace Conference demands the same right for all the merchant seamen of the world. The organized seamen of Great Britain and Ireland and, in fact, the organized seamen everywhere, except perhaps in Germany, are unqualifiedly committed to this change in the seamen's legal status.

As stated, it may be difficult to define sea freedom in its ordinarily accepted meaning, but there should be no difference of opinion and no hair-splitting or contentious argument upon the world-wide recognition of a new freedom for seamen—i. e., their sacred right to quit their jobs like all other workers whenever the ship on which they serve is anchored or tied to the wharf in a safe harbor.

That much, at least, the merchant seamen of the Allied nations expect and demand as a fitting reward and partial recognition for services rendered and sacrifices freely made in the great war for world democracy.

LABOR AND IMMIGRATION.

It is most gratifying to note how American public sentiment toward immigration has slowly but surely accepted as its own the pre-war organized labor attitude upon that subject.

Before the war organized labor fought almost single-handed for the enactment of legislation which would effectively restrict the ever-growing influx of immigrants. It is scarcely necessary at this time to relate the prophetic arguments advanced by Labor, for the events of the past few years have converted practically all America to the organized labor policy of a wise and intelligent immigration restriction.

Take, for example, the following paragraphs from a leading editorial on immigration in the Saturday Evening Post:

> Two-thirds of our troubles in America are imported. Shall we keep on importing them? From our silly system of smart society, taken from European capitals with their class distinctions and monarchical traditions, down to our bogus Socialism, made in Germany and Russia as a panacea for conditions that were utterly foreign to America until indiscriminate immigration planted them in a few plague spots in our great cities, our worries are due to our carelessness as to who and what comes to America.
>
> This whole business of immigration, both of ideas and men, needs revision. Why keep out anthrax and smallpox and admit rabies freely? We need an influx of labor to keep our factories going and to expand our commerce, is the usual answer. Not that kind of labor—nor any kind of labor that we cannot pay well and that is not good material for citizenship. For what shall it profit us to have all the commerce of the world if in the end we blow up in one grand Bolshevik bust? It might be better business to go just a little slower, to educate what unassimilated labor we have into American citizenship.

Such corporations as the great American steel trust and the big foreign transatlantic steamship companies have been the only real beneficiaries of unrestricted immigration. The former have always had on hand a new supply of immigrant labor and the latter have piled up fortunes in carrying immigrants as passengers to our shores.

Needless to say, all other worthy elements in our National life have seriously suffered in order that these two selfish factors might coin more and more dividends.

Happily, America seems at last to have come to a realization of her weakness in this respect. In a nutshell, we want neither autocracy nor anarchy, under whatever name. We want an orderly development and a constant improvement in our Government and our laws to the end that all things good and true may find fertile soil and enduring growth.

TAX ALL IDLE LAND.

All who read and think know that the present unjust distribution of wealth develops on the one hand a class idle and wasteful because they are too rich, and on the other a class idle and wasteful because they are too poor. It deprives men of capital and opportunities which would make them efficient producers, and thus greatly diminishes production.

This unjust distribution which is giving us the hundred-fold millionaire on the one side and the tramp and pauper on the other generates thieves, gamblers and social parasites of all kinds and requires large expenditures of money and energy in watchmen, policemen, courts, prisons and other means of defense and repression. It kindles a greed of gain and a worship of wealth and produces a bitter struggle for existence which fosters poverty, increases insanity and causes men whose energies ought to be devoted to honest production to spend their time and strength in cheating and grabbing from each other. Besides the moral loss, all this involves an enormous economic loss.

It is freely conceded that private monopoly of land is one of the fundamental causes for our present unjust distribution of wealth.

To begin with, land monopoly is the prime cause of that distribution of population which is crowding the people too closely together in some places and scattering them too far apart in other places. Families live on top of one another in cities because of the enormous speculative prices at which vacant lots are held. In the country they are scattered too far apart for social intercourse and convenience, because, instead of each taking what land he can use, every one who can grabs all he can get, in the hope of profiting by its increase of value, and the next man must pass farther on. Thus we have scores of families living under a single roof and other families living in dugouts on the prairies afar from neighbors—some living too close to each other for moral, mental or physical health, and others too far separated for the stimulating and refining influences of society. The wastes in health, in mental vigor, and in unnecessary transportation results in indescribable economic losses.

The California Farmer-Labor Alliance is now urging upon the State Legislature the adoption of a system of land values taxation that shall include a supertax on all idle, uncultivated land as well as on land held for speculative purposes. In other words, the Alliance furthers a system that shall at once tend to disintegrate monopolistic ownership of large areas and that shall place a larger share of the burden of taxation on monopolistic wealth at its chief source.

Without doubt there are other good methods of bringing about a change in the present unjust distribution of wealth, but it is hard to understand why the taxes herein enumerated should not be welcome by all useful citizens, which means at least two-thirds of California's entire citizenship.

DON'T SELL YOUR BOND!

The wide distribution among millions of American citizens of Liberty loan bonds makes our Liberty loans, according to Secretary of the Treasury McAdoo's expressed opinion, the soundest of national financing. That these bonds be kept widely distributed amongst the American people is of great importance to the Nation and to the individual holders of the bonds.

United States Government bonds in the past have gone above par, as high as $139 for a $100 4 per cent. bond. That Liberty bonds will go well above par when peace comes is very probable. Holding one's Liberty bonds, therefore, is wise as well as patriotic.

Every holder of a Liberty loan bond should heed the caution to hold to his or her bonds, because there are going to be great efforts by shrewd and unscrupulous people to buy or secure at inadequate prices these bonds from holders who are not well informed as to stock and bond values.

Worthless or near-worthless stock or stock of only speculative value—"wildcat stocks" they are called—are going to be offered for Liberty bonds. Some will be urged not to sell or exchange their Liberty bonds, but to buy the stock and give the Liberty bonds as security for the purchase price. This is a camouflage attempt to get Liberty bonds in exchange for the stock of their companies.

If every holder of a Liberty bond will consult a bank before he disposes of it, the get-rich-quick concerns will not prosper, but the individual bondholders will, and the American people as a whole will be benefited.

Sir Bernard Mallet, president of the Royal Statistical Society, has declared that the United Kingdom has lost by the fall in births during the war more than 500,000 potential lives. During the same period he estimates that Germany has lost 2,600,000 and Hungary 1,500,000. The greater decline in the birth rate in the Central Empires is ascribed to the fact that the poorer classes in these countries have suffered greatly in health and vigor on account of the war, while the corresponding classes in Great Britain have actually enjoyed more favorable conditions than in time of peace.

A scheme is in progress in Copenhagen for supplying homes for women who are earning their living by the erection of a Central House to consist of 135 separate rooms, five two-room flats, and ten studios for women artists. The idea is that the residents should be shareholders and that there should be no institutional stamp anywhere. There are to be lifts by which meals can be served in the residents' rooms, and there will also be a common dining-room as an alternative. Arrangements will be made for cleaning the flats by subscription.

The Bodleian Library in England contains over 700,000 volumes and 33,000 manuscripts, carefully classified and conveniently arranged for everyday use. Besides its valuable early collections, the library, under the present copyright act, receives a copy of every new publication, so that its annual requisitions are large and important.

A BELATED PROTEST.

Senator La Follette's Pointed Comment on the Rights of the President and the Duties of Congress.

The United States Senate has suddenly broken into violent denunciation of President Wilson's plan for a League of Nations and his program for the world's peace.

Senators and Representatives have groveled at the feet of the Executive for nearly two years. Surrendering their right to an authoritative voice in declaring foreign policies, evading responsibilities when it was their duty to speak, they have at the eleventh hour and fifty-ninth minute, joined in a belated orgy of furious protest.

I am not contending that the American people are bound to accept the League of Nations as the arbiter of the rights of peoples, and the custodian of the world's peace.

I am not urging the right of any President to declare the objects and purposes of this or any other war in which the United States is involved. On the contrary I have again and again asserted and shall always maintain the right of the people and the right of their representatives in Congress to declare and finally to determine, every policy of this Government be it foreign or domestic.

But I take this occasion to observe that if these chosen representatives of the people, elected under the Constitution expressly to speak for them, entertained any opinions whatever upon these vitally important subjects, then certainly an earlier assertion of opposition to the President's proposal for a League of Nations and of his program of peace terms was imperatively demanded. Indeed it was the right and the duty of Congress to speak first.

This right Congress has often asserted; this duty to the public it has often discharged. For there was a time when Senators and Representatives, in war as well as in peace maintained the independence of the Congress and jealously guarded its rights under the Constitution as vital to free government.

In 1881, the House passed and the Senate concurred in a resolution declaring the policy of this Government regarding the transfer of any Spanish-American provinces adjoining the United States, to any other foreign power.

In 1864, the House passed by an overwhelming vote a resolution providing "that Congress has a constitutional right to an authoritative voice in declaring and prescribing the foreign policy of the United States; and it is the constitutional duty of the President to respect that policy no less in diplomatic negotiations than in the use of the national forces when authorized by law."

In 1898 Congress passed a resolution declaring the future policy of this Government toward Cuba.

There is an unbroken line of precedents upon this subject down to the time of the present Administration.

So, too, Congress has the undoubted right and it is clearly its duty to declare the objects and purposes of war, which would of necessity involve, in the main, a statement of the terms of peace. Upon this proposition both precedent and authority are so overwhelming as to require no citation.

But when Congress surrenders its rights and shirks its responsibilities in such crises, throughout the war and until peace is at hand, it leaves the President the widest scope for the exercise of autocratic power.

The people may deprecate the betrayal involved in such a surrender of their right to a voice in declaring a momentous foreign policy, and of their right to determine the objects and purposes to be achieved by a war in which they have made such enormous sacrifices, but Senators and Representatives can hardly be heard to complain because the President has occupied the field which they have abandoned.

On the 22nd of January, 1916, the President began the discussion of his plan for a League of Nations to constitute "a League for Peace." It was the declaration of a great foreign policy. It became the topic of world-wide debate. Yet Congress was silent upon the subject.

Upon the 8th of January, 1918, the President submitted the first installment of his "program of the world's peace."

Outside the Halls of Congress the restraints imposed upon public speech curbed discussion.

The blame for this rests upon the Administration and the Congress. Free speech has been suppressed in the United States.

In the Senate and the House there were heard no words of criticism.

If the President's program for a League of Nations is wrong now it was wrong then.

If the terms of peace which he proposed—as for example the freedom of the seas—are not "acceptable" now, to England and to certain United States Senators, because "obscurely" stated, or because too clearly stated, those terms of peace were not "acceptable" when they were stated by the President ten months ago.

If protest were to be made for any reason, I submit that the time to make that protest was immediately after the President presented his terms of peace to the anxious world.

If the people of the United States were persuaded to believe in the truth of the statement of any of the objects and purposes for which we were fighting this war, it was that we were

P. O. Box 280. Tel. Main 557.

Portland Agency, Dec. 30, 1918.
Shipping medium; prospects uncertain.
JACK ROSEN, Agent.
88½ Third Street. Tel. Main 6013.

San Pedro Agency, Dec. 30, 1918.
Shipping fair.
HARRY OHLSON, Agent.
128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, Dec. 23, 1918.
Shipping poor; prospects poor.
JACK EDWARDSON, Agent.
P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Jan. 2, 1919.
The regular weekly meeting was called to order at 7 p. m., Ed. Andersen in the chair. Secretary reported shipping slow, plenty of men ashore. Eugene Steidle and Leonard Norkgauer were declared elected delegates to the International Seamen's Union Convention. Donated $25.00 to the Telegraphers' Union now on a lockout.

EUGENE STEIDLE, Secretary.
42 Market Street. Phone Kearny 5955.

Seattle Agency, Dec. 26, 1918.
Shipping fair.
LEONARD NORKGAUER, Agent.
Grand Trunk Dock, Rooms 203, P. O. Box 214. Phone Main 2233.

San Pedro Agency, Dec. 27, 1918.
Shipping good; no members idle.
HARRY POTHOFF, Agent.
Sepulveda Bldg., 128½ 6th St. Phone Home 115; Sunset 66W.

DIED.

Peter E. Lundquist, No. 996, a native of Sweden, age 39. Died at Fort Bragg, Cal., Dec. 27, 1918.

Emil Ramlow, No. 945, a native of Germany, age 41. Died at San Francisco, Cal., Jan. 4, 1919.

The ship building program of the Australian Commonwealth will be augmented by the addition of about fifty new vessels soon to be constructed. Thirty of them will be wood and the remainder steel. The Australian government is already building fourteen wooden ships of 2000 tons capacity.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

State Department officials declare they know nothing of the report that the French and British governments had forbade the assembling at Paris of a Socialist and labor conference, to remain in session throughout the period of the peace conference to watch and discuss the proceedings of the official peace delegates from a working class standpoint. Secretary Morrison and John Frey declare they know nothing of any such objection to a world conference of labor. Samuel Gompers and his four associates—Vice-Presidents Alpine, Green, Duffy and Duncan—are getting ready to sail for France.

The story that the labor congress at Paris was to be put under the ban may have arisen from the incident of the refusal of the French Premier, who is unpopular with the French labor movement, to permit a great parade by the labor men to welcome President Wilson to Paris. Clemenceau put the "lid" upon the labor demonstration, and the leaders of the movement decided that rather than cause any friction which might embarrass Mr. Wilson, whom they consider the spokesman of the international anti-militarist ideals of European labor and socialism, they would make no public protest. However, the Socialist members of the French parliament went to the residence of the American President and gave him a message from the masses of the working people of France.

From that moment the situation in France has been more strained than ever before during the war, as between Clemenceau and the labor and Socialist organizations. Hour by hour the resentment against the treatment accorded French labor has grown, until the French government has found it advisable, if not absolutely necessary, to grant two concessions to this opposition. The first was the unofficial announcement that France would not send an army to fight against the Russian Bolsheviki. The second was the official order to Paul Milukoff, former Cadet foreign minister in Russia, and last summer the promoter of a new royalist and pro-German party, to leave France immediately. Milukoff, along with a large number of the old imperialist following, exiles from revolutionary Russia, had come to Paris to help write the peace treaty.

Two men at least, among the delegates to the official peace congress, can claim some connection with the labor movement in the past. Emile Vandervelde of Belgium, Minister of State, was before the war the leader of the Socialist movement of Belgium, which was the political arm of the labor movement. Bissolati of Italy, now a member of the royal cabinet, was likewise at one time a leading Socialist and spokesman in politics for organized labor. Bissolati, however, has long since been expelled from the official Socialist organization, due to his becoming conservative at a time when the labor and Socialist movements of Italy were becoming constantly more aggressive. Like the Italian party now touring this country, led by Deputy DeAmbris, he is no longer on speaking terms with his old associates. Vandervelde, on the other hand, remains a leader of Belgian Socialists, and in close touch with the Socialists of the Continent and of England.

If none of the working-class republics of Europe are represented at the peace conference, then we may see little Belgium the sole channel of sympathetic communication between the premiers and diplomats at the green table and the congress of spokesmen of the world's organized wage workers, outside. Vandervelde may become the go-between in some of the most important negotiations ever undertaken by organized workingmen. True, President Wilson is to be at the peace table for at least part of the time, and he will lead the fight for the general principles that labor insists upon. But as the head of a government he will not go into conference with the labor men, as Vandervelde would do as a matter of course.

Andrew Furuseth, head of the International Seamen's Union of America, is now in Europe, organizing the sentiment of the transport workers in support of the Seamen's Act, to prevent any action by the peace congress which would prevent its future enforcement. His arrival seems to have been followed by some independent action by British sailors who disapprove of the refusal of J. Havelock Wilson and his British Sailors' and Firemen's Union to permit labor and Socialist delegates to sail from England to France. Camille Huysmans, the general secretary of the International Socialist Bureau, formerly at Brussels, has reached France, thanks to the British Seafarers' Union, whose members navigated the vessel which carried him across the Channel.

The desire of the commercial imperialists here and abroad to repeal the Seamen's Act was again shown in the Senate, when Senator Fletcher, one of the defenders of that measure, put into the record a preamble, resolution and report written by Frank C. Munson, chairman of the Maritime Affairs Committee of the New York Board of Trade and Transportation, and endorsed at the last meeting of that board, demanding the immediate repeal of most of the important provisions of the Act. Senator Fletcher told the Senate that there seemed to be an organized propaganda in the press and among boards of trade and chambers of commerce and similar commercial organizations to nullify various parts of this legislation, and he gave it as his opinion that the attempt would not succeed. The objections to the law were unsound.

Senator King of Utah asked whether it were true, as claimed by Captain Robert Dollar of San Francisco, that the Seamen's Act had "resulted in driving from the Pacific Coast practically all American shipping."

Fletcher answered that Captain Dollar "is very well advertised as one of the great shipowners of the country, and from the accounts published in the magazines and newspapers one would imagine he owned perhaps the greatest fleet flying the American flag. The fact is, according to my information, that Captain Dollar owns seven boats, and that the total tonnage of the whole Dollar line is about 23,000 tons—about one good-sized ship.

"It is utterly absurd to claim that the Seamen's Act drove the American flag off the Pacific, because the Act has not been in force with respect to the matters which have been objected to in it. I think the ships were sold because they brought extraordinarily high prices."

Captain Dollar would find a real crony in Colonel (of militia) Lydecker, president of the National Security League, who has been on the stand in the Congressional probe into his league's affairs. Lydecker admitted, during the first day, that the Carnegie Foundation, through its holding concern, the Carnegie Corporation, gave the Security League $150,000 for "educational" work, including universal military instruction and training. It is said that a State constabulary system was also on the Carnegie "educational" program. Old John D. Rockefeller liked the idea, too, so he let go of $25,000.

Lydecker explained to the committee the importance of this plank in the Security League program: "Creating a greater regard for representative government as distinguished from mass administration; protecting our National Legislature from dangerous proletarians."

"We are doing everything in our power," Lydecker said, "to educate the people by our public speakers and our literature, that a republic of a hundred million people can be governed wisely through wise representatives and not by mass rule or mob, and we believe that our people should be taught to have the greatest respect for their representatives."

"Let me ask you," said Congressman Caraway of Arkansas, "what do you understand a proletarian is?"

"Well," replied Lydecker, with asinine solemnity, "I don't know exactly what a proletarian is, but a dangerous proletarian is an ignorant demagogue."

He also remarked that his league was not opposed to "the class that needs help and uplifting and education—the poorer class."

As the result of the first two days of investigation, the Congressional committee found that the Security League had spent only something about $600,000 thus far in its efforts to make the "poorer classes" show proper respect to wise representatives, according to the Carnegie-Rockefeller rules. Security against government by the people comes high.

There is one public official in Washington who devoutly seconds the hope of the Security League that the "poorer classes" may become more obedient. Postmaster-General Burleson finds it more difficult every day to contain his feelings on the subject. Here is this strike of the telephone employes in Minneapolis, in the face of Burleson's order forbidding them to quit in support of their demand for a living wage. He says there can be no strike under Government operation of an industry. When a strike occurs nevertheless, he does not see a strike—he sees treason.

The funny part of Burleson's proposition is that he has just one country to cite as an example of the rule that public employes who have no voice in the management of their industry must not and do not strike. That country was imperial Germany. Over in Canada they have had a lot of highly successful strikes, not merely of telephone operatives but of postal employes, firemen and policemen. The same thing has happened in municipal public utility enterprises in England and France and Australia.

Speaking of Canada brings up the fact

that the war veterans in Vancouver have elected twelve delegates to act with an equal number to be chosen by the labor unions, to agree upon a program of soldier-labor political action. These delegates have submitted this platform:

1. That the activities of the organization embrace the municipal, provincial and federal fields of government.

2. The nationalization of the natural resources and government operation of basic industries.

3. Substantial reduction of working day to six hours.

4. Civil and municipal employment to be set aside for disabled soldiers and sailors with dependents.

5. Pensions and a bonus for disabled men when unemployed.

In contrast to this is the program which will be emphasized by the Labor Congress of Yucatan, meeting January 7 at Merida. The big issue down there will be made prohibition. Union labor in all Mexico is taking up the "dry" side of the issue.

The annual congress of the Mexican Federation of Labor, which will meet at Orizaba on May 1, will discuss prohibition along with industrial problems, and will send delegates to the conventions of the American Federation of Labor at Atlantic City in June and the Pan-American Federation of Labor at New York City in July.

A SPLENDID WAR RECORD.

From the outbreak of hostilities to October 31, 1918, the steamers of the Canadian Pacific Ocean Services have carried 1,041,000 troops and passengers all over the world, embracing all ports in China and Japan, Singapore, Bombay, Mesopotamia, Suez, Gallipoli, all ports in the Mediterranean, Colombo, Dar-es-Salaam, Delagoa Bay, Durban, and Mauritius, in addition to the West Coast of North and South America, and the United States and Canadian ports. The total loss of troops carried caused by enemy action and irrespective of disease has been eight in number. The Canadian Pacific flag has flown in the "highest North" in latitude 72 30 N. On one consecutive continuous voyage one of the company's vessels steamed 28,441 miles. Over 4,000,000 tons of cargo and munitions of war have been carried, in addition to many thousand horses and mules. The losses of the fleet have been comparatively small, largely due to the great devotion of the officers and crews of the ships. Over 300 officers and engineers were found out of the company's service for the British Navy.

Experts foresee the time when cinematography will be linked up with wireless telegraphy and other scientific inventions. Experiments are already being made with the telegraph—in America, needless to say. Quite recently a short film was telegraphed from Chicago to New York. It is easy to imagine the outcome of experiments in this direction. Events taking place at the ends of the earth may be shown on screens in London the day after they are enacted. There is no limit to the possibilities. Some authorities are anticipating the time when, by the employment of wireless rays, it will be possible to show a topical picture in a thousand different theatres at the moment of the actual occurrence.

A DEFENSE OF THE SEAMEN'S ACT.

(Continued from Page 2.)

act went into full effect that all seamen were set free in this country.

By act of Congress approved June 26, 1884, American shipowners were permitted to discharge a crew hired in an American port, employ another crew in the port in which his competitor hired his, come to the United States and go back to a foreign port without reshipping in the United States and thus escape the American wage rate. The crimping system was in full play, and the seaman was robbed. The forecastle, where he lived with men of all races, speaking languages he could not understand, inadequate as to space and ventilation, was a foul, disease-breeding place.

The wages were based on the lowest paid in any port he touched, and left him nothing for his family.

There was no prospect in such a life. No wonder the American left the sea. We can well understand why more than 60 per cent. of the officers and men in our merchant marine in 1915 were not citizens of the United States.

It was not until March 14, 1897, that Congress passed a law requiring that the forecastle must be improved. Every maritime nation had long since required the same thing.

The Seamen's act of March 4, 1915, was the first emphatic declaration by Congress that the rights and interests of our seamen should have recognition and be maintained. The old policy drove Americans off the ocean. It knocked our sea legs from under us.

The new policy is to call our men back and say to them. "You shall be treated as decent citizens; you are invited not only to a legitimate but an absolutely essential occupation, where your rights must be respected; you shall be assured of good living conditions, space in the forecastle shall be increased from 72 cubic feet per man to 120 cubic feet, with further provisions for health, cleanliness, and comfort; the crimping system is abolished; advance wages and allotments, by which seamen suffered great wrongs are prohibited; you are free men and can have one-half of the wages earned and not paid in ports of call, thus enabling you to protect your liberty."

A new day has dawned for American shipping, and greater opportunities than ever before have come to American boys on the sea and those old "salts" who cling to the life will rejoice to see it brighten, and all must realize that the officers and men in the American merchant marine are rendering unsurpassed service to their country.

Human life and property are in the hands of these men. The prosperity and even the safety of this country rests with them. They must know what to do in case of storm and danger. There is no mercy in the angry elements. There must be discipline without cruelty, control without tyranny, coolness without indifference, courage without recklessness.

I recall that when the "Titanic" was sunk the wireless operator who survived testified that he remained at his station until the sea washed him away as the ship went down by the bow. I asked him at the hearing why he did not get into a lifeboat or jump to some raft before then. He replied that the captain had told him to take his position by his apparatus and endeavor to send out distress calls as long as he could, and receiving no further orders he remained there until the ship went down. That is the kind of stuff the seafaring man, to succeed, must be made of.

American shipping has always heretofore been protected—absolutely protected—by prohibition. I understand "protection" means securing the home market. The importation of ships has been forbidden, and the use of foreign ships in the "home market" has been prohibited, and our coastwise trade has been reserved for home-built ships for nearly 100 years.

In Colonial times Virginia gave a subsidy of tobacco to induce her people to build ships, and they built one ship.

Massachusetts gave a bounty on Massachusetts oil—the fisheries were depressed, not helped.

Rhode Island paid a bounty on oil. Her sailors continued to favor the slave trade.

The effect of subsidies on the Collins Line was disastrous to shipping.

British shipping in the trade to the northern ports of America was not increased but restricted by the subsidy to the Cunard Co.

We tried subsidies after the Civil War—lines from New York to Rio, San Francisco to China, Japan, and Hawaii. It brought the beneficiaries into politics and helped not at all to build up a merchant marine.

In 1891 we passed a subsidy (mail) law. It brought in four ships, which never increased. The greatest commerce carrier is the tramp, which was never subsidized by any country.

The report of the Merchant Marine Commission says:

"The statistics of loss of ships at sea afford matter for reflection. They show . . . that out of every 100 American seagoing steamships over 100 tons, for the past 7 years, on the average 2.24 have been lost each year; that out of every 100 foreign seagoing steamers over 100 tons, for the same period, on the average 1.98 have been lost each year."

Mr. Spears, in his admirable work on "The Story of the American Merchant Marine," shows that "when American ships were supreme they were insured at a less rate than those of any other nation, and the insurance was placed, to a large extent, in England." That when "the American sailor of the sail was able to handle his ship better than any other he paid lower premiums to the underwriters. That the higher per cent. of losses means higher cost of insurance, and the cause is since the steamer era our sailor is less efficient in his work than our old-time sailor and less efficient, too, than the foreign steamship sailor of to-day. The superior intrinsic efficiency of the American sailor gave supremacy to the American flag." We must have our natural units (seamen) as efficient for this modern day as was our ship of the sail in the days long past. We can accomplish this by having efficient men to man our vessels. There is no difficulty in the way of building the ships.

Our day has come to make the "Starred Banner the talisman of a world commerce."

A BELATED PROTEST.

(Continued from Page 7.)

to secure freedom of the seas and lasting peace.

If the President's statements upon these or any other propositions were obscure or not acceptable, the honor and integrity of every one concerned, of every step in the march of events thereafter, cried to Heaven for a prompt declaration of that important fact.

ROBERT M. LA FOLLETTE.

In Siberia gold is an inexhaustible treasure. The Lena Gold Mining Company, which operates in the richest region, recovers the precious metal to a value of 2800 yen per area of six square feet. The principal field is a thousand miles northeast of Irkutsk, and the said company produces gold to the value of twenty million yen yearly. The best season for alluvial mining is between October and March.

The most pathetic thing in the world is the submission of the poor to poverty.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

FREEDOM OF THE SEAS!

The following excellent historical resumé on the "freedom of the seas," together with some original comment thereon, appears in the current issue of "Nauticus" of New York:

"Mankind," said Sir Leslie Stephen, "resents nothing so much as the intrusion of a new disturbing truth. The huge dead weight of stupidity and indolence is always ready to smother audacious inquiries." Now, for instance, that the war is over to all practical intents, a large section of mankind resents nothing so much as the intrusion of the disturbing truth that the emergency which set a fictitious standard of value is also over and that every member of the community must prepare to do his share toward preparing the readjustment process. That which but yesterday might have been thought great and noble will henceforth be judged by other standards and in the fulness of time there will be a return to the natural process of evolution under which the fittest are those who survive. In the turmoil of waste which is indissolubly associated with war there is no room for the cautious reasonings which make for real efficiency in normal times, but the acme of stupidity is to shut our eyes to the fact that immutable economic laws which have been put to the test of time can be changed permanently in conformity with the fictitious standards established in war time.

Bacon says somewhere that nothing is so disillusioning as letting in the light of common day upon such masques and shows of the poets as were intended to be seen by candle light. Likewise great is bound to be the disillusion of those who persist in thinking these days in terms of war. Transactions performed as it were under the lion's paw are not commercial transactions at all and the experience derived from them may just as well be thrown out into the dust bin at once. Those who profit by them are not better judges of values afterward than if they had not made fortunes by taking advantage of conditions which were not of their own making and the spirit that wins under such circumstances is not the cool judgment of the man who is able to weigh a number of conflicting factors, but that of the stock exchange gambler who puts upon prices either way. Such a man has no interest in the intrinsic merit of the stock which serves him as a pawn in the game. He cares only about what others will think so that he may take to cover in time and retire with a profit.

A moderating influence is needed as much by those at the head as by those who have derived their share of the false prosperity by taking advantage of the shortage in man power. Of late, enthusiasm and willingness to work mattered more than mere wages. Cost was a secondary consideration as long as each one did his work. Such conditions, however, can only be temporary. When human lives are at stake aught else counts for little and those at the rear may console themselves for being bereft of the excitation of the rough-and-tumble, with the thought that they are getting several times over what their services would be worth under normal conditions and that they derive therefrom an amount of credit which would never be vouchsafed them in the light of common day. Thus one illusion vanishes after another and people who were thought wonderful and mighty personages, now that they have returned to their ordinary avocations and have shed the lustre of office, look and talk just like everybody else and people wonder why they ever thought them to be different.

And so it comes to pass that the world is settling back into its own cradle and the factors that once made for commercial success are once more coming into their own. There was aforetime hope in certain quarters that the war would create a new order of things and that the magic wand of politicians would endow this or that set of men with the riches of the earth without a hard struggle for them. But like all beautiful dreams this one, too, has been shattered and the house of cards lies on the table ready for reassembling into the pack and reshuffling for a new deal. Those who expected that a paternal government would hand over to them the gold key of the commercial heaven, are finding that in the days to come they will be expected as of yore to worry and labor for the realization of their aims and that favors received at the hands of politicians are as insecure as those received at the hands of kings.

The much abused word "freedom" is never so maltreated as when used in connection with the trite expression "freedom of the seas." The most cursory glance into the pages of history will show how in the past the denial of freedom of the seas was based upon the desire to retain a trade with territories over which dominion was more or less illusory. Dutch, Spaniards, Britons and Frenchmen fought many bloody battles over the doctrine of *"Mare Clausum."* Grotius, in "Mare Liberum," was the first writer to perceive the intrinsic iniquity of denying freedom of navigation to any power. The Spaniards, be it said to their credit, never indulged in any hypocritical disquisitions about freedom. They wanted the sea, that is to say, the trade with America, for themselves and only gave up the attempt to enforce the restrictions on free navigation after their sea power had been irretrievably lost. The French, who claimed freedom for themselves, wanted it chiefly for the purpose of excluding rivals from the oversea trade with the metropolis and even in recent years have carried the principle of fiscal restrictions upon navigation—such as the imposition of a surtax on indirect imports—to a greater extent than any other power.

The Dutch were always the leading exponents of freedom—when their own interests were at stake. When they had the power they drove the English from the sea. Not for long, however. Still what brute force could not accomplish, cunning was able to win and thus the Dutch obtained exclusive trading rights from the Japanese, after the exclusion of the Jesuits. It used to be said that Dutch sailors landing in Japan were compelled to step on a cross and Voltaire in "Candide" says something about the old sailor who defines the extent of his journeys by saying: "I, too, have stepped upon the cross." Cromwell's Acts of Navigation, which hedged around the oversea commerce of Great Britain until 1842, were strictly in accordance with the spirit of their time. Neither Richelieu nor Cromwell had any idea that navigation with the newly-discovered territories should be permitted to those who were unable to guard their vessels with powerful men-of-war and the granting of trading monopolies by various potentates to commercial companies, such as the East and West India Companies, was but a corollary of the sentiment which could not perceive the viciousness of a system which circumscribed the trade of a nation within the limits of the natural shipping available, such shipping in turn being allowed to trade only by virtue of superior naval force.

It was but natural that when the English had obtained mastery of the seas in the 18th century, they should have abused it in the fashion of the period and that they should even have imposed restrictive measures upon their own people in America. The expectancy to rid themselves of the hateful Acts of Navigation was one of the most powerful incentives in enlisting the sympathy of New England merchants for the cause of separation from England. Independence once achieved, there was employment to be found for the American vessels which came into being and the war of the French Revolution afforded the opportunity. It was then that the handicaps imposed by the English Orders-in-Council in retaliation for Napoleon's decrees caused a universal demand to spring up in America for "Free Trade and Sailor's Rights." The abuse of the right of visit and search by British warships led to the war of 1812, but peace was signed at Ghent without mention of either.

The Napoleonic Wars so upset the economic balance of the United Kingdom that it was with difficulty that workmen could be induced to remain in Great Britain to work for the then princely wage of 6 shillings a day, when 12 and 14 shillings were offering on the Continent. Only in Great Britain could competent artisans be obtained, the drafts having killed or maimed most of the Continental workers. The inevitable outcome was unrest in England which culminated in the repeal of the monopolies and of the Corn Laws and finally of the Navigation Laws. By 1852, the last obstacle in the way of absolute freedom of trade had been swept off the English statute, and even the coastwise trade of the Kingdom was thrown open to foreign vessels. In the meantime as profound a change had taken place in the minds of British statesmen as to neutral rights in maritime warfare and the power which at the beginning of the century had insisted on searching neutral men-of-war now entered a protest because the Commissioners of the Confederacy had been removed from a British liner on the high seas by a Federal cruiser. President Lincoln surrendered the Confederate Commissioners willingly because, as he said, by demanding their release Great Britain had repudiated the stand which she had maintained from time immemorial and which had caused the war of 1812.

Had the United States consented to the application of the doctrine of "freedom of the seas," as it was interpreted in 1810—when American shipowners made easy fortunes by trading with the French—there would have been no Federal victory in the Civil War. However, the application of the doctrine of "ultimate destination" saved the day, and cargo after cargo bound from England or the Continent to Nassau and Bermuda was taken into the prize court and condemned. In the end the sea patrol had become so efficient and the blockade so tight that the blockade runners that had escaped capture were laid up and the complete command of the sea by the Federal Navy doomed the Confederacy just as similar conditions doomed Germany in the war now come to a close. Just the same, the United States at the beginning of the European War called into question the doctrine of "ultimate destination." innovated under the Administration

of Mr. Lincoln, when applied against American shipping.

International law, after all, is but a matter of expediency and it is the height of folly for any nation to cling slavishly to abstract doctrines purely on the ground of tradition. The expression "freedom of the seas" is a delusion and a snare, if by it it be implied that private property should be held immune from capture at sea in time of war, for the reason that private property on the land is at the disposal of an occupying military force and is therefore lost to the original owner, whether he recovers it later or not. To allow shipping to escape scot free would amount to giving it an advantage over property on the land which is subject to requisition and use by the invader. A day may come when nations will cease to invade each other and then property rights in time of war will not come into question. At present, however, the certitude of losses following the beginning of hostilities is likely to remain the strongest incentive for the preservation of future peace.

WEEKLY NEWS LETTER

(Continued from Page 3.)

tains the right to act under certain conditions.

"In an establishment where the practice had been uniform one way or another," said the umpire, "it was quite natural for the board to lay down the rule that the continuance of such practice during the war should not constitute a grievance, but where, as in this case, there had been an apparently arbitrary change, such change might well constitute a grievance."

A. F. of L. Reconstruction Plan.

The conventions of the American Federation of Labor, held since the declaration of war in 1914, instructed the Executive Council to call a labor peace conference of all nations at the time and place the peace conference is held by the belligerent nations, and that at least five delegates—one of whom shall be the president of the American Federation of Labor—be selected to participate in this conference.

The Executive Council selected Samuel Gompers, James Duncan, John A. Alpine, Frank Duffy and William Green to represent the American labor movement. It is expected that they will sail shortly for Paris.

The labor mission, composed of Samuel Gompers, John P. Frey, Charles L. Baine, William A. Bowen and Edgar Wallace, which visited England, France and Italy, attended the inter-allied labor conference held at London, September 17, 18, 19, 1918. The conference declared that in the official delegations from each of the belligerent countries which will formulate the peace treaty, the workers should have direct official representation; it also declared in favor of a World Labor Congress to be held at the same time and place as the peace conference that will formulate the peace treaty.

The American delegation submitted the following fundamental principles of the inter-allied conference, based upon the declarations of the conventions of the American Federation of Labor, which must underlie the peace treaty, in order that the sacrifices which were made to safeguard and realize for the peoples of all nations the benefits of democracy shall not have been in vain:

1. A league of the free peoples of the world in a common covenant for genuine and practical co-operation to secure justice and therefore peace in relations between nations.

2. No political or economic restrictions meant to benefit some nations and to cripple or embarrass others.

3. No reprisals based upon purely vindictive purposes, or deliberate desire to injure, but to right manifest wrongs.

4. Recognition of the rights of small nations and of the principle, "No people must be forced under sovereignty under which it does not wish to live."

5. No territorial changes or adjustment of power except in furtherance of the welfare of the peoples affected and in furtherance of world peace.

In addition to these basic principles there should be incorporated in the treaty which shall constitute the guide of nations in the new period and conditions into which we enter at the close of the war, the following declarations fundamental to the best interests of all nations and of vital importance to wage-earners:

1. That in law and in practice the principle shall be recognized that the labor of a human being is not a commodity or article of commerce.

2. Involuntary servitude shall not exist except as a punishment for crime whereof the party shall have been duly convicted.

3. The right of free association, free assemblage, free speech and free press shall not be abridged.

4. That the seamen of the merchant marine shall be guaranteed the right of leaving their vessels when the same are in safe harbor.

5. No article or commodity shall be shipped or delivered in international commerce in the production of which children under the age of 16 years have been employed or permitted to work.

6. It shall be declared that the basic workday in industry and commerce shall not exceed eight hours per day.

7. Trial by jury should be established.

Big Peace Casualty Lists.

"If an industrial casualty list were printed daily, as the war casualty lists are printed, the public would be appalled," said Lieut. Col. Harry E. Mock, of the Army Medical Corps, before a conference of industrial physicians and surgeons in Philadelphia.

"The casting of valuable workers on the scrap heap must cease," said Col. Mock. "With the cessation of immigration and the increased demands on our industrial resources America must conserve her man power if she intends to maintain her economic supremacy.

"This conservation may be accomplished by the prevention of accidents, by industrial hygiene and sanitation, by adequate medical and surgical care of disabled employes, and by adequate compensation during periods of disability and better living and working conditions."

Lewis T. Bryant, Commissioner of Labor for New Jersey, said the problem of caring for industrial cripples is just as important as the problem of caring for disabled soldiers.

Labor News

The War Industries Board announces the withdrawal of restrictions affecting the publication of all periodicals except daily and Sunday newspapers. It is stated that publishers of daily and Sunday newspapers have asked the board to control the use of news print paper for the present.

Officers of the Amalgamated Association of Iron, Steel and Tin Workers report that locals have been organized in Gary, Ind.; South Chicago, Ill., and Reading and Harrisburg, Pa. The first two unions compose employees of the powerful Illinois Steel Company and the Reading union is composed of employees of the Bethlehem Steel Corporation.

Delegates from all the Gulf States met in convention at New Orleans recently to form a Gulf District Marine Council of the various organized crafts engaged in building ships. Approximately 100 delegates, representing 40,000 men, were in attendance. A committee of three has been sent to Washington to perfect arrangements for obtaining the charter from the American Federation of Labor, and to look after other details incident to forming the organization.

The Seattle Central Labor Council's plans for the organization of a banking institution are reported to have been fully matured and the promoters are hopeful of being able to do business in the near future. The new enterprise will be known as the Trades' Union Savings and Loan Association. Its board of directors will be composed of a member from each of the unions holding stock. An effort is being made to interest the grange, farmers' unions and other friendly organizations in the new venture.

Universal workmen's health insurance, "including adequate cash benefit and medical care during temporary sickness, democratic management with full representation of labor, and the complete exclusion of commercial insurance companies," is urged as an immediate after-war measure of labor protection in a resolution just adopted by the International Union of United Brewery and Soft Drink Workers of America. This advanced action brings the total to more than forty prominent State and national labor organizations already on record in favor of health insurance laws.

The United States Senate has approved a bill assessing a tax of 10 per cent. on child labor by a vote of 50 to 12. The minority vote was cast by Southern Democrats. The new amendment was drawn after the decision of the Supreme Court invalidating the previous law and has the approval of the President. It provides that those who employ child labor "shall pay for each taxable year, in addition to all other taxes imposed by law, an excise tax equivalent to 10 per centum of the entire net profits received or accrued for such year from the sale of the products of such labor." The labor of children is prohibited in certain industries under 16 years and in others as low as 14. The action of the Senate is apparently a disapproval of the nullification by the Supreme Court of the previous child labor law.

A club within a club!

Existing clubs represent organizations already formed.

Why not propose, at the next meeting, that your club become a War Savings Society for the rest of the war?

Each member agreeing to buy at least one War Savings Stamp per month.

Besides the saving—

It becomes the popular thing to do with less; to make what you have last longer.

Incidentally, it gives the Government a better market wherein to purchase things for soldiers.

INFORMATION WANTED.

Members of the crew of the SS. "Brazos," which salvaged the SS. 'Iroquois," about March, 1918, should file, as soon as possible, with me, their claim for their share of the salvage money, or communicate with me at once, as I have noticed the case for trial, and confidently anticipate a verdict in the favor of seamen, for a considerable amount.

ISIDORE A. RABINOW,
Attorney for Seamen,
277 Broadway, Room 401,
New York City.

1-8-19

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted

Home News

At Louisville, Ky., a mass meeting was held under the auspices of the Railway Employees' Central Body, with fully 2,000 people in attendance, protesting against the return of the railroads to private ownership and operation.

Dr. Anna Howard Shaw, president of the American Woman Suffrage Association, has realized the fulfillment of a forty years' desire to be a policewoman by being sworn in as a special member of the police force of Washington, December 14.

Raising the fares on the Lewiston, Augusta & Waterville Street Railway from five to seven cents last summer so decreased the patronage that the revenue of the company became inadequate to meet operating expenses and a receivership has been decreed in the Superior Court.

The American Red Cross reports that 8,000,000 women volunteer workers in this country have made 291,000,000 necessary articles during the past seventeen months. This number included 253,196,000 surgical dressings, 14,089,000 knitted articles, 1,464,000 refugee garments, and 22,255,000 hospital garments and supplies.

The St. Louis Civic League has pledged itself to work for municipal ownership of public utilities, for the short and secret ballot, proportional representation in the city assembly, a non-partisan system of city elections, revision of the city court system, full and fearless publicity in regard to candidates for office and the immediate creation of a State constitutional convention.

In his annual report Attorney General Gregory made this reference to war organizations of self-styled patriots: "In handling local cases of sporadic propaganda or seditious utterances the department was badly handicapped by self-appointed committees or associations of citizens who, ignorant or dissatisfied with the Federal laws, sought to supplement them by extra legal measures."

Complete exemption from Federal inheritance and transfer taxes for corporations "organized and operated exclusively for religious, charitable, scientific, literary or educational purposes, including the encouragement of art and the prevention of cruelty to children and animals" has been written into the Federal Revenue bill as an amendment by the Senate Finance Committee.

One reason for high prices of fruit may be found in the financial report of the United Fruit Company, which shows a balance available for dividends of $19,990,496, equal to 39.72 per cent. on the outstanding stock. In 1917 the percentage earned on the stock was 26.72, so that for the two-year period the percentage of earnings was 66.44. In the last four years the surplus available for dividends has equalled 106.89 per cent.

William B. Colver, chairman of the Federal Trade Commission, told the House Interstate Commerce Commission at a hearing on the Administration bill to regulate the packing industry that if present methods were allowed to continue the wholesale grocery business on a competitive basis would disappear in five or six years, and that in ten or twelve years the retail grocers would be supplanted by a great chain of stores.

Domestic and Naval

The "Fred B. Balano" (3-mast. schr.), 215 tons reg., built at Port Clyde, Me., in 1890 and owned by B. M. Pike, Lubec, Me., has been sold to the Boston & New London Shipping Co. for about $20,000.

The "Herald" (4-mast. schr.), has been sold by the U. S. Marshal as she lies waterlogged at Tampa, Fla., for $4,000. The buyers are J. M. Harvey and C. T. Ansley. The lumber cargo brought $3,500. She will be repaired and put back in service.

The disarming of American steamers under the direction of the naval authorities is proceeding rapidly. Guns mounted for anti-submarine defense are being removed and sent to the navy yards.

San Francisco shipping men fear that the $12 a ton rate on copra announced between Liverpool and Calcutta may eliminate that city from the copra trade. The rate from San Francisco to Calcutta is $60, or five times the British rate, while the rate from New York to Calcutta is $45 a ton.

The consummation of the purchase by the United States Government of the North German Lloyd and Hamburg American docks at Hoboken is expected shortly. These docks were commandeered when this country entered into war with Germany. The Government owns other docks in New York harbor.

Henry Ford has purchased 300 acres of land opposite Troy, Albany Co., N. Y., for, it is believed, building boats for the State Barge Canal. The report is that the boats will have a carrying capacity of 1500 tons and some of them will be motor-driven. The boats will be employed in carrying uncompleted parts from the Dearborn plant to the Ford plants located on the Passaic River between Jersey City and Newark.

When the Shipping Board was formed there were 14 shipyards on the Great Lakes, with 75 ways. Now there are 21 yards, with 110 ways and 15 ways building. According to the latest figures there are 31,002 employees in the 21 yards on the Lakes. The total launchings in the yards which comprise the Great Lakes District, since August, 1917, to November 1, number 181. The total number of keels laid in the district in the same period number 258. Deliveries up to November 1 comprised 160 steel steamers of 534,535 tons deadweight.

The concrete ship "Atlantus," recently launched at Oglethorpe Bay, Ga., by the Liberty Shipbuilding Co., as agents for the Emergency Fleet Corporation, is of approximately 3000 tons capacity on a length of slightly above 260 feet and 1400 i.h.hp. She was launched end-on. Her lines follow the type built on the Great Lakes but with machinery amidships. The tests made upon launching showed a maximum stress of 3000 pounds per square inch on the steel reinforcement. The Emergency Fleet News is authority for the statement that the actual cost of the "Atlantus" was considerably in excess of the original estimate. The ship has a five-inch wall of reinforced concrete and the aggregate used in the concrete consists of burnt clay weighing 110 pounds per cubic foot, as against 150 pounds for crushed stone and gravel. The hull was cast in one week.

INFORMATION WANTED.

In Re Argonaut vs. Jason: Members of the crew who have retained me are advised that the underwriters have given me positive assurance that they will be treated fairly in adjusting this salvage claim. That the delay is caused by their inability to ascertain who are the owners of the cargo and its value at the time delivered abroad and when the salvage was performed. There is no action that I can take that would hurry the matter. Said they are acting in good faith.

The Public
A Journal of Democracy
Poverty is A Crime!
It isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was
"The Crime of Poverty"
It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.
Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.
Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

News from Abroad

The British Air Board has drafted articles for an international air agreement to be submitted to the Allies. The draft is accompanied by the suggestion that an international air conference be convened.

The casualties of the Austro-Hungarian armies from the beginning of the war up to the end of May, 1918, were slightly over 4,000,000, according to official statistics received from Vienna. Eighteen Generals out of 310 were killed.

A combination of the Business Men's Efficiency Leagues and the Prohibition organizations of New Zealand have presented a petition to Parliament, in favor of a poll on their proposal to abolish the liquor trade and pay as compensation £4,500,000.

It is planned to form a Chinese-American Society, whose aim it will be, according to Mr. John K. Sague, its leader, to "prevent selfish exploitation of China either by individuals or by nations and to assure her that she has a firm friend in the United States."

Various foreign governments have cancelled their orders with American manufacturers for war steel. These cancellations included an order by Italy covering 65,000 tons of barbed wire and another by Great Britain for 22,000 tons. The French Government authorities notified American manufacturers to hold up work on the 50,000-ton order for barbed wire covering delivery during the first half of 1919. The same buyers asked also that a 30,000-ton contract for wire rods should be held up until further notice.

There are 15,000 more British prisoners in Germany than the British records show, so that a number of men previously given up as dead or missing will return to their homes, it was stated in London. The British had contemplated getting the last 20,000 prisoners out of Germany within a fortnight, but the German records show that there remain in German hands 35,000 men, of whom 15,000, through the failure of the Germans to report their capture and the men's failure to communicate with friends, had been listed as dead.

Gradually the news of German conditions is filtering through to us from various channels. From official statistics recently received in this country it appears that the birth rate in 1915 was 40 per cent. less throughout Germany than it was in 1913, and the infant death rate was 20 and 30 per cent. of the births. Owing to the scarcity of food, there appeared a special type of "war infants," weight from three to five pounds, undernourished, puny and with wrinkled skin. At the infant welfare center at Charlottenburg, 23 per cent. of the children were rachitic, and at Treves, the rachitic children averaged 43 per cent. Owing to the poor quality of food and the general sparse diet, the average weight of both men and women was greatly reduced. This reduction of weight was especially injurious to the women, in whom the loss of fat caused floating kidney and a prolapse of the abdominal organs. Many of the food substitutes caused gastric irritations and a great increase in gastro-intestinal disease. The real extent of health deterioration due to war conditions will probably not be known for some time if ever.

With the Wits

"Have you got a lawyer looking after your interest?"

"Nominally; but I rather think he has his eye on my principal."—Boston Transcript.

"Then we're engaged?"

"Of course."

"And am I the first girl you ever loved?"

"No, dear, but I'm harder to suit now than I used to be."—Kansas City Journal.

"Somebody should stand up for the street railways," exclaimed the man who believes in fair play.

"Sir," exclaimed the protesting citizen, "as a passenger I have stood up for them twice a day for years."—Washington Star.

Bill—He was always great for loafing around home.

Gill—Well, he hasn't got over it yet. When he plays baseball he always waits to have the limit number of balls and strikes called on him.—Yonkers Statesman.

"I see you a good deal with young Flubdub."

"Yes, auntie."

"I hope you are not going to marry a spendthrift."

"Oh, no, I don't think I'll marry him. But it's nice going around with one."—Louisville Courier-Journal.

"Remember, son, Garfield drove mules on a tow-path and Lincoln split rails."

"I know, dad; but say, did any of these Presidents ever crank a cold motor in a blizzard for half an hour before he discovered that he didn't have any gasoline?"—Richmond Times-Dispatch.

Sufferer—I have a terrible toothache and want something to cure it.

Friend—Now, you don't need any medicine. I had a toothache yesterday, and I went home and my loving wife kissed me and so consoled me that the pain soon passed away. Why don't you try the trick?

Sufferer—I think I will. Is your wife home now?—Vancouver Daily Province.

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

257 HANSFORD BLDG., 268 MARKET STREET

Under Capt. Christensen's personal and undivided supervision, pupils of this favorably known school are taught all up-to-date requirements for passing a successful examination before the U. S. Inspector.

THE SEAMEN'S JOURNAL.

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 19. SAN FRANCISCO, WEDNESDAY, JANUARY 15, 1919. Whole No. 2521.

A "FIVE TO FOUR" DECISION.

By a Majority of "One" the U. S. Supreme Court Decides Against Seamen.

The Supreme Court of the United States has just rendered an opinion on three cases of special concern to the seamen of America. All three of these cases were, in fact, carried to the highest court of the land at the instance of the International Seamen's Union of America.

The vote on the cases involving the payment of wages was decided against the Seamen by a mere majority of "one." The third case, relating to the constitutionality of the Seamen's Act was dismissed on a technicality.

The majority and minority opinions in the "Talus" case, preceded by explanatory comment, are reprinted herewith, in full.

It is most significant that the Supreme Court of the United States is divided four to five on every case brought so far, involving the Seamen's Act.

First, there was the "Chelentis" case, involving Section 20 of the Seamen's Act, which purported to abolish the fellow-servant rule. The decision of the majority of the court in that case is one that has been much criticized by members of the bar and there is a consensus of opinion that the Supreme Court will sooner or later find occasion to modify if not overrule that decision. It is by no means final.

Then followed the Abdu-Nigretia case, and again there were dissenting opinions. This case involved the right of seamen to appeal to higher courts, without the prepayment of fees. Congress by an amendment to that act promptly cured the alleged defect pointed out by the Supreme Court of the United States.

In the Rhine-Windrush and "Talus" cases, the decision as to validity of advances made in foreign ports on American and foreign vessels, was evidently based solely on the ground that Congress had not sufficiently expressed its intention on that subject. The five Justices who rendered the majority opinion admit in other words, that advance notes and contracts to pay advance notes are contrary to the public policy of the United States when made within the United States. They admit that Congress can make any rule or regulation it sees fit as to foreign vessels, in the absence of treaty provisions, and that such regulations are binding upon such foreign vessels as a condition of entry. This was a point ably argued by the Attorney-General.

Mr. Justice Day, who delivered the majority opinion of the Court, says that from the records of the committees in Congress and the wording of the statute, they fail to find evidence of an intention to affect advances made in foreign countries where such advances are lawful. The remedy is evident. An amendment of the Act by Congress inserting after the word "advance," "whether made in foreign ports or domestic ports" or some such words, will cure it and no further litigation on the statute will be necessary or possible.

So it would seem that the work has not all been in vain, and in spite of defeat, the organized seamen are making law and are progressing.

Certain it is, that the people of the country are coming to a realization of the importance of a merchant marine and the impossibility of getting native seamen to work under conditions that have heretofore prevailed on board the average tramp steamer. A general acceptance of this viewpoint is essential before we can hope to maintain a powerful merchant marine as an auxiliary to our navy in time of war, and as a means of transporting our commerce in time of peace.

Attorney Silas Blake Axtell, who together with Messrs. Waguespack, Howard and the Attorney-General, argued the cases before the Supreme Court, calls attention to the fact that the question of validity of advances as it affects the purpose of Section 4530, to wit: equalization of wages, will be wholly overcome when a true interpretation of Section 4530 is made. If the Supreme Court, when the case comes before them, decide that what was intended by Congress was to equalize wages, that Congress intended to give seamen under the amendment, when it changed the word "due" to "half wages earned" as much as, not less than the seamen had before, then it is immaterial whether advances are recognized as valid payments or not, for the seaman can always then demand one-half of the balance of wages due and not paid at the date of the demand, provided the ship has entered the port for the purpose of loading or discharging cargo, and further provided the demand is not made oftener than once in five days. This is the great question that has been incorrectly decided in the case of Nellman vs. London, 241 Fed., 863, which is bound to come before the Supreme Court for final determination within a few months.

Hence there need be no discouragement over the result of these cases. The fight has been intelligently and conscientiously conducted. Andrew Furuseth, president of the International Seamen's Union of America, is fully aware of everything that has been done and is going on. He was satisfied that the cases were properly briefed and argued before the Supreme Court of the United States and so expressed himself.

As stated in the introductory, the third case, relating to the constitutionality of the Seamen's Act, was dismissed on a mere technicality. The Supreme Court apparently did not care to finally pass upon the case, perhaps in view of the negotiations of the Peace Congress or for other reasons. At any rate, they saw fit to send the certificate which had presented the question of constitutionality before them, back to the United States Circuit Court of Appeals for the 5th Circuit. It is now up to counsel to proceed to try the cases there or again have the question certified up with the complete record.

In analyzing Supreme Court decisions on the Seamen's Act it should always be borne in mind that the change of the status of the seaman made by that law has been so revolutionary, that it is not surprising that our Courts have been slow to recognize it or accord their decisions and actions to its purpose and intent. But purpose and intent still live and are as vital as ever.

Majority Opinion in "Talus" Case.

SUPREME COURT OF THE UNITED STATES.

No. 392.—October Term, 1918.

Erik Sandberg, Carl Jannson, S. K. Benjaminsen and John Peranen, Petitioners, vs. John McDonald, Claimant of the British Ship "Talus."

On Writ of Certiorari to the United States Circuit Court of Appeals for the Fifth Circuit. [December 23, 1918.]

Mr. Justice Day delivered the opinion of the Court.

This case brings before us for consideration certain features of the so-called "Seaman's Act." (38 Stat. 1165.) The Act is entitled: "An Act to promote the welfare of American seamen in the merchant marine of the United States; to abolish arrest and imprisonment as a penalty for desertion and to secure the abrogation of treaty provisions in relation thereto; and to promote safety at sea." It contains numerous provisions intended to secure better treatment of seamen, and to secure for them better conditions of service.

The libel charges a demand in Mobile, Alabama, for one-half part of the wages then earned by the seamen, and the refusal of the master t opay the amount which the libelants claimed to be due. The master paid each of them what he conceived to be due, deducting certain advances made to the men at Liverpool, England, where the seamen were signed.

The facts are:

The "Talus" is a British ship and the libelants and petitioners citizens or subjects of nations other than the United States and at the time of employment by the ship and before boarding her they received certain advances at Liverpool by the ship or its agents, a practice usual and customary and not forbidden by the laws of Great Britain. The advance did not, as to any libelant, exceed the amount of a month's wages.

The libelants boarded the ship at Dublin, Ireland, December 1, 1916, and remained in her service until they left her at Mobile, Alabama.

The ship arrived in American waters on February 11, 1917, off Port Morgan, from

whence he proceeded immediately to Mobile, where she remained until after February 24, and unloaded and loaded cargoes. During the voyage and at Mobile prior to February 22, libelants received certain payments from the ship in cash and in articles purchased from it.

On February 22 libelants demanded of the master of the ship payment of one-half of the wages earned by them to that date. The master then paid to them a sum which, with the cash paid them and the price of the articles purchased as stated above, together with the advances made in Liverpool, equaled or exceeded the one-half of the wages then earned by each of them from the commencement of his service for the ship. It was less, however, than such one-half wages if the advances at Liverpool had not been included in the credits. The master claimed that those advances should be deducted from the one-half wages, and did deduct them, and the sum or sums paid by the master to the libelants exceeded the amount of wages earned by them for the eleven days the ship had been in American waters. The libelants quit the ship February 24, 1917, and were logged as deserters on the same day.

Under the foregoing statement of facts the question for decision is: Was the master entitled to make deduction from the Seamen's pay in the amount of the advancements made at Liverpool? The District Court held that these advancements could not be deducted (242 Fed., 954). The Circuit Court of Appeals reached the opposite conclusion (248 Fed., 670). The petinent section of the Act for consideration reads:

"Sec. 10 (a) That it shall be, and is hereby, made unlawful in any case to pay any seaman wages in advance of the time when he has actually earned the same, or to pay such advance wages, or to make any order, or note, or other evidence of indebtedness therefor to any other person, or to pay any person, for the shipment of seamen when payment is deducted or to be deducted from a seaman's wages. Any person violating any of the foregoing provisions of this section shall be deemed guilty of a misdemeanor, and upon conviction shall be punished by a fine of not less than $25 nor more than $100, and may also be imprisoned for a period of not exceeding six months, at the discretion of the Court. The payment of such advance wages or allotment shall in no case except as herein provided absolve the vessel or the master or the owner thereof from the full payment of wages after the same shall have been actually earned, and shall be no defense to a libel suit or action for the recovery of such wages. If any person shall demand or receive, either directly or indirectly, from any seaman or other person seeking employment, as seaman, or from any person on his behalf, any remuneration whatever for providing him with employment, he shall for every such offense be deemed guilty of a misdemeanor and shall be imprisoned not more than six months or fined not more than $500.

* * * * *

"(e) That this section shall apply as well to foreign vessels while in the waters of the United States, as to vessels of the United States, and any master, owner, consignee, or agent of any foreign vessel who has violated its provisions shall be liable to the same penalty that the master, owner, or agent of a vessel of the United States would be for a similar violation.

"The master, owner, consignee, or agent of any vessel of the United States, or of any foreign vessel seeking clearance from a port of the United States, shall present his shipping articles at the office of clearance, and no clearance shall be granted any such vessel unless the provisions of this section have been complied with."

The genesis and history of this legislation is found in U. S. Compiled Statutes, 1916, volume 7, section 8323 annotated.

The Dingley Act of 1884 (23 Stat., 55, 56), which is the origin of this section, contains terms much like those found in this Act. That statute, as the present one, in aspect now before us, was intended to prevent the evils arising from advanced payments to seamen, and to protect them again a class of persons who took advantage of their necessities and through whom vessels were obliged to provide themselves with seamen. These persons obtained assignments of the advanced wages of sailors. In many instances this was accomplished with little or no service to the men who were obliged to obtain employment through such agencies. In the Dingley Act it was made unlawful to pay seamen's wages before leaving the port at which he was engaged. In the present Act it is made unlawful to pay seamen's wages in advance of the time when he has actually earned the same. The Act of 1884 by its terms applied as well to foreign vessels as to the vessels of the United States, and masters of foreign vessels violating the law were refused clearance from any port of the United States. The present statute is made to apply as well to foreign vessels while in the waters of the United States as to vessels of the United States.

In the present Statute, in the section from which we have just quoted, masters, owners, consignees, or owners of foreign vessels are made liable to the same penalties as are the like persons in case of vessels of the United States. Such persons in case the vessels are those of the United States or foreign vessels, seeking clearance in ports of the United States, are required to present their shipping articles at the office of clearance, and no clearance is permitted unless the provisions of the statute are complied with.

The Act of 1884 came before the United States District Court for the Southern District of New York in the case of The State of Maine, 22 Fed., 734. In a clear and well-reasoned opinion by Judge Addison Brown the law was held not to apply to the shipment of seamen on American vessels in foreign ports. After some amendments in 1898, not important to consider in this connection, the matter came before this Court in the case of Patterson v. Bark "Eudora," 190 U. S., 169, and it was held to apply to a British vessel shipping seamen at an American port, and, furthermore, that the Act, as thus applied to a foreign vessel in United States waters, was constitutional.

While the Seamen's Act of 1915 contains many provisions for the amelioration of conditions as to employment and care of seamen, in the aspect now involved we have called attention to the state of legislation and judicial decision when that Act was passed. Did Congress intend to make invalid the contracts of foreign seamen so far as advance payments of wages is concerned, when the contract and payment was made in a foreign country where the law sanctioned such contract and payment? Conceding for the present purpose that Congress might have legislated to annul such contracts as a condition upon which foreign vessels might enter the ports of the United States, it is to be noted, that such sweeping and important requirement is not found specifically made in the statute. Had Congress intended to make void such contracts and payments a few words would have stated that intention, not leaving such an important regulation to be gathered from implication. There is nothing to indicate an intention, so far as the language of the statute is concerned, to control such matters otherwise than in the ports of the United States. The statute makes the payment of advance wages unlawful and affixes penalties for its violation, and provides that such advancements shall in no cases except as in the Act provided, absolve the master from full payment after the wages are earned, and shall be no defense to a libel or suit for wages. How far was this intended to apply to foreign vessels? We find the answer if we look to the language of the Act itself. It reads that this section shall apply to foreign vessels "while in the waters of the United States."

Legislation is presumptively territorial and confined to limits over which the law-making power has jurisdiction. American Banana Company v. United Fruit Company, 213 U. S., 347, 357. In Patterson v. Bark "Eudora," supra, this Court declared such legislation as to foreign vessels in United States ports to be constitutional. We think that there is nothing in this section to show that Congress intended to take over the control of such contracts and payments as to foreign vessels except while they were in our ports. Congress could not prevent the making of such contracts in other jurisdictions. If they saw fit to do so, foreign countries would continue to permit such contracts and advance payments no matter what our declared law or policy in regard to them might be as to vessels coming to our ports.

In the same section, which thus applies the law to foreign vessels while in waters of the United States, it is provided that the master, owner, consignee, or agent of any such vessel, who violates the provision of the act, shall be liable to the same penalty as would be persons of like character in respect to a vessel of the United States. This provision seems to us of great importance as evidencing the legislative intent to deal civilly and criminally with matters in our own jurisdiction. Congress certainly did not intend to punish criminally acts done within a foreign jurisdiction, a purpose so wholly futile is not to be attributed to Congress, United States v. Freeman, 239 U. S., 117, 120. The criminal provision strengthens the presumption that Congress intended to deal only with acts committed within the jurisdiction of the United States.

It is true the Act provides for the abrogation of inconsistent treaty provisions, but this provision has ample application treating the statute to mean what we have here held to be its proper construction. It abolishes the right of arrest for desertion. It gives to the civil courts of the United States jurisdiction over wage controversies arising within our jurisdiction. These considerations amply account for the treaty provision. See Treaties in Force, Ed. 1904, index p. 969.

It is said that the advances in foreign ports are against the policy of the United States and, therefore, not to be sanctioned here. As we have construed this section of the statute, no such policy as to foreign contracts legal where made, is declared.

We have examined the references in the briefs of counsel to the reports and proceedings in Congress during the progress of this legislation so far as the same may have weight in determining the construction of this section of the Act. We find nothing in them, so far as entitled to consideration, which requires a different meaning to be given the statute. We may add that the construction now given has the sanction of the Executive Department as shown in Instructions to Consular Officers, promulgated through the medium of the State Department.

We are of opinion that the Circuit Court of Appeals reached the right conclusion as to the meaning and interpretation of this section of the Act, and its judgment is affirmed.

A true copy.

Clerk Supreme Court, U. S.

Minority Opinion in "Talus" Case.

SUPREME COURT OF THE UNITED STATES.

No. 392.—October Term, 1918.

Erik Sandberg, Carl Jannson, S. K. Benjaminsen and John Peranen, Petitioners, vs. John McDonald, Claimant of the British Ship "Talus."

On Writ of Certiorari to the United States Circuit Court of Appeals for the Fifth Circuit. [December 23, 1918.]

Mr. Justice McKenna, with whom concur Mr. Justice Holmes, Mr. Justice Brandeis and Mr. Justice Clarke, dissenting.

This is a libel in admiralty under the Seamen's Act of 1915 (38 Stat., 1165-1168), especially involving Sec. 11.

The libel was filed by petitioners here and others. It was dismissed as to the latter and they have acquiesced in the judgment. The facts are set out in the opinion of the Court.

With this case were submitted others that present the act of Congress in different aspects. Among these was No. 361. It was a libel by a seaman who had shipped on a British vessel and was based on a demand for wages not due at the time of the demand under the terms of the shipping articles signed by him. Section 4 of the act, infra, was especially involved in consideration and its constitutionality was attacked by the ship. The Circuit Court of Appeals for the Fifth Circuit, to which the case had gone, presented the question to this Court in two aspects, first generally, and, second, more particularly that provision which makes the section "apply to seamen on foreign vessels while in the harbors of the United States."

In the present case the ship is also British and the libelants and petitioners citizens or subjects of nations other than the United States, and the controversy is as to the right of the master to deduct from the wages, of which the law authorizes the demand, advances made to the seamen in Liverpool, England. To make such advances was a practice usual and customary and not forbidden by English law. It would seem, therefore, that the constitutional question is as much involved in one case as in the other. But under the Court's construction of the act that question can be pretermitted. Under our constitution it would seem to be not only of ultimate but of first insistence. The court, however, is of opinion that the question of the constitutionality of the act was not certified in such manner as to be subject to its consideration. From that conclusion we are not disposed to dissent and shall assume, as the Court does, that the legislation is valid and pass to its consideration.

The instant case, the facts not being in dispute, is brought to the question of the right of the master to deduct the Liverpool advances, the ship asserting the right and the libelants denying it. The solution of the question necessarily depends upon the construction of the act, or, more precisely, its application. It is conceded, yielding to the authority of Patterson v. The Bark "Eudora," 190 U. S., 169, that the act applies to American seamen shipping in an American port upon foreign vessels, but it is contended from that case and other cases that it ought "to seem plain on principle and authority that the advancement statute has no effect except upon advancements made to seamen within the territorial jurisdiction of the United States. And, indeed, it is insisted that Congress "ex industria in terms confined the application to the waters of the United States." The conclusions are deduced from the cases which are reviewed and the language of the act is quoted. We give the quotation as it amplifies the contentions:

"That this section shall apply as well to foreign vessels **while in waters of the United States** [counsel's emphasis], as to vessels of the United States, and any master, owner, consignee or agent of any foreign vessel who has violated its provisions, shall be liable to the same penalty that the master, owner, or agent of a vessel of the United States would be for similar violation.

"The master, owner, consignee or agent of any vessel of the United States, or of any foreign vessel seeking clearance in a port of the United States, shall present his shipping articles at the office of clearance, and no clearance shall

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Federal Wage Rates Below Living Line.

In a letter to Speaker Clark of the House of Representatives Secretary of the Treasury McAdoo recommends a minimum wage of $5 a day for inspectors of customs, with correspnding increases to other employes in the Customs Service.

An investigation shows that the average wage of employes in this department advanced during the period from 1885 to 1914 from $1245 to $1290. This means that during the period of thirty years the increase made in the entire Customs House Service was less than 4 per cent. During the same period the cost of living increased more than 50 per cent.

This year Congress granted an additional 5 per cent. on wages of $1200 or more, and 10 per cent. on those under $1200, but attention is called to the fact that during the period between 1914 and 1918 the cost of living increased 50 per cent. In other words, during the period between 1885 and 1918 the cost of living has increased at least 100 per cent., whereas the average wage in the Customs Service has advanced less than 12 per cent.

"During the period of the war," says Secretary McAdoo, "it has been possible in some instances, through appeals made to the men on purely patriotic grounds, to prevail upon them to remain at their posts, though at a great personal sacrifice on their part. Now that the war contingency has passed and patriotism can no longer be used as a wedge to keep them in Government employ, there is every likelihood that unless some inducement is offered to retain employes who, by reason of their special qualifications have made themselves almost indispensable in certain branches of the customs machinery, the Customs Service will be so seriously crippled by reason of their separation therefrom that it will be some time before the service has again reached that standard of efficiency and economy that at present obtains."

Vicious Speed-Up System.

At a meeting of the Chicago Federation of Labor one delegate called attention to a vicious speed-up system employed by the Pullman Car Company.

"They put the check and watch system on every employee in their great works," said the trade unionist. "They put the stop-watch on the most able-bodied man in their employ, set him up as an example and then expect all the others to keep step with him. In this way they destroy the very life and soul of the weaker members. They have a checker over every action of the hand. They have a pension system so that after you have worked in the Pullman shops 20 years you are given $10 to $12 a month when you reach your sixty-fifth year. So as not to lose out on this pension old and decrepit persons stand for all sorts of indignities."

Snob Educator Scored.

The Associate Teachers' League, affiliated with the American Federation of Labor, is opposed by P. A. Capdau, president of the New Orleans School Board, who is charged by the teachers with possessing a "retroactive spasm of refinement." This broadside was followed by the appointment of a publicity committee to acquaint citizens with their purpose. In an address to the teachers, the chairman of the committee said:

"There is a distinction between a democratic idea of self-government and the idea of subserviency and sycophancy.

"It is your duty to think and act for yourselves, not to follow anybody blindly—not even the school board. There are a lot of people whose social position is so frail and so fragile that they cannot look at the man in a blue shirt without being disturbed. Our business is to upbuild character: no teacher who is sure of his or her professional status is a snob."

Contentment is Stagnation of Progress.

At a Reconstruction Conference called to consider industrial relations and kindred subjects now prominently in the public mind, attended by representatives of various large interests as well as men who are students of social and economic problems, President Samuel Gompers, American Federation of Labor, gave voice to the following thoughts upon the grave dangers confronting the American people:

"To get the men to respond to the call to arms in defense of our republic and our institutions required much effort, but it was not difficult of accomplishment. To persuade our civilian population to do service behind and for the men at the fighting front, was difficult, but not so difficult, as are the problems before us to-day.

"I am not one who believes that the wisest and best condition of the people is what is generally understood by contentment. Contentment, in my way of thinking, is stagnation. A healthy discontent is the awakening of the aspiration for better things. It is essential to-day that the people of our country shall be alert to all that is transpiring and all that is impending. Thus far we have lived our lives alone and worked out our own destinies along the line of the policies we believed to be the best for us. To-day, after either winning the war or helping to win the war, we are to have our representatives around a table where a treaty of peace is to be formulated.

"The representatives of no one government can have the controlling voice. Optimist as I am, I never fail to look upon the other side of the shield. Hoping for the best always, and striving as best I can to accomplish the right, or to help accomplish the right, I know the game played by the opponents of right. The democratic legislation erected by the Congress of the United States, by the several States of our Union, by our municipalities, granting greater freedom of thought and action of a voluntary character, the understanding of what here we mean by sovereignty of citizenship and of the man and of the woman, a conception not held by any other country on the face of the globe—I appeal to

World's Workers

Women have been admitted to full membership on the same terms as men by the Incorporated Auditors and Accountants of England by a big majority vote.

Juan Justo, Socialist leader in the Argentina Chamber of Deputies, and his colleague, Detomasso, have been appointed by the Socialist party to attend the coming International Socialist congress in Europe.

A general strike is on in Cuba. It was precipitated as a sympathetic walkout to aid the railroad workers on the Cuba Railroad. Although the railroad workers won, the general strike continues, the demands being largely of a political and not of an economic nature. The abolition of compulsory military service, and the abrogation of laws permitting the deportation of "foreigners" who are "agitators" are demanded. The employers now threaten American intervention.

The laborites of Winnipeg made a clean sweep of all the offices in the city, including the entire municipal, in the December elections. The Mayor is a member of the International Association of Machinists, as are four of the eight councillors. The other four are members, respectively, of the Sheet Metal Workers, the Brotherhood of Blacksmiths, the Carpenters and Joiners, and of Painters and Paper Hangers. Among the aldermen are a teamster, a member of the Typographical Union, and the Secretary of the Local Trades and Labor Assembly.

As a result of an appeal to the labor movement of Canada, initiated by the Trades and Labor Council of Vancouver, B. C., a resolution against intervention by Canada in Russia's internal affairs has been passed by Canada's three largest central labor bodies of unions affiliated with the American Federation of Labor, viz., the Winnipeg Trades and Labor Council, the Toronto District Labor Council, and the Vancouver Trades and Labor Council. A demand for a withdrawal of troops was made at a largely attended convention of the Quebec section of the Labor Party of Canada, in Montreal.

Labor unions throughout the United Kingdom are agitating for a 44-hour week. This would mean eight hours a day on five days of the week and four hours on Saturday. The National Transport Workers' Federation has presented to all the municipal and privately-owned tramways a demand for a working week of 44 hours at the present weekly wages. Representatives of the Federation of Engineering and Shipbuilding trades and representatives of the employers recently held a meeting at which it was decided that a 44-hour week without any reduction in existing wages constituted a reasonable attempt to readjust working conditions. An agreement was entered into between the employers and the men providing that the unions should make all effort to insure that in the unsettled state through which the country has to pass, the greatest possible output should be maintained. The compromise of a 44-hour week has been passed upon by the Engineering and Shipbuilding Union and a count of the ballot shows it was accepted by 286,545 to 146,526.

INFORMATION WANTED.

H. Lincoln, who was seaman on the bark "Mashulu," when boatswain John Wallin was hurt at Melbourne, on January 29, 1918, will please communicate with F. R. Wall, 324 Merchants' Exhange Bldg., San Francisco. 1-8-19

Members of the crew of the SS. "Fred W. Weller," at the time she salvaged the Norwegian barque "Gra-in," November, 1918, should file their claim with me, as soon as possible, for their share of the salvage money, which I am taking up now on behalf of other members of the crew. ISIDORE A. RABINOW,
Attorney for Seamen,
277 Broadway, Room 401,
New York City.
1-8-19

Pacific Coast Marine.

The United States Shipping Board has notified the William Dimond & Co. that they will be assigned the operation and management of another vessel for a voyage to New York via the Panama Canal. The sailing will be January 15.

John A. Fowler, recently appointed trade commissioner for the Dutch East Indies and the Malay Peninsula, left San Francisco during the week to take charge of his work there. Fowler was formerly a newspaper correspondent in China and Siberia.

Inquiry into the loss of the steamer "Princess Sophia" in Lynn canal October 25, 1918, will begin before Justice Morrison at Victoria, B. C., about February 10, as the result of a conference between the Commissioner and legal interests representing Yukon Territory, British Columbia, and relatives of some of the victims. Three attorneys, former members of the Yukon bar, have been designated to represent the Yukon Territory officials at the inquiry.

President John H. McCallum of the Board of State Harbor Commissioners recently announced the appointment of an advisory committee whose membership will confer with the Board regarding all matters pertaining to the exporting and importing business of the port. The members of the committee represent all phases of "capital" engaged in at the port, including exporting, importing, shipping, shipowners, warehouses and drayage. "Labor" is not represented!

Thomas T. P. Whitelaw of San Francisco is constructing a non-sinkable barge. This is a novel construction and is attracting much attention. It is intended to lift a dead-weight of fifty tons such as big anchors, boilers and other equipment that may have been lost overboard, or parts of a wreck. The bottom of the hull is lined with cork and a number of tanks also are located in the structure. There is a well in the middle and the lines or hawsers will pass through this to the object to be lifted. Hydraulics will do the lifting.

A bill authorizing preliminary steps in the direction of leveling Hunter's Point peninsula (on San Francisco bay), filling adjacent tidelands and making a new industrial tract of 2000 acres, has been drafted by the Civic League of Improvement Clubs and will be presented to the California Legislature. It is proposed to create a Peninsula Water Front Board consisting of the President of the State Harbor Commission, the City Engineer of San Francisco and the County Surveyor of San Mateo County to direct the work. An appropriation of $50,000 would cover preliminary planning.

A small boat containing three members of the crew of the British steamer "Kestrel" was picked up in mid-ocean by the United States Army transport "Thomas" hundreds of miles from Honolulu, according to a wireless received from the troopship at the Hawaiian port. The "Thomas" is en route from Vladivostok to San Francisco. The "Kestrel" is a small steamer engaged in the copra trade between Honolulu and Fanning Island and arrived at the island port recently, reporting that the small boat and three men were adrift somewhere and had been lost. The steamer ran short of fuel and burned one-half of the copra cargo as fuel.

According to a decision made by C. W. Cook before he resigned as assistant director of operations of the Shipping Board, the owners of the motor-ship "Oregon" are ordered to pay salvage for services rendered by the steamers "Lurline," "President" and "J. E. O'Neill." The sums follow: "Lurline," $18,000; "President," $1750; "O'Neill," $6500. Cook acted as arbitrator and directed that one-fifth of the "Lurline" award, or $3600, be paid to the officers and crew, the officers to receive a double share, prorated in proportion to the wages. The officers and crew of the "President" will receive one-third of the total award and the officers and crew of the "O'Neill" one-fourth of the sum set aside for them.

George W. Kneass, the Potrero (San Francisco) boatbuilder, has just taken a contract to build a fleet of launches for the Peterson Company that will necessitate a bit of fast work. Manager Harry Levinson of the launch concern signed the contract which calls for the construction of eight craft. Four will be 56 feet in length, 16 feet beam and 6 feet draft. The other four will be 64 feet in length with the same beam and depth as the others. When completed the vessels will be equipped with either Standard, Union, Corliss or Imperial engines, as the company has decided to try out the merits of each. In the past the Peterson Company has used only Union engines and now all of the manufacturers will have a chance to see what their engines can do. The horsepower will rate from 115 to 125. The contract provides that the hulls be delivered within ninety days.

The first hint as to the probable fate of the Standard Oil Company tanker "George W. Loomis," which has been missing off the Oregon coast since December 19, was given by Captain Hall of the Pacific Coast Steamship Company's steamer "City of Topeka." Captain Hall said that while en route to Eureka from Portland and Coos Bay he encountered a large oil-covered area of water in the vicinity of Coos Bay. He said the appearance of the oil indicated it had been released in large amounts. The "Loomis" left San Francisco for Marshfield, Ore., with a cargo of 5500 barrels of gasoline and crude oil. The vessel was sighted off the Oregon coast by the steamer "Washtenaw," which reported the "Loomis" was bucking a heavy gale but apparently was weathering the storm. The missing vessel carried a crew of nineteen and was in command of Captain E. E. Lapchie. It had a registered tonnage of 641 and was one of the first tankers built for the Standard Oil Company.

The steamer "Sehome," which was sunk in the waters of San Pablo Bay about three weeks ago, has been raised from the mud at a point about 1000 feet off El Campo by Smith-Rice & Company, Incorporated. This company purchased the vessel from the Monticello Steamship Company. The "Sehome" was towed to Oakland by one of the Red Stack tugs, which assisted in raising her. Divers patched the hole in the side of the "Sehome" and the work of pumping out her hold has been going on for several days. The vessel's wheelhouse and cabin have floated away and her boilers were lost overboard when she turned over, being brought down from San Pablo Bay to El Campo. All of the automobiles, which made up part of her cargo, were lost, save one runabout, which was badly damaged by salt water. The Smith-Rice Company hopes to repair the hull and put the vessel in commission again.

Officials of the Standard Oil Company at San Francisco announced that none of the twenty-odd vessels engaged in searching the Pacific for the missing tanker "George Loomis" had reported sighting vessel or wreckage. As a result the company has about given up hope that the craft will be reported, and arrangements are now under way to pay to the families of the missing crew the insurance carried by the company. The search has been so thorough that every square mile of water for fifty miles offshore has been combed. It is believed that there is a bare possibility that the vessel may have drifted out of the lanes of ocean travel, and if this is the case the only chance the crew will have is to be picked up by some sailing vessel bound for San Francisco by an original route. Vessels plying between San Francisco and Honolulu have been notified by wireless to keep a sharp lookout. The "Loomis" had a crew of nineteen. She sailed from San Francisco on December 19 bound for Coos Bay, Oregon.

Steamship companies owning the fifteen vessels which were returned to private control by the United States Shipping Board during the week are preparing to take advantage of the removal of restrictions imposed on all shipping board vessels forbidding night loading and forcing operators to adopt arbitrary tonnage rates set by the board. The vessels under private operation will be enabled to spend less than half the time they have been spending in port and their owners will be able to compete with the owners of foreign-owned ships in the matter of tonnage rates. The Shipping Board's release affects all vessels under 4000 tons capacity. The vessels are to be released at once, those at sea passing into the control of their owners on their arrival in their various ports. The vessels designated are as follows: Pacific Mail Steamship Company—S. S. "City of Para," "City of Peru," "Newport." (These vessels comprise the company's Panama fleet, which plies between San Francisco and West Coast ports.) Pacific Steamship Company—S. S. "Admiral Sebree," at Seattle. China Mail Steamship Company—S. S. "China." Swayne & Hoyt—S. S. "Alvarado" and "El Dorado." Matson Navigation Company—S. S. "Enterprise" and "Windber." W. R. Grace & Co.—S. S. "Santa Alicia," "Santa Inez," and "Santa Rita." Robert Dollar Steamship Company—S. S. "Stanley Dollar." Steamships "Justin" and "Grayson," owned at Seattle.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room 1, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.

One year, by mail - $2.00 Six months - - - $1.00
Advertising Rates on Application.

Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2788.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, JANUARY 15, 1919.

FURUSETH'S WORK IN EUROPE.

The Twenty-second Annual Convention of the International Seamen's Union of America will meet in Galveston, Texas, next week. According to advance information received it will be the best attended convention in the history of the American Seamen's Union movement.

For the first time since the International Union was organized President Furuseth will be absent from the convention. No word has been received from Andrew Furuseth since he left for Europe but it is not likely that he will return until the Peace Conference has reached final conclusions as regards the sea and seamen.

The vital interest of American seamen in the negotiations at the Peace Conference will be better understood when there is a true realization of its potent influence upon the future.

No less an optimist than Samuel Gompers, has recently expressed his apprehension and fear upon the results of that very conference.

Said Mr. Gompers:

> I appeal to the American people, without regard to their station in life, to see to it, to supervise, to be vigilant, lest around the peace table there are purloined from us, right under our very noses, many of the liberties and the freedom of our people.
>
> The treaty made by the United States with any other country or group of countries, that treaty being ratified by the Senate of the United States, becomes the supreme law of the land, and any law upon the statute books that is in conflict with the terms of that treaty becomes inoperative and ineffective and nil. We don't want to have made in vain all the sacrifice of our boys. We don't want to have that flesh of our flesh and blood of our blood given, and all the treasure given, and all the sacrifice made, in vain, and to have to make the fight all over again for the American people in their homes. While our boys were fighting and our men and women were working here to maintain freedom and democracy abroad, we ought to be alert now to see to it that we are not going to lose our liberty and democracy at home.

Now, it will be recalled that the American Seamen's Charter of Freedom, the Seamen's Act of 1915, was bitterly opposed, and in some instances openly protested by the representatives of the principal maritime nations of Europe.

Those very interests will be at or about the Peace Conference. Instead of accepting the humanitarian principles of the American law for their own respective country's seamen they will doubtless attempt to weaken our great statute of emancipation which has made all seamen free men when their vessels are in our ports.

Furuseth has a real job cut out for him. More than ever before in his unusually eventful life he is now carrying that grave and tremendous responsibility of watching and waiting—day and night—and always jealously guarding the liberty and welfare of the men who follow the sea for a livelihood.

THE NEW YORK STRIKE.

At the time of going to press New York harbor traffic is practically tied up because the boat owners decline to submit to arbitration the differences existing between themselves and their employes.

The Czar and the Kaiser have taken their retiring card from the little society of crowned heads which at one time "ruled" Europe.

But though we have fought and won a war for world democracy some of the industrial autocrats of our own country have not changed one whit. They still assume the benign attitude of the late Pennsylvania coal baron who honestly believed that God, in his infinite wisdom, had especially placed him on earth to protect the rights of the "independent" working man, who is known in the parlance of the street as a common scab.

Not the least interesting feature of the New York tie-up is the attitude of our great "moral engines," the daily papers. Whenever the public is inconvenienced through a strike we usually read double column editorials expressing righteous indignation, etc., etc., at the treatment accorded our old friend, "the innocent third party." In this instance, however, the public is inconvenienced not primarily through the strike but solely because of the boat owners' refusal to arbitrate. And, lo and behold, the great editors' righteous indignation remains bottled up. All their wrath is hurled at the "Reds" and the Bolsheviks in overalls.

The anarchists on the other side, the Czars of industry, the fellows who refuse to arbitrate; they always remain eminently respectable—in the columns of our "great" newspapers.

THE DISTRIBUTION OF WEALTH.

The financial column of the New York Evening Post has the following encouraging item on social readjustment:

> A return to individual expenditure on the scale of 1914 will spell a financial crash and social disorder. The mode of life has to be simpler and the distribution of wealth has to be wider and upon a more equitable basis. The worker will receive more wages in the future, and the idle rich will become fewer, if they are not shortly non-existent. To think otherwise is to ignore the lessons of the past and to misread the signs of the times.

How different from the mouthings we hear so frequently, of late, in Wall Street circles.

It is an obvious fact that because of the labor-crushers' disposition to look for a drop in wages and commodity prices, some hesitation exists in general business throughout the country. Yet all fundamental conditions, both economic and political, point to a continuation of the present levels for wages and the cost of living. Fear that American business will be placed at a disadvantage, owing to the more cheaply paid labor abroad, has less foundation than at any time in the past. In fact, instead of a permanent revision downward in American wages, there will be a steady revision upward in Europe and elsewhere.

And it is gratifying to note that at least one of those who write and compile the financial pages in America's "great" dailies has a realization and vision of a better and brighter future for those who toil and produce all the world's wealth.

A STRANGE CARGO.

One of the strangest of all cargoes, seven thousand sharks, split in half, dried, and piled up like cord-wood in the hold of the motorship "Gryme," arrived at San Diego last week from Guadaloupe Island and Ensenada, Lower California, according to an Associated Press dispatch.

The sharks averaged five feet in length. They were killed by Mexicans in the vicinity of Ensenada. It is reported that this unusual cargo will be used in the manufacture of A1 fertilizer. Moreover, the oil obtained from sharks is in demand by manufacturers of cosmetics and soaps.

The shark problem has become quite a serious one of the Southern California Coast. A few years ago 50-pound specimens of the albacore fish family were common about Catalina Island. During 1918 scarcely any 50-pounders were taken. Japanese fishing methods and the sharks are largely blamed for this state of affairs.

If, however, the shark should become a real commercial asset, as is indicated by the arrival of the shark cargo at San Diego, we may reasonably expect an early change for the better.

The food fish of Southern California waters have many natural enemies: Sharks, seals, blackfish, swordfish, etc. And it has been said of all the inhabitants of the sea that there are only two things worth while with them—"To eat and not to be eaten."

But if it really pays to hunt these fish-eating monsters of the deep their end is in sight.

The National Labor Congress, proposed by the International Workers' Defense League, to devise means of obtaining a new trial for Thomas Mooney, was called to order in Chicago, Ill., on January 14. In the meantime, a resolution is pending in the California Legislature, providing for an investigation of the San Francisco District Attorney's office. With the known opposition of the Governor to a new trial for Mooney it is scarcely to be expected that the resolution has any chance for adoption. But even though the resolution will fail of passage there will be a wholesome airing of Fickert's methods, in the Committee rooms and on the floor of the Senate and the Assembly. All this should tend to win public sympathy for an humble citizen almost railroaded to the gallows. And, in the final analysis, an enlightened public sentiment will right every wrong.

IN MEMORIAM.

Again the grim reaper has thinned the ranks of the old guard in the Sailors' Union of the Pacific. Comrade Frank Johnson, who joined the Union at the age of 21, nearly thirty years ago, died at San Francisco after a brief spell of sickness, on January 10.

The deceased was a loyal, active and faithful member of the Sailors' Union from the day he took the obligation as a union man. He always took justifiable pride in his record of service as a patrolman during the Union's early history when the income was pitifully small and the general opposition to unionism powerfully strong. For many years he attended the sessions of the San Francisco Labors as a representative of the Sailors' Union of the Pacific. He also, at various times, was honored by being elected a delegate to the conventions of the International Seamen's Union of America and the California State Federation of Labor. At the time of his death he was one of the directors of the Maritime Hall Association, which is the holding corporation for the lot and building, owned jointly by the Sailors' Union of the Pacific and the Alaska Fishermen's Union, at San Francisco.

Funeral services for the departed Brother were held on last Sunday afternoon with a large delegation of San Francisco trade-unionists in attendance. The following associates and fellow members of the Union he loved acted as honorary pall bearers: John H. Tennison, Walter Macarthur, E. A. Erickson, Geo. Larsen, Jos. Faltus and S. A. Silver.

The deceased is survived by a wife and three children, Frank Jr., Margaret and Henrietta Johnson, all residents of San Francisco.

EFFECTS OF DEMOBILIZATION.

That unemployment is with us "again," even before the Army demobilized, is shown by reports to the Department of Labor from 115 industrial communities throughout the nation. On December 28th there was unemployment in 36 large cities, equality of supply and demand in 58, and employers seeking help in only 21. A month earlier similar reports from 106 of these cities showed unemployment in only 11 cases, supply and demand approximately equal in 68, and marked labor shortage in 27.

Two months ago the Department of Labor estimated the labor shortage of the nation at the stupendous figure of 1,000,000 workers. In eight weeks' time this shortage has disappeared entirely. Conservative estimates give the number of wage earners in war occupations who are yet to be "cast loose on the labor market" at 3,000,000. And yet there are complacent souls who would have us believe that demobilization brings no new problem and that our country's fighting forces can be returned to the paths of peace without unemployment and without serious suffering among the workers.

The movement to reduce the hours of labor will continue so long as labor itself continues to be mere physical exertion for the maintenance of animal existence.

SECRET DIPLOMACY.

Nothing Can Be Worse at the Peace Conference Than An Atmosphere of Secrecy and Half-Truths.

Lord Northcliffe is admittedly an able journalist, as modern journalism goes. Whatever may be thought of his methods or his ideals—and we are not of those who have regarded him as at any time free from grave defects—he nevertheless has a keen eye for "news," a keen perception of what the public is interested in and of the demands to which it is ready to respond. His principal organ, the London Times, is probably the most powerful daily newspaper in the world. What is more, Lord Northcliffe is a weighty factor in British politics, and is credited with having made or unmade more than one political reputation. When, accordingly, he speaks out in unmeasured condemnation of the secrecy with which the preliminaries of the peace conference have thus far been conducted, we may be sure not only that the situation itself is rapidly approaching the dimensions of an international scandal, but also that public opinion is about ready to demand a change. "Nothing can be worse for the prospects of the coming conference," Lord Northcliffe declared in a statement at Paris the other day, "than an atmosphere of secrecy and half-truths. Shall the destinies of millions of people in all quarters of the globe be left to the tender mercies of a comparative handful of delegates, against whose enactments there is no public appeal? Such would be mockery of that principle of self-determination of free nations which has been fought for and won in this war."

It is of the highest importance that the American public should realize the gravity of the situation which Lord Northcliffe, in the words just quoted, describes without exaggeration. In spite of a rigorous censorship—and the rigors of the censorship over both newspaper and private correspondence have not been materially relaxed since the signing of the armistice—and the optimistic dispatches of certain American correspondents who tell how President Wilson has quieted all fears and is certain to have his way, the fact remains that nothing of importance regarding a democratic peace settlement has yet been done openly, and that the American and the Allied Governments have given no indication as yet of a purpose to have anything done openly. Neither Mr. Lloyd George nor M. Clemenceau nor Signor Orlando stands for open discussion of peace terms, nor do they appear to have been affected in the least by such protests as those of the British Labor party, or of labor and Socialist forces elsewhere, against the course which is being pursued. Even Mr. Wilson can no longer be counted among the supporters of open diplomacy; for while he is indeed reported to have expressed a wish for open discussion at the conference, he not only has taken no steps, so far as the public knows, to make his wish effective, but is himself holding private conferences daily with the representatives of other Governments regarding their respective claims and their attitude toward his own supposed program.

One might, perhaps, view the situation with less concern were there some reasonable assurance that what is being done behind closed doors is being done with sedulous regard for the people's wishes and the people's welfare. Such assurance, unfortunately, is almost wholly lacking. Not one positive indication has yet appeared that the peace settlement which is soon to be undertaken at Versailles will be a people's settlement, or that it is really, if mistakenly, intended to be a people's settlement. Hardly a single delegate whose appointment has been announced, from any country anywhere, can properly be called a people's delegate. The men who apparently are to speak for the nations at the peace conference are, in overwhelming majority, either the heads or the leading members of the Allied Governments, who, however successfully they may have piloted their countries through the war, are nevertheless responsible for every abuse of power and every suppression of constitutional liberty which the war has developed within their political jurisdictions; or routine administrative officials with eyes and ears open only to precedents and proprieties, and wholly subservient to their chiefs; or discarded diplomats of the old school, dragged from retirement to lend dignity to the assemblage and at the same time to pacify some partisan clamor. As a peace conference of people's delegates, summoned to redress the wrongs, harmonize the differences, and safeguard the future of the nations, the congress of Versailles bids fair to be, in personnel, little more than a ghastly joke.

And what, down to the present time, is the situation with which the conference will go through the forms of dealing? At bottom, the character of that situation is determined by the secret Treaty of London, concluded in 1915 between Great Britain, France, Italy and Russia, and still accepted as binding by the first three of those Powers notwithstanding that Russia has withdrawn. Of all the known diplomatic agreements which underlie the war, the Treaty of London is the most reprehensible. Not only did Italy, by that treaty, bargain for the reward, in money and territory, which it should receive in return for its entrance into the war on the

(Continued on Page 11.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Jan. 13, 1919.
Regular weekly meeting came to order at 7 p. m., E. A. Erickson presiding. Secretary reported shipping medium. Balloting for officers for the ensuing term was proceeded with.

DIED.

Adriaan De Zomer, No. 1006, a native of Holland, aged 29. Died in the wreck of S. S. "Loomis," Dec., 1918.

Frank Johnson, No. 555, a native of Holland, aged 51. Died at San Francisco, Cal., Jan. 10, 1919.

Johannes Olai Jonassen, No. 1915, a native of Norway, aged 46. Died at San Francisco, Cal., Jan. 11, 1919.

Carl W Lundberg, No. 1942, a native of Sweden, age 40. Died at Callao, Chile, Dec. 26, 1918.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Lausanne, Switzerland, rather than Paris, is to be the place of meeting of the world-wide conference of labor and Socialist organizations. French and British government officials have—despite the denial of knowledge of that fact at our State Department and at the office of the American Federation of Labor here last week—refused to permit the holding of the "congress of the peoples" upon allied soil because delegates from German and Austrian working class organizations are to take part. So much is now clear. The British Labor Party and the representatives of the British Trade Union Congress, as well as the French and Italian labor spokesmen and Socialist parliamentary leaders, are going to Lausanne. There, too, are to gather the labor spokesmen and radical democratic leaders of the neutral nations, of the smaller allied countries, or Soviet Russia and of the new nations that have come up out of the ruins of Middle Europe.

When Secretary Morrison was asked, some weeks ago, as to whether the call which the American Federation of Labor is to send out for a world congress of labor at Paris, to continue during the Peace Conference, would include Germany and Austria, he said he understood that the Germans and Austrians would be asked to send delegates. Inquiry at the office of President Gompers to-day upon that point brought the reply that "That point cannot be discussed." Inasmuch as the State Department has hitherto been inclined to disapprove any gathering which should include delegates from the late enemy countries, it may be that when Mr. Gompers issues his call it will go only to allied and neutral labor organizations.

Mr. Gompers and his four associates in the American labor delegation chosen by and from the Executive Council of the American Federation of Labor will sail on Wednesday for France. Before they go, Mr. Gompers is to take part with the National Civic Federation in a meeting at which he will discuss his policy toward the industrial-democratic movement which is sweeping over Europe, America, Australia and South Africa.

So far as intimated here, the American delegation will not make any advance toward the Lausanne conference, the whole tone of which will be set by the British, French, Italian and Russian labor and Socialist programs. At Lausanne the delegates will meet to plan and establish a new International of Labor, which shall have as its first business the rallying of the working classes of Europe to demand an immediate League of Nations which shall abolish national armaments and shall do away with commercial imperialism. They will probably pledge a world-wide League of Labor to establish true democracy—not merely in politics but in industry and in the distribution of the products of human toil.

The conference which Mr. Gompers will call in Paris is for quite a different purpose, of course. It is to attempt to bring about a federation of the labor federations of the various countries. But as the most powerful labor bodies among the French and Italians, thus far, have declared that they will join in no such movement, and as the British labor movement is generally out of harmony with the present policies of the American Federation of Labor, no surprise need be occasioned if the plan does not meet with an enthusiastic reception. There is no fear that the meetings which the American delegation may hold in Paris will witness such disorders as took place at Mr. Gompers' meetings in Italy some months ago, but there is danger that because of the importance of the issues to be discussed at Lausanne the attendance at the Paris meeting may be small.

To put the matter in a nutshell, Mr. Gompers is preaching against Bolshevism and Socialism, and according to a leading article by his editorial assistant, Chester M. Wright, in the American Federationist, he finds no particular difference between the two. Socialists, if not Bolshevists, are the leaders and a huge majority of the rank and file of the labor movement and the revolutionary political movement of Europe. They disagree, fundamentally, with the venerable head of the American Federation of Labor.

While these rival congresses of labor are being arranged across the Atlantic, here at home the first unofficial convention of the American labor movement, called for a strictly labor purpose, is to be held in Chicago on January 14—the national Mooney protest convention. Chicago is the place especially suitable for such a meeting, since it is the industrial capital of the United States, the birthplace of the new Labor Party, the scene of many of the most flagrant of the judicial crimes against labor that have stimulated and built up the organized labor movement.

Frank P. Walsh, once more an attorney for wage workers rather than an official of the Government, is to take part in the convention. From New York are coming nearly 300 delegates; from Boston and Philadelphia and San Francisco and Seattle, from Denver and St. Paul and Dallas and Birmingham are coming the other hundreds that will make this a historical assemblage. Somebody has suggested that this convention will be, in effect, a Constituent Assembly of American labor, even though it is called for the one purpose of getting a fair trial for Mooney and Billings.

It is not conceivable that the delegates can proceed far without referring to the contrast between the frame-up of Tom Mooney by the District Attorney's office and the Chamber of Commerce in San Francisco, and the release by Federal Judge Morrow of the copper trust outlaws at Bisbee who kidnaped more than 1100 working men and violated the Draft Act a hundred times when they ran these victims out of Arizona. We may expect that the convention will try to establish some sort of protection for wage workers in this country—both against shotgun kidnapers and perjuring prosecutors. Something will be said about the incident at McKeesport, Pa., where the mayor and council have forbidden all trade union meetings, on the pretense that they are "dangerous."

Charles M. Schwab, who is the head of the Bethlehem Steel Company, where 10,000 union men are gradually being "fired" on various hypocritical pretenses, has been saying that employers must recognize the right of workers to "collective bargaining," unless the employers want to get into trouble with labor. Schwab has gone to France, while trouble brews at Bethlehem. His army of employes grows rebellious, and some echoes of its fierce resentment may be heard at Chicago, where freedom of speech is not yet lost.

The Independent Labor Party of Illinois, in its platform, demands under Point 11: "Complete restoration, at the earliest possible moment, of all fundamental political rights—free speech, free press, and free assemblage; the removal of all war-time restraints upon the interchange of ideas and the movement of people among communities and nations; and the liberation of all persons held in prison or indicted under charges due to their championship of the rights of labor or their patriotic insistence upon the rights guaranteed to them by the Constitution."

If this convention were delayed a while it might have material for resolutions in the attitude of Postmaster General Burleson toward the telephone employes, whose organization he seems to be trying to suppress. The International Brotherhood of Electrical Workers, with whom the telephone operators' union is nationally affiliated, is not under direct fire from Burleson. It has agreements with the telephone companies, covering the linemen and repair men. But Burleson refuses to permit the companies to make wage agreements with the telephone operators—the women. He stands between the companies and the operators and declares that he will fix all the wages himself. The commission he appointed to advise him on the proposed increase of wages in the telephone service included one spokesman of the workers, one of the Department, and four spokesmen of the companies—according to officials of the I. B. E. W. When the telephone girls struck for the right to deal with the company, Burleson answered their return by locking them out.

Denver trade unionists are organizing the telephone operators in that city. They will hear from Burleson, no doubt.

However, Burleson may himself be hauled upon the carpet, before many days, by a committee of the Senate. Some of the Republicans want to question him on some of his autocratic methods of handling public business. A resolution calling for an inquiry is pending.

Two French war dogs, which well deserve the honor, have had their names and numbers posted up at all the French Army kennels for a deed of valor. The story is that at the time of the German offensive the dogs' keeper stayed in the rear to the very last moment, waiting for his dogs to return with an important message. When they did come the only way left to escape capture was by swimming the Marne, and the man could not swim. So he coupled the dogs together, and, clinging on to their iron chain, was dragged across the river by them, the three escaping unhurt in spite of a rain of bullets from German rifles.

The piece-work system is easily understood. The worker who is paid by the piece receives only a piece of the sum actually earned.

A "FIVE TO FOUR" DECISION.

(Continued from Page 2.)

be granted any such vessel unless the provisions of this section have been complied with."

The quotation is but a part of Section 11.* It is preceded by the explicit declaration that it is "unlawful in any case to pay any seaman wages in advance of the time when he has actually earned the same or to pay such advance wages." There is no limitation of place or circumstances and the universality of the declaration is given emphasis and any implication of exception is precluded with tautological care by the provision that "the payment of such advance wages or allotment shall in no case except as herein provided absolve the vessel or the master or the owner thereof from the full payment of wages after the same shall have been actually earned, and shall be no defense to a libel suit or action for the recovery of such wages." To qualify these provisions or not to take them for what they say, would, in our opinion, ascribe to the act an unusual improvidence of expression. And section 4 should be considered in connection. It is hence important that we give it in full. And it may be said that it is an amendment to section 4530 R. S. It is as follows:

"Sec. 4530. Every seaman on a vessel of the United States shall be entitled to receive and demand from the master of the vessel to which he belongs one-half part of the wages which he shall have then earned at every port where such vessel, after the voyage has been commenced, shall load or deliver cargo before the voyage is ended and all stipulations in the contract to the contrary shall be void. Provided, Such a demand shall not be made before the expiration of nor oftener than once in five days. Any failure on the part of the master to comply with this demand shall release the seaman from his contract and he shall be entitled to full payment of wages earned. And when the voyage is ended every such seaman shall be entitled to the remainder of the wages which shall then be due him, as provided in section forty-five hundred and twenty-nine of the Revised Statutes: . . . And provided further, That this section shall apply to seamen on foreign vessels while in harbors of the United States, and the courts of the United States shall be open to such seamen for its enforcement."

This section and the others we have quoted express something more than particular relations of ship and seaman, they express the policy of the United States which no private conventions, no matter where their locality of execution, can be adduced to contravene. The "Kensington," 183 U. S., 263; United States v. Chavez, 228 U. S., 525; United States v. Freeman, 239 U. S., 117. Nor are we called upon to assign the genesis of the policy or trace the evolution of its remedy to the act in controversy; and besides it has been done eleswhere. It is enough to say that the act itself demonstrates that it is intended as a means in the development of the merchant marine and it hardly needs to be added, to quote counsel for the Government, "that the welfare of the seaman is remarkably interrelated with that of the merchant marine." This certainly was the conception of Congress and answers the contentions based on contrary opinion and deductions. It is manifest also from the title of the act, which declares its purpose to be "to promote the welfare of American seamen in the merchant marine of the United States; to abolish arrest and imprisonment as a penalty for desertion, and to secure the abrogation of treaty provisions in relation thereto; and to promote safety at sea." Its efficacy as a means or the policy of the means is not submitted to our judgment. Ours is the simple service of interpretation, and there is no reason to hesitate in its exercise because of supposed consequences. The policy of the act was so insistent that Congress did not hesitate to abrogate opposing treaties. Certainly, therefore, we cannot give a controlling force to the suggestion that to construe the acts as the ship construes it and others, supporting the ship, construe it, is to "impose our conception of the rights of seamen upon the whole world in violation of the comity of nations." The reply is immediate: It was for Congress to estimate this and other results and to consider how far they were counterpoised or overcome by other considerations. If the section was ambiguous the asserted results might be invoked to resolve its meaning; but we do not think it is ambiguous.

It must be conceded, indeed, it is conceded, that the words of the sections are grammatically broad enough to include all seamen, foreign as well as American, and advances and contracts, wherever made, and to the contention that Congress had in mind and was only solicitous for American seamen, the answer is again immediate: The contention would take us from the certainty of language to the uncertainties of construction dependent upon the conjecture of consequences; take us from the deck to the sea, if we may use a metaphor suggested by our subject. Language is the safer guide, for it may be defined; consequences brought forward to modify its meaning may be in fact and effect disputed—foreseen, it may be, and accepted as necessary to the achievement of the purpose of the law. And the purpose is resolute, has been maintained for many years with increasing care, and the ship, being in the waters of the United States, not the nationality of the seamen, selected as its test. And lest there might be impediment in treaties, they are declared, so far as they impede, to be abrogated.

But authority may be adduced against the contentions. In Patterson v. Bark "Eudora," supra, the Seamen's Act came under consideration, and it was contended, as it is contended now, that the title determined against the body of the act and that therefore the act did not apply to foreign vessels notwithstanding its explicit words. The contention was declared untenable and the reasoning of the Court exhausts discussion on that and the other contentions as to the purpose and power of Congress. Of the first it was said that it was to protect sailors against certain wrongs practiced upon them, one of the most common being the advancement of wages; of the second it was said, quoting Chief Justice Marshall: "The jurisdiction of the Nation within its own territory is necessarily exclusive and absolute; it is susceptible of no limitation not imposed by itself." The Exchange, 7 Cranch., 116. The nationality of the seamen does not appear, but the vessel was foreign, and the application of the statute to the latter constituted the ground of controversy.

Of course, the language of an act, though universal, may find limitation in the jurisdiction of the legislature; but certainly a ship within the harbors of the United States is within the jurisdiction of the United States, and making its exercise "apply to seamen on foreign vessels," and "the courts of the United States . . . open to such seamen for its enforcement" was the judgment of Congress of the way to promote its purpose.

These considerations, we think, answer as well other contentions that is, that the act "should be construed as applicable only to seamen shipping in an American port on vessels which remain for a time in or afterwards return to an American port to load or deliver cargo" or "to seamen of American nationality upon foreign or domestic vessels, irrespective of the port of shipment."

It is enough to say of the contentions, in addition to what has been said, that they impose on the statute qualifications and limitations precluded by its words and the purpose they express. There is a great deal said, and ably said, upon these contentions and the more pretentious one that the act would violate the Constitution of the United States unless so "construed as not to apply to foreign seamen shipped on a foreign vessel in a foreign port, under a contract, valid where made . . ."

We cannot concede the qualification nor doubt the power of Congress to impose conditions upon foreign vessels entering or remaining in the harbors of the United States. And we think that the case of the "Eudora" declares the ground of decision. Its principle is broader than its instance and makes the vessel and its locality in the waters of the United States the test of the application of the act and not the nationality of the seamen nor their place of shipment, nor contravening conventions, and precludes deductions of advances.

Nor is there obstacle in the penal provisions of the act. They may be distributively applied and such application has many examples in legislation. It is justified by the rule of reddendo singula singulis. By its words and provisions are referred to their appropriate objects, resolving confusion and accomplishing the intent of the law against, it may be, a strict grammatical construction. United States v. Simms, 1 Cranch., 252; Comm. v. Barber, 143 Mass., 560; Quinn v. Lowell Electric Light Co., 140 Mass., 106. The Seamen's Act especially invokes the application of the rule. The act applies to foreign vessels as explicitly and as circumstantially as it does to domestic vessels. Let the foreign vessel be in the waters of the United States and every provision of the act applies to it as far as it can apply. In other words, it gives the right to a seaman on a foreign vessel to demand from the master one-half part of the wages which he shall have earned at every port and makes void all stipulations to the contrary. And the remedy of the seaman in such case is made explicit. If his demand be refused ("failure on the part of the master to comply" are the words of the act) the seaman is released from his contract and he is entitled to the full payment of wages earned. And he is given a remedy in the courts of the United States. The defense of an advance payment is precluded and clearance of the foreign vessel is forbidden. And thus the act has completeness of right and remedy and, we think, precludes judicial limitation of either. Its provisions are simple and direct, there is no confusion in their command, no difficulty in their obedience. Of course, a "master, owner, consignee or agent of" any foreign vessel, to quote the words of the act again, cannot violate any provision of it if he be not in the United States. If there be provisions that cannot reach him, that with which this case is concerned can reach him.

We are, therefore, of opinion that the District Court was right in refusing to allow the Liverpool advances and the Circuit Court of Appeals was wrong in reversing the ruling.

A true copy.

Test:

Clerk Supreme Court, U. S.

---

* Section 11 was an amendment of section 24 of the Act of December 21, 1898, and section 24 was an amendment of section 10 of the laws of 1884 as amended in 1886, and, as it now stands as far as pertinent, is as follows:

"Section 10 (a) That it shall be, and is hereby, made unlawful in any case to pay any seaman wages in advance of the time when he has actually earned the same, or to pay such advance wages, or to make any order, or note, or other evidence of indebtedness therefor to any other person, or to pay any person, for the shipment of seamen when payment is deducted or to be deducted from a seaman's wages. Any person violating any of the foregoing provisions of this section shall be deemed guilty of a misdemeanor, and upon conviction shall be punished by a fine of not less than $25 nor more than $100, and may also be imprisoned for a period of not exceeding six months, at the discretion of the Court. The payment of such advance wages or allotment shall in no case except as herein provided absolve the vessel or the master or the owner thereof from the full payment of wages after the same shall have been actually earned, and shall be no defense to a libel suit or action for the recovery of such wages. If any person shall demand or receive, either directly or indirectly, from any seaman, or from any person on his behalf, any remuneration whatever for providing him with employment, he shall for every such offense be deemed guilty of a misdemeanor and shall be imprisoned not more than six months or fined not more than $500."

Expressing his belief that his son, John, came to his death through the neglect of the officers of the Mercantile Marine Training Ship "Iris," John T. Kempf of Oakland, Cal., said he started an investigation in order that other youths may not meet with a like fate hereafter. "They can do nothing for my boy," said Kempf, "but a thorough investigation by Government officials may make it impossible for the carelessness and neglect which, I believe, led directly to the death of my son." Young Kempf, aged 21, was a student sailor and was put in the ship's brig December 15 for a minor infraction of the rules, staying there three or four days despite his continuous complaints that he was ill. The youth's condition was serious when the vessel docked December 21, and he was taken to the Marine Hospital, where he died of influenza five days after arrival. The boy told of his treatment to the father before his death. "I do not wish to criticise the Training Service until the matter is over with. I have great faith in it, and I believe that the Government officials will see that justice is given."

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.
2. Free schools, free text books and compulsory education.
3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.
4. A work day of not more than eight hours in the twenty-four hour day.
5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.
6. Release from employment one day in seven.
7. The abolition of the contract system on public work.
8. The municipal ownership of public utilities.
9. The abolition of the sweat-shop system.
10. Sanitary inspection of factory, workshop, mine and home.
11. Liability of employers for injury to body or loss of life.
12. The nationalization of telegraph and telephone.
13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.
14. Woman suffrage co-equal with man-suffrage.
15. Suitable and plentiful playgrounds for children in all cities.
16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.
17. Continued agitation for the public bath system in all cities.
18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.
19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER

(Continued from Page 3.)

the American people, without regard to their station in life, to see to it, to supervise, to be vigilant, lest around the peace table there are purloined from us, right under our very noses, many of the liberties and the freedom of our people.

"The treaty made by the United States with any other country or group of countries, that treaty being ratified by the Senate of the United States, becomes the supreme law of the land, and any law upon the statute books that is in conflict with the terms of that treaty becomes inoperative and ineffective and nil. We don't want to have made in vain all the sacrifice of our boys. We don't want to have that flesh of our flesh and blood of our blood given, and all the treasure given, and all the sacrifice made, in vain, and to have to make the fight all over again for the American people in their homes. While our boys were fighting and our men and women were working here to maintain freedom and democracy abroad, we ought to be alert now to see to it that we are not going to lose our liberty and democracy at home.

"I am impressed particularly with the appeal to the conscience, to the judgment, to the ideals, to the Americanism of our people for united action. You cannot get freedom, nor practice freedom, on empty stomachs. The hungry men may engage in a riot, may engage in a revolt, but their course is never of a constructive character. Hungry stomachs do not make reasoning brains. It is necessary to maintain the standards of life of the American working people that they may have sound bodies, and the opportunity for reasonable thinking, with aspirations of such a character they will build up the institutions of this republic. Enlightened discontent, the higher and better aspirations of the masses of the people furnish the greatest impetus to progress and civilization. The discontent of hungry people leads to nowhere except chaos, confusion and reaction.

"During the early months of the war, a phrase was applied to the industrial conditions then in the course of development. It was this: 'During this period, don't rock the boat.' I want to apply that same phrase to the present situation. There are too many circumstances and conditions of turbulent waves of an unruly sea to attempt to rock the boat now."

Precedent Doesn't Appeal.

In a speech in London, England, President Wilson announced that he does not consider precedent as binding.

Previous speakers had referred to the President's visit here as a precedent breaker. To this the President replied:

"And, after all, the breaking of precedents, though this may sound strange doctrine in England, is the most sensible things to do. The harness of precedent is sometimes a very sad and harassing trammel."

In another portion of his speech the President indicated that he has a grasp on the forces that urge men out of the beaten paths in their efforts to improve conditions. He said:

"I am perfectly aware that I have in me all the insurgent elements of the human race. I am sometimes, by reason of long Scotch tradition, able to keep these instincts in restraint."

Just a Hog Wallow.

"Dirty, nasty, foul and fearsome, Hog Island has been whitewashed until it looks almost clean," says the Madison (Wis.) Capital City Times. "So now those eminently respectable men who made millions of dollars but failed to make a single seaworthy ship before the war was over are restored to front pews in their endowed churches.

"Hog Island was just a hog wallow. It had been for sale for $800,000 with no buyer before the war. Came then patriots for profit from New York and promised boats in countless numbers. They just wanted a little from the Government for their "know-how" which was much less than nothing at all. But the Government fell for these men of high financial standing in Wall Street and gave them right of way. The first thing they did was to hold the Government up for $1,800,000 on the "hog wallow." Then they estimated they would need $21,000,000 to pave the way to build ships. They spent the twenty-one millions and forty-one millions on top of that. But they did it all under the advice of their regularly retained lawyers and they committed no crime. They skinned Uncle Sam legally which you know is perfectly proper according to the best Christian ethics of Wall Street. And having done it legally the committee of investigation has applied the whitewash and there you are."

THE BRITISH ELECTIONS.

According to reports, so far received, British Labor circles profess considerable satisfaction with the result of the elections on the ground that Labor has secured nearly one-quarter of the total votes polled on a vote which is barely 50 per cent. of the electorate, and that the party has nearly doubled its number of parliamentary representatives. The defeat of so many old and experienced Labor leaders is, however, acknowledged as serious, and the leader of the Labor group in the new House of Commons has yet to be decided upon, and the matter will probably be dealt with at an important sitting of the Labor Party executive to be held shortly.

Complete returns from the elections for the new House of Commons give the following results:

Coalition.	
Coalition Unionists	334
Coalition Liberals	127
Coalition Labor	10
Total coalitionists	471
Other Parties.	
Unionists	46
Asquith Liberals	37
Labor	65
National Party	2
Socialist	1
Irish Nationalists	7
Sinn Feiners	73
Independents	5
Total of other parties	236
Coalition majority	235
Coalition majority with 46 Unionists	327
Grand Total	707

All coalitionists, with the Unionists and the National Party, may be regarded roughly as supporting Lloyd George. The only opposition will be formed by the Asquithian Liberals, Laborites, and Independents.

It is authoritatively stated that the defeat of Mr. Arthur Henderson and others does not mean their withdrawal from public life. Many will continue their work as journalists and propagandists as before, while Mr. Henderson will continue his at the Labor Party headquarters, the secretaryship of the party now being a permanent conference appointment.

As to those Labor members who have been returned, C. W. Bowerman, secretary of the Trade Union Congress, predicts that one result of the election will be to clear the air, so far as the Labor Party is concerned, all men who failed actively to support the energetic prosecution of the war having gone under. Mr. Henderson's defeat, however, he attributed to misrepresentations of his real position. Labor, he anticipates, will be sufficiently strong in the new House of Commons to exercise a wide influence on the social legislation the Coalition Government is bound to introduce, and he sees no reason, he declares, why Labor members of all shades should not unite.

In this connection, he declares that the Labor Party's action in calling upon those members who had taken office to resign, was a great mistake, and he, for his part, declines to rule out any man who is prepared to support the full Labor program.

Mr. G. J. Wardle, parliamentary secretary to the Board of Trade, has expressed similar views, declaring that there are great possibilities in the present situation, if a real attempt is made to unite all sections which may be legitimately described as "Labor."

Meanwhile, J. H. Thomas, addressing his supporters at Derby after the declaration of the poll, said the fact that 90 per cent. of the soldiers who voted, voted for him, must be regarded as instruction to see that justice was done to the men who had done the fighting, and he could be relied on not to betray that trust, and to see that what had been secured by such sacrifice was made permanent at the Peace Conference, that war was made impossible in future, that conscription was abolished, and that the nation as a whole was helped to become worthy of the sacrifice made on its behalf. They were sitting, he continued, on the safety valve. The Central Empires were in the throes of revolution, and there were those who talked glibly of a similar development in this country. He wanted no such thing, believing the people could obtain what they desired by intelligent exercise of that power through their recognized political institutions. He was going back to Parliament, he added, not as an anti-government member, but as a watchdog for the common people.

Gradgrind himself shines as a sentimentalist in comparison with the Southerner who insists that the children should be put in the factory instead of in the school.

Overtime and piece-work are the twin devices by which individual greed is used to degrade the mass.

The employer of child labor is a homicide on the wholesale.

"BOLSHEVISM."

All who object to any change, including all who have profited by some special privilege or opportunity, of which there is not enough to go 'round, must be deeply grateful to Lenine and Trotsky for having introduced or given world currency to this new word, used by them to hide their meaning and to express their objection to social justice—"Bolshevism." The least thoughtful, even, must realize that every established government in the world feels itself liable for a breach of promise action brought by its people for failure to represent the people as a whole and for too great tenderness to the few who possess most of the wealth and property of every large country, on all of the six continents. The words "socialism," "anarchy," "communism," commonly hurled by those who have, aganst those who have not—because the chance to have has been snatched away from them—had become a little stale. It was indeed a relief to find a new epithet of hatred and disgust to apply to people who refuse to adopt the motto, "Whatever is, is best." We regard bolshevism as a scourge; but realize that bolshevism has never lifted its head to secure results or make trouble except in countries where injustice has long prevailed; where legislative bodies and governmental executives and administrators have been venial, corrupt and incompetent. When legislators and governmental executives in our country express their fear that a wave of bolshevism will sweep our country, we cannot escape the logical conclusion that "conscience doth still make cowards of us all"; that they have failed to live up to their own several duties and responsibilities. Bolshevism, as such, cannot be cured, because it is only a result. It is a disease bred by injustice, fostered by oppression, and brought to fruition in desperation. It is a dangerous effect germ, because it so fully distracts people's minds from its causes. America is summoned to exterminate causes which, if left to continue, would inevitably produce bolshevism here. To exterminate the causes is a prime purpose of America's program of domestic and international reconstruction.—The Farmers Open Forum.

ALASKA REINDEER MEAT.

Sixty tons of dressed reindeer meat was recently marketed in the States. This meat is quite tender and, although it has the taste of wild game, it is as good as beef. The reindeer weighs, on an average, about 150 pounds, dressed. Mr. Carl Albertson of Nome estimates that there are over 100,000 reindeer in Alaska and that herds aggregating 18,000 have been purchased and will be marketed.

The Government imports reindeer from Siberia. Of the large herds now in the Territory, some 2000 are owned by natives, representing a money value of approximately $1,600,000.

The reindeer live on lichens which would otherwise be valueless, and there are no expenses attached to their maintenance beyond the labor of herding and the cost of sheltering and butchering.

Demand the union label upon all purchases!

SECRET DIPLOMACY.

(Continued from Page 7.)

side of the Allies, but the Allied Powers themselves, champions of the rights of peoples and of the sanctity of international agreements, secretly consented that Italy should satisfy its lust for territory at the expense, not alone of Austria, but of friendly states. If it is the disgrace of the then Governments of Great Britain and France that they should have plotted in secret for the ultimate parcelling of territory which did not belong to them, it is the deeper shame of Italy that it put a price upon its support and stayed out of the war until the price was guaranteed. Yet the secret Treaty of London is still in force. Mr. Balfour has recently declared its observance to be an honorable obligation of the British Government, while Italy not only proposes to stand for it to the letter, but is already proceeding with the occupation of the Slav territories which the treaty promised. Mr. Wilson, who is reported to have discussed the question with Premier Orlando and Baron Sonnino, appears not to have been able to shake the determination of the Italian Government to have its pound of flesh.

The secret understandings which Lord Northcliffe denounces, however, go further. Already the cable dispatches have told us that the three Governments which were parties to the secret Treaty of London have been in secret conference, and have reached an agreement upon the main lines of policy which they will support at the peace conference. What does this mean? The answer may be read by any one who will scan the list of some of the chief problems which the peace settlement involves. The Jugo-Slavs, whose national independence the United States and the Allies have recognized, but who now find themselves the victims of Italian aggression, will have to accept a compromise; for Italy is an important factor in the Allied plans for the Mediterranean, and must not be offended. The Czecho-Slovaks, whose national independence has also been recognized, will likewise have to accept the decision which will eventually be announced and which perhaps has already been secretly arrived at. The immediate fate of Russia, which desires neither indemnities nor annexations, is perhaps at this moment being decided in secret pourparlers in which no representative of the Russian people is allowed to participate. So with Germany, and Austria, and Rumania, and Greece, and the German colonies, and Turkey, and all the rest; so also with indemnities, and military occupation, and the German fleet, and the economic war.

There is only one course that can save Mr. Wilson and his policies. That is to insist upon the immediate abandonment and repudiation of the Treaty of London and the whole baneful structure of secret negotiations and private understandings; and, failing that, to appeal to the peoples against their Governments. Unless this is done, the peoples who now look to Mr. Wilson will before long look to themselves.—The New York "Nation."

H. F. Alexander, president of the Pacific Steamship Company, has been appointed a member of a committee of five shipping men that will meet in Washington during this week to advise with the Shipping Board concerning the future policy of the American Merchant Marine. Alexander was in San Francisco last week as the guest of D. C. Jackling. He disclosed the fact that Jackling has for six years had an interest in the Admiral Line, now the Pacific Steamship Company. "Among the questions that will arise in Washington is that of the allotment of Shipping Board vessels to the Pacific and Atlantic coasts," Alexander said at the Hotel St. Francis. "I am going to see that the west coast gets its share, and of that share San Francisco will get a considerable part. The conference of steamship men has been called because it is known that France and England already have determined their future policies and the United States must formulate its plans. I am not in favor of Government ownership of shipping, for that would place the Government itself in actual, direct competition with other nations."

Officials of the Marconi Wireless Company at San Francisco expect to be notified shortly that permission has been granted to reopen the big plants of the company at Bolinas Bay and Marshall for commercial business. In anticipation of this, the receiving station at Marshall and the sending plant at Bolinas have been put in complete readiness to enter into service at a moment's notice. The resumption of business will result, it is believed, in the elimination of the congestion of the present business and it will again be possible for the commercial firms to obtain faster service. As an indication of the present congestion of business, Ben Dailey, manager of the Overseas Shipping Company, announced that a message filed at Shanghai, giving notice of the arrival there of the motor-ship "Alabama," was received here three days later. The Bolinas and Marshall plants will be utilized only for messages between this city, Honolulu and the Orient. Shipping men are anxious to learn that the Government has decided to permit the resumption of the service by private ownership and expect that their business of shipping will be greatly facilitated when this happens.

Labor News

Every indication points to the labor unions as the leaders in the movement for having the Government retain the railroads. Members of the House Interstate Commerce Committee at Washington are receiving Government ownership petitions daily from unions throughout the country.

Miss Julia Lathrop, chief of the Children's Bureau, and Miss Grace Abbott, director of the Child Labor Division of the Department of Labor, have gone abroad to study the protective measures that have been undertaken for child labor in England, France and Italy with a view to inviting experts to a conference to be held in this country.

President Bryan, of the United Leather Workers' International Union, warns members of that organization that the millennium is not just over the hill, even though the Kaiser has been defeated. "A victory for industrial democracy would bestow greater benefits than all other victories combined," writes the trade unionist in the Leather Workers' Journal. "While democracy in government is a step in the right direction," he said, "it is only a step in the direction of true democracy; no peoples are free where the many are dependent upon the few for their daily bread; industry should bring its own reward for its face value, not a limited reward to the degree some autocrat might in charity feel disposed to distribute as a wage to those who produce all."

Postmaster General Burleson reaffirms his hostility to the postal employes' organization in his report to Congress. His last year's report is as follows: "The conduct of these organizations at this time is incompatible with the principles of civil service and with good administration of the postal service. They are fast becoming a menace to public welfare, and should no longer be tolerated or condoned. It is earnestly recommended that the provision in the act of August 24, 1918 (giving employes the right to petition Congress and to affiliate with the A. F. of L.), be repealed." There is no reason to anticipate that Congress will give heed to the demand of the Postmaster General that the postal employes shall be deprived of their statutory right of associating together for their mutual betterment.

No more permits for the importation of Mexican and West Indian labor will be granted and permits already granted will be void after January 15. Aliens permitted previously to enter temporarily for war work will be returned gradually. Porto Ricans are not classified as war emergency labor. The immigration law does not apply to them, and there are other reasons than war emergencies involved in their admission. No change of policy is made with respect to them. Mexican farm laborers already in this country may remain for the present crop season, the date of their return to be hereafter determined. The Department of Labor aims to bring about a total abrogation of war emergency labor permits, but feels that as to such for whose admission permission has been given this must be achieved gradually, and sufficient notice given so that no just cause for complaint may arise

INFORMATION WANTED.

Members of the crew of the SS. "Brazos," which salvaged the SS. 'Iroquois," about March, 1918, should file, as soon as possible, with me, their claim for their share of the salvage money, or communicate with me at once, as I have noticed the case for trial, and confidently anticipate a verdict in the favor of seamen, for a considerable amount.

ISIDORE A. RABINOW,
Attorney for Seamen,
277 Broadway, Room 401,
New York City.
1-8-19

Members of the crew of the steam schooner "Florence Olsen" who signed articles at New York on September 15, 1918, for a voyage to Central America and return, and who were on board said schooner at the time she salved the steam schooner "Claremont" near the Tucker Islands, off the coast of Nicaragua, on October 31, 1918, and towed her into Christobal, will kindly communicate with Silas B. Axtell, 1 Broadway, New York City. 12-25-18

For the benefit of the widow of John Karus, lost at sea, October 17, 1918, at 2:15 a. m., according to the report in the official log of the barkentine "Aurora," will all members of the crew of that vessel who know anything about the ship, the condition of her rigging, before and after the accident, or anything that will tend to explain his disappearance, communicate with the undersigned attorney for the widow?—Silas Blake Axtell, No. 1 Broadway, New York City. 1-1-19

Members who were present at the time when W. Bodie met with an accident on board the S. S. "Eastern Sea," last July, are requested to communicate with the above named comrade, P. O. Box 65, Seattle, Wash. 11-6-18

Members of the crew of the S. S. "Fred W. Whellen" who were on board November 11, 1918, when she picked up the bark "Galica" should file their claims with this office and be joined in libel which is being filed by the undersigned on behalf of the members of the crew. Silas B. Axtell, 1 Broadway, New York City. 12-25-18

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

INFORMATION WANTED.

Members of the crew of the steamer "Brazos" who were on board when she picked up the S. S. "Iroquois" can obtain money due them for such salvage services by communicating with Silas B. Axtell, attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 7-31-18

Members of the crew of the S. S. "Argonaut," who assisted in the salvage services to the S. S. "Jason," at the time she was in distress off the coast of Florida, on or about January 1st, 1918, will kindly call or communicate with the undersigned who is representing most of the officers and crew of the S. S. "Argonaut." Silas B. Axtell, One Broadway, New York City. 7-24-18

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

Anyone knowing the whereabouts of Jan Zwart, will please communicate with Consul General of the Netherlands, Mills Bldg., Montgomery and Bush streets. 10-23-18

Anyone knowing the whereabouts of Daniel Shean, last heard from at Cleveland, will kindly communicate with his brother, Richard Shean, 7014 Cedar Ave., Cleveland, Ohio. 11-6-18

Home News

The Farmers' Union of North Carolina, with a membership of 17,000, has taken a firm stand in support of equal suffrage.

It is reported that the idea of retaining and expanding the State Constabulary was found to be a not unwelcome one at the recent Governors' Conference held at Annapolis.

Major Willard D. Straight, publicist and man of affairs, who recently died in Paris, provided in his will a fund of $300,000 to be used by the New Republic, a New York weekly.

The United States Postal Department showed a surplus of $19,979,798 for the year ending June 30, 1918. That ends another of the stock arguments against public ownership. One by one Uncle Sam is knocking them out.

Senator Kenyon of Iowa defended the passage of the luxury tax amendment in the following manner: "You don't want to send word out to the country that this bill is being framed to protect big business and those who took big profits out of the war." And Senator Johnson of California hurled his criticism upon the Senate Finance Committee for waiting until this late hour to levy the 80 per cent. war profits tax.

Former President Roosevelt, aged 60, died at his home at Oyster Bay, N. Y., on January 6. His estate is understood to amount to not more than $500,000. His will provides that the entire estate, except the family silver and plate, shall be held in trust for the widow during her life, and gives her power to dispose of it by will as she sees fit. In the event she leaves no will, the estate is to be divided in equal parts among the children.

Retail prices of food for the United States increased 1 per cent. from October 15 to November 15, and 18 per cent. in the year from November, 1917, to November, 1918, according to reports received from retail dealers by the United States Bureau of Labor Statistics. In the year ended November, 1918, pork chops advanced 26 per cent., roast rib and sirloin steaks 28 per cent., round steak, chuck steak and plate beef 30 per cent., while in the month ended November 15 pork chops decreased in price 5 per cent., chuck roast 2 per cent., sirloin steak, round steak, rib roast and plate beef, 1 per cent. each.

At a hearing before the House Interstate Commerce Committee Chairman Colver of the Federal Trade Commission declared against Government ownership of the meat industry. "The Commission never suggested that the Government take over the packing plants and the Commission does not do so now," he said. While the Commission does not favor Uncle Sam going into the meat industry, it does insist that control of terminals, refrigerator cars and other facilities by the so-called "big five" packers give them an advantage over competitors. These packers are Swift, Armour, Morris, Cudahy and Wilson, and have been the subject of searching investigations by the Commission, which has made public the interlocking interests possessed by these establishments.

Domestic and Naval

The United States Shipping Board has fixed $700,000 in lots of one to four as the price of each of the 3500-ton wood ships which it now desires to sell to private owners. Where the vessels are bought in lots of five to twenty, a price of $675,000 each will be made, and where the ships are bought in lots of more than twenty, the price is $650,000 each.

The British steamship "Kerry Range" 5856 tons gross, 3798 net, built at Newcastle in 1916, is reported sold to the Nafra Company, Incorporated, New York, for about $1,250,000. This steamer, while owned by Furness, Withy & Co., Limited, was badly damaged by fire at Baltimore early this year and sold to the Canada Steamship Lines, Ltd., who have now disposed of her.

Provision for employment by the State Department of twenty-five new consuls and 150 vice-consuls has been written into the 1920 diplomatic appropriation bill by the House Foreign Affairs Committee. This is in furtherance of the plan of after-the-war extension of American commerce. An appropriation of $3,000,000 for purchase of embassies in foreign countries also was approved by the committee.

Secretary Daniels and the Naval Department generally, are urging the passage of a bill now pending in Congress providing for the permanent public ownership of all commercial shore radio stations. The Navy already owns 53 or all but 16 of these stations. The passage of this bill will increase the number of publicly owned stations from 53 to 111 and will give the Government practically full control of the radio service in the United States.

Thirty-six of the Government's wooden steamers have been chartered for operation on the Atlantic, according to officials of the Shipping Board. None of these vessels have been placed among private operators on the Pacific Coast and it is not expected that a single bottom will be farmed out here. Owing to the construction of the vessels, their operation here is not possible, local men say. None have been designed to carry lumber and all of the runs on this coast are too long to permit of profitable operation. On the Atlantic there are numerous short runs, and as long as the rates are high, the wooden ship can be used there to good advantage.

A British admiralty order warns people against the sinking of mines by rifle fire near the coasts. Only when danger to property is threatened should mines be sunk in close vicinity to the shore. Sunk in this way, the mines are liable to remain as an underwater danger close to the foreshore. The issue of this order should serve as a reminder that there are still thousands of mines at large, and that the task of clearing the seas will prove no light one. For years to come the mine risk is one which merchants and shipowners will do well to insure against. From the marine underwriter's point of view the presence of mines on the ocean highways of the world which have escaped the attention of the mine sweepers will tend to create doubt as to the fate of missing vessels and controversies on this source can not fail to arise in the future.

INFORMATION WANTED.

In Re Argonaut vs. Jason: Members of the crew who have retained me are advised that the underwriters have given me positive assurance that they will be treated fairly in adjusting this salvage claim. That the delay is caused by their inability to ascertain who are the owners of the cargo and its value at the time delivered abroad and when the salvage was performed. There is no action that I can take that would hurry the matter. Said they are acting in good faith.

1-8-19

"Neurasthenia," said Mrs. Biggums to her cook, "I think we will have some chicken croquettes today out of that left-over pork and calves' liver." "Yes'm," said Neurasthenia, called Teeny for short. "An' we got a little bread dressin' what went wid the pork, mum. Shall I make some apple sauce out'n hit, mum?"—Richmond Times Dispatch.

"There's just one more condition," said the new maid. "The wages you offer to pay are satisfactory and the evenings you allow me to myself are all right, but something else must be understood." "And what's that?" "If I consent to come to live at your home you must agree to do all the work yourself."—Detroit Free Press.

"I'm surprised that you welcome me so warmly," said the seedy visitor. "Why?" asked the editor. "I must admit that I have a poem to show you." "I inferred as much, and that's why I welcomed you warmly. It might have been a plan to run the war."—Louisville Courier-Journal.

"Why don't you get out and hustle? Hard work never killed anybody," remarked the philosophical gentleman to whom Rastus applied for a little charity. "You're mistaken dar, boss," replied Rastus; "I'se lost fo' wives dat way."—People's Home Journal.

Counsel—Then you think he struck you with malice aforethought?

Witness (indignantly)—You can't nix me up like that. I've told you twice he hit me with a brick. There wasn't no mallets nor nothin' of the kind about it.—Shipping World.

"John," exclaimed the nervous woman, "I believe there is a burglar in the house." "I haven't time to fool with small fry," was the sleepy response. "I've spent the entire day fighting regular profiteers."—Washington Star.

The Public
A Journal of Democracy
Poverty is A Crime!
IT isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was
"The Crime of Poverty"
It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.
Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.
Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."
THE PUBLIC
122 E. 37th St., New York City

INFORMATION WANTED.

Members of the crew of the S. S. "Macona," who signed Shipping Articles at New York about April 1st, 1917, are entitled to a share for salvaging the said ship when she was partly wrecked near Havre, France. Members of the crew of the said ship should file, with me, their claims for their share of the salvage money, which I am now trying to collect for other seamen.

ISIDORE A. RABINOW,
Attorney for Seamen.
277 Broadway, Room 401, New York City. 1-1-'19

INFORMATION WANTED.

Members of the crew of the S. S. "St. Charles," which salvaged the S. S. "Tea" in 1917, who have not yet filed with me their claim for their share of the salvage money, should do so as soon as possible, as the case will come up for trial in a very short time.

ISIDORE A. RABINOW,
Attorney for Seamen.
277 Broadway, Room 401, New York City. 1-1-'19

INFORMATION WANTED.

Members of the crew of the "Florence Olsen," who were on board the said steamship when she salvaged the "Claremont" on October 31, 1918, off the coast of Nicaragua and brought her to Cristobal, should file with me their claim for their share of the salvage money as soon as possible, as I am taking up on behalf of other members of the crew the collection of salvage money due them.

ISIDORE A. RABINOW,
Attorney for Seamen.

News from Abroad

Bocas del Toro, the banana loading port of the Republic of Panama, is greatly excited over the discovery of oil in paying quantities on Columbus Island, in the Bay of Chirisui.

American forces operating in Siberia and Northern Russia total 12,941 officers and men, the War Department announced. In Siberia are 255 officers and 7267 men and in Northern Russia are 5419 men. The units in the Archangel region are the 339th Infantry, 1st Battalion of the 310th Engineers, the 337th Field Hospital and the 337th Ambulance Company.

It is announced that Raoul Villain, who assassinated Jean Juares, the French Socialist leader, on July 31, 1914, will be brought to trial soon. M. Juares was shot and killed by Villain while dining in a Paris restaurant. Villain was arrested soon afterwards and declared that he had shot the Socialist leader because Juares had betrayed France in leading the campaign against the three-year military law.

Giusippe Andriulli, of the General Federation of the Association of Italian Journalists, appeals to its president to approach the Premier and Cabinet concerning the abolition of the censorship, which it is complained is maintained for the protection of certain politicians. He urges that as a first step in this direction the telegraphic consorship should come to an end, telephonic communication with foreign countries be restored, and foreign newspapers freely admitted into Italy.

Establishment of a permanent international court to adjust employment conditions as part of the league of nations has been considered by the British cabinet. "The war cabinet is considering a proposal to ask the peace delegates to appoint a commission for investigation of the question of international adjustment of conditions of employment," said the London Express. "A plan is expected to be submitted for establishment of an international court to secure joint action on such matters. It is certain the suggestion will be adopted, and it is certain such an organization would grow out of the peace conference as part of the league of nations. France cordially sympathizes with labor's demands that it be represented in the negotiations, and it is likely that several employers and workmen will go to the conference."

A semi-official communication from London states that the British War Cabinet has just agreed to the proposals which were laid before it by the Shipping Controller at the request of the French Government, regarding the cession to France of important tonnage in the shape of vessels, either recently constructed or now in course of construction in British shipbuilding yards. This arrangement is the outcome of the negotiations which have been proceeding since January, 1918, between M. Clementel, Minister of Commerce, and Sir Joseph Maclay, British Shipping Controller, and has reference to the cession of 500,000 gross tons of shipping, one-third to be delivered at the conclusion of hostilities, another third in the course of the first year after the war, and the remaining third during the succeeding year.

With the Wits

"Is golf a difficult game to master?"

"I guess so. Nobody's ever mastered it yet."—Detroit Free Press.

Crawford—Everybody seems seeking an excuse to raise the price.

Crabshaw—You're wrong, old man. They raise it without any excuse.—People's Home Journal.

"You used to laugh at prunes as an article of daily food."

"I'm still laughing at 'em. When I see 'em coming on the table I laugh for joy."—Washington Star.

"My son," said Mr. Boleby, "why are you always behind with your studies?"

"So that I may pursue them, father, dear," was the reply.—Tit-Bits.

"I'm going to get a divorce. My wife hasn't spoken to me for six months."

"Better be careful. You'll never get another wife like that."—Boston Transcript.

Crawford—You seem cheerful over the hardships of war.

Crabshaw—Why not? My neighbors have sent their talking machine to one of the cantonments, and the girl across the street, who used to sing and play half the night, has gone to France for the Red Cross.—Life.

Captain—Do you see that German captain on the bridge five miles away?

Jack—Aye, aye, sir.

Captain—Then let him have one of those twelve-inch shells in the eye.

Jack—Aye, aye, sir; which eye, sir?—Tit-Bits.

"Has you made all arrangements fo' your marriage, Mandy?"

"Well, not quite all, Dinah. I'se got to buy a trooso, an' rent a house, an' get mah husband a job, an' buy him a good suit o' close, an' get some reg'lar washin' work to do. An' when them's done I kin name de happy day."—People's Home Journal.

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

257 HANSFORD BLDG., 268 MARKET STREET

Under Capt. Christensen's personal and undivided supervision, pupils of this favorably known school are taught all up-to-date requirements for passing a successful examination before the U. S. Inspector.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 20. SAN FRANCISCO, WEDNESDAY, JANUARY 22, 1919. Whole No. 2522.

LEGAL JURISDICTION

While Courts, Judges, and Lawyers Squabble, Labor Suffers

The following frank criticism of the autocratic attitude of our courts toward labor has been written especially for the Journal by Mr. W. B. Rubin, the well-known Western labor attorney. That it is none too severe is abundantly proven by labor's experience with the courts of this country. That experience has been largely responsible for the widespread belief among American workers that there is one law for the rich and another for the poor.

Mr. Rubin's proposed remedy for the evils of an autocratic judiciary is not original with him, but is none the less on that account entitled to serious consideration by workingmen. Elected judges will, in the nature of things, always be more responsible to the popular will than appointed ones.

From time immemorial, powers international and intranational have clashed over matters of jurisdiction. As old as life itself is the proposition that the more one has, the more one wants. It goes back to the basic principle that each within himself seeks to control and retain as much power as may be.

In other words, no matter how sincere we may be in our desire for democracy, we are all autocratic, nevertheless, to the extent that we strive for power for ourselves, whether monarchial or democratic.

Unlimited power is a dangerous thing; inherited power is a standing menace to the people; while life power is monarchial in its application and result.

The difference between one who seeks for all the power for democratic control, whether within or without, and the one who seeks power, within or without, for monarchial control, is that in the former instance, the limitations placed upon it by the people give the people opportunity to check any digression or deviation, threatened or actual, from real democratic tendencies, while in the latter case, once the power is bestowed, it continues to grow more domineering and forceful, and it is only by revolution or by violently deposing such monarchial power, as was done in Europe recently at tremendous cost and waste, that it can be changed.

One can hardly turn to the consideration of anything at this time without referring to the fact that a war has been ended and that political democracy is now supreme everywhere, while industrial democracy is on the ascendant.

But we, who have been busy directing our efforts, our lives, our money towards ridding the world of the European Kaiser and his kaiserites, have now before us in the United States the tremendous task of turning out the kaisers in this country.

It is true, we have a political democracy unexcelled, on the whole, by any other democracy on the globe. It is true, also, that labor, particularly organized labor, has been clothed with respectability because of its loyalty and its untold sacrifices in this great war. In fact, there is apparent the reconstructive inclination, even among employers, for the creation of standards for labor such as organized labor has been fighting for for these past numerous decades.

But all that is of little real benefit to labor so long as we have within the borders of this country the greatest possible menace to a real democratization of our industries and our politics: the present system of courts of this country.

The courts as they stand today are the only citadel left to which the enemies of democracy and the despoilers of labor may go with their legal hirelings, who with their "quiddities, their quillets," and their various interpretations endeavor to strike blows against the progress and new order of things in their effort to keep intact and whole the old machinery of democratic destruction.

The war has brought about new problems. Why should it be necessary for the consideration of government or non-government ownership of railroads, telegraphs, mines, and so forth, to have jurisdictional determination by the courts? Yet we have in this country a constant clash between court and court, particularly between the State courts and the Federal courts, over our system of jurisdictional interpretation, over our system of jurisdictional control.

State judges, while they are sovereign within their limited jurisdictions, are obliged, at stated periods, to return to the suffrage of the people for re-election, and hence, by reason thereof, are constantly reminded that they must maintain some semblance of democracy. So, while it is true that State judges are autocratic due to the tremendous power placed at their disposal, the fact that some who have been unduly auocratic have failed in re-election because the awakened people rebelled, has acted, in a measure, as a check and a warning.

But the Federal judge is appointed for life, during good behavior. That means that so long as he does not steal nor accept a bribe, he is the Federal judge. Now, a life job is a dangerous thing, particularly when it is held by a small man, a narrow man, a man of little vision and understanding; and it is a lamentable fact that we find our Federal courts filled, in many instances, by corporation politicians who have assumed power, the like of which not even a kaiser nor a czar in their palmiest days dared exercise.

In labor cases, Federal judges and Federal decisions have proven the most harsh, and today the Federal courts constitute the nation's institutions of autocracy, with Federal judges the autocrats of this country, paradoxical though this may seem.

The injunction has been the awful weapon used by capital against labor. Occasionally a judge of a State court, and sometimes even the entire personnel of a State Supreme Court, has given favorable consideration to labor's side in an injunction controversy. But, while labor has feared the injunction, it has feared most the Federal injunction. Therefore capital, whenever it could, has sought to hale the alleged case against labor into the Federal courts.

The only theory upon which capital can drag labor into the Federal courts is on a plea of diversity of citizenship, for in most cases between capital and labor there has not been present any other element which would bring it within Federal jurisdiction. Thus, we find that capital's advantage over labor could best be maintained, ordinarily, if the matter came into the Federal courts, for there the Federal judge, with his life job, could sway his injunctional sword like a pasha, and behead every laborite charged with contempt, all without fear of retaliation at a judicial election.

The trick has been worked quite often of late whereby, on one pretext or another, in a strike between employer and employes, both of whom were inhabitants and residents of a given State, someone else would come in, a third party from some other State, and under the pretext of injury to his business because of the strike, drag the case into the Federal court, making the employer a supposed defendant with the strikers, and thus giving the Federal court jurisdiction.

In the early spring of 1917, at Hamilton, Ohio, there was a strike of the molders at Niles Tool Works. After a conference in which the Government mediator took part, peace terms were arranged and the men, in good faith, returned to work. But on the part of the Niles Tool Works, it had been merely a Brest-Litovsk treaty, for immediately after the men returned to work, in good old Teuton fashion, kaiserlike, the terms of the treaty were cast aside, and efforts made to destroy the organization. The men, with true American spirit, resented and again went on a strike. Some wrongs were committed, but careful, calm, and impartial analysis proved that they had been generated by the Niles Tool Works. It was, therefore, but natural that the town authorities and the home environment should be sympathetic with the men because everybody knew how rotten a scheme the Niles Tool Works had "pulled off" on the striking men.

The Niles Tool Works is an Ohio corporation, and it wanted an injunction for no other purpose than the breaking of the strike. So, to get away from local atmosphere, it directed its lawyers to obtain a Federal injunction. Whereupon, lo and behold! the Niles-Bement Pond Company, a New Jersey corporation, became the plaintiff in the Federal courts of the State of Ohio against the striking molders, and the Niles Tool Works, the Ohio corporation, was named as one of the defendants. The complaint charged them all with the commission of acts entitling the plaintiff to an injunction,

pleading, among other things, that the Niles-Bement Pond Company was a New Jersey corporation. Therefore, there being a diversity of citizenship, the case was brought in the Federal court, although the Niles-Bement Pond Company might properly have asked for this injunction in the State court. Plaintiff alleged, also, that it was engaged in Government work, and that it was unable to deliver and comply with the Government contracts because of the strike.

The attorneys for the molders objected to the Federal court assuming jurisdiction on the ground that the Niles-Bement Pond Company was a monopoly and, further, that the Niles-Bement Pond Company, the New Jersey corporation, and the Niles Tool Works, the Ohio corporation, were engaged in a "frame-up" upon the strikers and like a snake, scotching itself in two, so as to make one part plaintiff and other part defendant, was thus giving the Federal court jurisdiction.

Upon the hearing it developed that the Niles-Bement Pond Company owned all of the common stock in the Niles Tool Works; that it owned the great majority of the preferred stock; that the president and vice-president of the two corporations were the same individuals, and that the majority of the directors of the Niles Tool Works were also the directors of the Niles-Bement Pond Company; that the lawyers of the two corporations were the same; that the lawyers who had been in charge of the strike on behalf of the Niles Tool Works had "abandoned" the Niles Tool Works to its fate as defendant, and had become the attorneys for the Niles-Bement Pond Company, the plaintiff, in order to give the court jurisdiction; in fact, had acted as attorneys for both sides; that ninety-five per cent. of the products of the Niles Tool Works was under the direct control of the Niles-Bement Pond Company; that the remaining five per cent. was left to the Niles Tool Works to contract for local production, but that the Niles-Bement Pond Company had complete control of said ninety-five per cent. of the production as well as preference; and that the Niles Tool Company was but a subsidiary company of the Niles-Bement Pond Company,—the Niles-Bement Pond Company being the contracting party with the Government, for which it charged ten per cent. of the total contract price, turning over the work of the Niles Tool Works. In other words, if the Niles Tool Works had contracted directly with the Government, the Government might have had its work done at ten per cent. less,—a clever sharp business scheme.

Now, the evidence failed to show that the Niles Tool Works had refused to join as a plaintiff,—a little flaw in the chain. Had the Niles Tool Works joined as a party plantiff, the action would have gone down for the reason that the Niles Tool Company was an Ohio corporation, and the Federal court thus would have been without jurisdiction; so they simply shifted the tail of the snake to the defendant and the head of the snake to the plaintiff to give the court jurisdiction.

The Federal judge granted the injunction, notwithstanding that showing. Counsel for the defense took the matter up on appeal. The evidence showed collusion of the worst order,—a damned "frame-up" for acquiring legal jurisdiction. So patent was it that the Circuit Court of Appeals could not stand for the camouflage and perjury. The court, therefore, dismissed the complaint and injunction for want of jurisdiction, saying in part:

"Naturally and normally, the two corporations would stand together in every way so far as their interests in this suit are concerned. That they do so stand together is affirmatively shown. The defendant company employed and paid the guards and watchmen, and the representatives of the two companies consulted together regarding the strike, 'how to manage it and how to get men into the foundry.' The defendant company seems not to have appeared of record in the suit; its works manager testified that he 'should say' that the counsel present at the trial (employed by plaintiff) represented both plaintiff and defendant company (presumably in reference to the conduct of the strike), that the witness had consulted with the attorneys named 'in regard to matters connected with this strike,' and that one of them represented the defendant company when one of the strikers was arrested, apparently during the strike now in question.

"The bill states that no case for relief against the defendant company and no such relief is asked, unless by the general prayer that the 'court grant plaintiff any and all other equitable relief which in equity and good conscience it is entitled to receive.' Indeed, plaintiff's control of the defendant company, and the complete harmony between them, renders relief at the hands of the court as against defendant company entirely unnecessary. It is equally clear that the interests of the defendant company and those of the individual defendants are wholly adverse to each other."

* * *

"The instant case is such as to make its failure for lack of jurisdiction unfortunate; but the conclusion that jurisdiction was lacking seems inevitable."

The court was, indeed, mild in its language,—letting these corporations and their hirelings off for their fraud upon the court. In the meanwhile, however, men were convicted of contempt because of the violation of an injunction that was obtained in a "frame-up" jurisdiction. Now that the court is found to be without jurisdiction, these convictions must naturally fall and be set aside. But how about the meanwhile? And while labor is thankful for the Appellate Court's decision in its favor, nevertheless more than a year elapsed between the granting of the injunction and its dissolution The result sought by the injunction was, in a large measure accomplished, for while courts are "scrapping" over jurisdictional questions, they have labor in between two stones, grinding it away.

Is not this the time and occasion to call the attention of the great leaders of the labor movement in this country to the fact that in this period of reconstructon, immediate, prompt, and sufficient attention be given—

1. To amending our Constitution so that all judges be elective and not appointive,—their term for a limited period only.
2. To limiting the powers of courts so as to keep them within the confines of democratic institutions.
3. To make it possible for labor to capture the courts.

ENGLAND RULED BY FOREIGNERS.

A correspondent in the London New Witness recently pointed out that "England is suffering from foreign domination." He wrote: "We are governed by the Welsh, prayed at by the Scots, and preyed upon by the Irish." From a note in the London Evening Standard the genuine native-born Englishman does not seem to have much to say nowadays. It writes:

"The Versailles Conference is considering decisions which may affect the fate of Great Britain for generations.

"A correspondent points out that on this conference our country is represented by:

"One Welshman (Mr. Lloyd George).

"One Scottish Canadian (Mr. Bonar Law).

"One Jew (Lord Reading).

"Four Scotsmen (Mr. Balfour, Sir Eric Geddes, Marshal Haig and Admiral Wemyss).

"One Englishman (Lord Milner).

"'Is this not,' he asks, 'a humiliating position for the country south of the Tweed—the so-called 'predominant partner'? England proper is said to contribute seventy to eighty per cent. of the men in the British Army, ninety per cent. in the British Navy, and about ninety per cent. of the British war-expenditure. Yet she has only one Englishman to make her voice heard at this crisis in her history."

Oddly enough—though The Evening Standard omits to mention it—the one Englishman cited, Lord Milner, was actually born in Germany and his father before him, since his grandfather, a physician, settled there, without losing touch with England or acquiring German citizenship.

"The power of wealth and of privilege can be successfully met by the people only by utilizing to the full extent the power of numbers; utilizing that power not only politically but industrially * * * Emancipation can come only through the utilization by the people not only of their power of production, but of their own purchasing power."—Louis D. Brandeis, Justice United States Supreme Court.

The skeleton of an average whale weighs about twenty-five tons.

A CANADIAN BOLSHEVIK.

A rich Canadian manufacturer, Mr. J. R. Booth, has recently refused to grant to his employes higher wages, and refused also to concede their request for Government arbitration. His action is made the occasion of interesting comment by the Ottawa Journal and the Toronto Globe. According to the Journal, Mr. Booth seems to reason thus: This is my mill, erected with my money, and managed by my brains; and I am going to do just what I please with it. But, inquires the Journal, what is the source of Mr. Booth's wealth, estimated to be about $30,000,000? It goes on to reply:

"Mr. Booth was licensed by the people of Canada to cut timber from the Crown lands of Canada—from lands that belonged to the people of Canada; Mr. Booth was given the use of certain rivers that belonged to the people of Canada to float lumber down to his mill; Mr. Booth was permitted to harness water powers on these rivers and subsequently electrify them for the operation of his mills; Mr. Booth was permitted to construct and operate a railway on lands that belonged to the people of Canada in order that he might market his lumber, a railway which he subsequently sold for a large sum to another railway corporation; Mr. Booth is to-day, under licenses granted from year to year—that is for twelve months' periods—cutting down trees on lands that belong to us all."

The clear inference is that Mr. Booth is a trustee of resources granted him by society, and that if this same society elects to establish in the Government a Ministry of Labor with power to arbitrate industrial disputes, Mr. Booth and his peers should out of thankfulness be glad to comply with its requirements, particularly since the Government gives no indication of a purpose to withdraw the privileges previously granted. The Globe calls the attention of Mr. Booth to portents more alarming. The world has changed much in his long lifetime, it says—to such an extent, in fact, that requests for arbitration from a body of workingmen seem "mild and reasonable" in comparison with "subversive doctrines being preached"—and no doubt it might add being put into effect in some countries—by revolutionists. The Globe speaks thus:

"Putting the argument even on the low plane of self-interest, is it not a grave error to spurn such a petition? Is it not playing into the hands of fanatics who scorn arbitration as the device of capital, and would use more violent weapons than the strike if they dared? Reason, justice, and prudence combine to urge employers to exhaust every expedient of conciliation in trying to avoid labor troubles."—The New York "Nation."

The world was not made in six days, nor in six years, nor in six thousand years, nor in sixty thousand years. The making of the world was a process of millions of years of evolutionary change and development.

The three essentials of life are bread, beauty, and brotherhood.—Edwin Markham.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Oppose Anti-Strike Law.

Opposition to any form of compulsory arbitration legislation was voiced by President Gompers before the Senate committee on education and labor which has under consideration a resolution by Senator Kenyon providing for an investigation of industrial and social conditions.

The trade-union executive said that any attempt by law to prevent men from quitting their employment would be futile.

"Of course," said President Gompers, "Congress can pass a law of this character, but it will be violated."

"Hide it behind any phraseology you will," said President Gompers, "when the law and the government of the country tell the worker 'you cannot leave this work,' that moment you have put the shackles on him."

Mr. Gompers declared that "organized labor is not going to take kindly to standing in line again for a piece of bread and a cup of coffee." He said that Congress should help by not allowing a rapid demobilization of the army to compete with the present labor of the country and taking the Department of Labor's conciliation branch more seriously.

"I should not say seriously," he added, "but Congress does take the Department of Labor suspiciously." Senator Kenyon interrupted to admit that it has been extremely difficult the past year to secure appropriations from Congress for the Department of Labor.

Food Costs Increase.

Food costs have increased 4 per cent. between August 15 and September 15, last year, reports the Bureau of Labor Statistics. Compared with September, 1917, the increase was 16 per cent.

An increase of 72 per cent. for all food combined is shown for the five-year period ending September 15 last. Every article for which prices have been obtained for this long period shows an increase of not less than 56 per cent. Six articles show increases of 100 per cent. or over; bacon, 100 per cent.; pork chops, 103 per cent.; potatoes, 105 per cent.; flour, 106 per cent.; lard, 109 per cent., and corn meal, 123 per cent.

Negro Education Urged.

The necessity for negro education is urged in a pamphlet issued by the Louisiana Department of Education. It is stated that while Louisiana pays more for the education of white children than any other Southern State, less money is expended on negro education than in any State in the Union. It is shown that in some sections of the State the Louisiana negro is not receiving for the education of his race the direct school taxes that he contributes.

"The dawn of a new day is upon us," it is stated. "We cannot look upon a twentieth century problem with nineteenth century eyes. It is time to put aside old doubts and fears and to espouse this thoroughly righteous cause.

"The glory of achievement in our white school system is marred by the pathetic and pitiable condition of our negro schools. Louisiana in the past 15 years has built up a system of schools for her white children that has commanded admiration and respect. Can she not, with the experience she has acquired, the means at her disposal, and the spirit to win, begin now to complete her crown of glory by completing the task she has so well begun and provide a school system for all of her children?"

Oppose "No-Strike" Law.

The Colorado State Federation of Labor will ask the State Legislature to repeal the "no-strike" law and substitute voluntary mediation and conciliation in the settlement of industrial disputes.

The workers also demand the repeal of the State constabulary law.

Other proposed legislation is:

Amendment to the workmen's compensation law, which will increase the compensation, allow a shorter waiting period. State insurance, and make it more easy of operation.

Repeal of the anti-boycott law.

Enactment of an anti-injunction law.

Amendment to the women's minimum wage law, with an appropriation of sufficient amount to put it into force.

Enactment of a car shed law.

Amendment to the child labor law, to make same apply to children in the beet fields.

The United Mine Workers of America have prepared three bills, applying to the working conditions of coal miners.

Liberty Bonds "Juggled."

In a report on causes that have led to the price decline of liberty bonds, Assistant District Attorney Brogan of New York shows how rich men escape the income tax and at the same time reap a rich harvest, through fictitious selling of liberty bonds.

The official states that in many instnces heavy investors in liberty bonds gave their brokers a selling order for anywhere from $500,000 to $1,500,000 worth of these bonds at the same time putting in an order to buy the same amount at the market price, thus establishing a fictitious loss to report on their income tax returns. The same method has been followed with other securities and probably with their own business enterprises, it is stated. The Government will lose millions of dollars income tax.

Object to Discrimination.

The National Federation of Federal Employes will ask Congress to repeal the law of 1917 which forbids transfers of Government emloyes at a higher wage or with promotion in less than one year.

The union declares that this discriminating legislation is a blacklist in some departments. The result has been that experienced Government workers, although needed on war work, even when transferred thereto, were denied the wage belonging to

World's Workers

Denmark's unions have added within the year 28,162 members, and now have a strength of 179,284, of which number 27,776 are women.

In Norway round figures show an increase of roughly 14,000 since last year, with a present total membership of 93,000. Although there were 559 industrial disturbances during the year, there were only 44 strikes, affecting only about 3,000 men.

As a part of the epidemic of labor disturbances now sweeping over Central and South America, news comes from Montevideo that a general strike is threatening. This fact has resulted in the government's calling upon the military forces under date of December 27th to be prepared for mobilization at any time against the strikers.

Central labor bodies throughout the Domnion of Canada are adopting strong resolutions calling upon the government to withdraw troops from Russia. Reference to the leaders of the Soviet Government always calls out enthusiastic applause at labor meetings. The sympathetic attitude to the workers' government of Russia is also spreading among Canadian soldiers.

Lord Leverhulme, one of England's most successful business men, is said to favor a six-hour workday as a panacea for industrial unrest. The theory upon which his proposal is based is that by working machinery longer hours, with shorter hours for those attending it, the product will be almost doubled, and the workers will be able to secure comforts and luxuries now undreamed of.

As per latest report received by the United States Department of Labor, the labor organizations in Great Britain have now a membership of nearly 4,000,000. In the year 1917, 3,682,000 members were represented in the so-called Blackpool Labor Parliament. Since that convention took place two great organizations have affiliated—the Amalgamated Engineers, with 280,000 members, and the Workers' Union with 260,000 members.

In Sweden, though wages are fairly high, the food shortage has been and is still severe; and it has been much more continuously "exposed" to Bolshevik propaganda than any other Scandinavian country. The extreme left of the Labor Party is now more or less openly republican and revolutionary; but the programme of the majority Socialists and labor unions, led by Hjalmar Branting, is strictly reformist. Apparently the real division is between the town workers, who are republican, and the agricultural workers, who are not.

The labor movement of Brazil has gone beyond the propaganda stage. The textile industry, the basis of the garment industry, centers in and around Rio de Janeiro, some of the largest textile mills in the world being located there. The workers, who are banded together in the "Union of Operatives," sent their demand to the manufacturers organized in the Centro Industrial de Brazil. The terms were accepted after some parleying, and the industry became organized. While wages are not mentioned, the principle of union recognition is definitely established, and thus an entering wedge secured. A weekly schedule of 56 hours is agreed to.

INFORMATION WANTED.

Hans Meyer, member of the Sailors' Union of the Pacific, who was last seen in Honolulu, T. H., on Feb. 17, 1914, is inquired for. Any one knowing his whereabouts, please notify Henry Capell, 51 South St., New York N Y —5-29-18

Members of the crew of the SS. "Fred W. Weller," at the time she salvaged the Norwegian barque "Gratia," November, 1918, should file their claim with me, as soon as possible, for their share of the salvage money, which I am taking up now on behalf of other members of the crew. ISIDORE A. RABINOW,
Attorney for Seamen,
277 Broadway, Room 401,
New York City.
1-8-19

Pacific Coast Marine.

The schooner "Sea Wolf," Captain Ira Eaton, has been taken to San Pedro for the purpose of being refitted preparatory to summer trade in Pacific waters.

After a trip of forty-nine days from the Columbia River, the motor schooner Sierra has arrived at Shanghai, according to advices received. She has a lumber cargo.

Preliminary work has been ordered on the new 12,000-ton dry dock to be built by the Portland Public Dock Commission. It is planned to complete the dry dock within a year.

Much repair work is being done at the Oakland shipyards now that the war rush is over. Boats that were operating during the period of the emergency are now being laid up for repairs.

All passengers arriving at Cordova, Alaska, are required to undergo quarantine detention for ten days at their own expense as a protective measure, because of the prevalence of Spanish influenza there.

San Francisco ship designers declare that the sudden desire on the part of the United States Shipping Board to alter the designs of steel freighters now in course of construction so as to develop better lines and higher speed is actuated by plans of English builders announced recently.

According to R. Z. Dickie, the English yards are preparing to turn out a number of steel freight refrigerator ships of a fifteen-knot speed to ply between British Isles and Australian ports. The progress noted in steel cargo-ship construction is that speedier ships are desired because of the better frieght rates they command.

The second ship being built at Bay Point will be launched some time next month. It will be a 9400-ton freighter, similar to the "Diablo," the first ship launched from the yards. The new vessel will bear one of the Indian names recommended by Mrs. Wilson. The "Diablo" is expected to be completed the latter part of next month and ready for her trial trip.

At the annual reorganization of the Seattle Port Commission Robert Bridges was elected president for the fourth time. He succeeds Judge C E. Remsberg, who was defeated for re-election recently by Dr. W. T. Christensen. Port Manager Hamilton Higday has resigned to accept a position with the Parr-McCormick Steamship Company in San Francisco.

San Francisco officials of the Cunard Steamship Company state that according to advices received from the head office, 40½ per cent. of the 1,101,446 American troops carried across the Atlantic in British vessels during the war had been transported in vessels operated by the Cunard Line. The vessels made 230 voyages with the American troops from the time war was declared until the armistice was signed.

The concrete steamship "Faith," now reported to be on the west coast, will not return to San Francisco in the near future, it was announced by W. Leslie Comyn. The vessel will load a general cargo along the west coast and then return to New York. It is possible that the "Faith" then will load for Europe and shipping experts of Europe then will have an opportunity to see the stone ship built for San Franciscans.

C. E. De Witt, manager of the R. J. Browne Company of Portland, Ore., during his recent visit to San Francisco, has established an office in conjunction with the Pacific Export Lumber Company at 112 Market street. The R. J. Browne Company handles the domestic business of the Pacific Export Lumber Co. and intends to put on steamers and handle lumber products in California ports. L. D. McDonald, an old-time lumberman, is in charge of the San Francisco office.

Twelve former freighters operated by the American-Hawaiian and Luckenbach Steamship companies have been taken over by the United States Army transport service and equipped as transports, with a combined troop-carrying capacity of about 20,000 men. All of these vessels were used in the South American trade before the war. Some were operated through the Panama Canal to this Coast. The taking over of this fleet for transport purposes will delay the extensive renewal of the former service to this Coast, it is believed.

That far from hurting the shipbuilding industry in the East Bay sections, the ending of the war will be the signal for the awarding of more than $56,000,000 worth of ship contracts to the Oakland yards, is the information that came to the United States Employment Bureau. The new work is private merchant marine work and is considerably in excess of the amount of Government contracts for armed vessels already canceled by the Government. It is estimated that exclusive of what contracts may come in between now and January of 1921, there are now in sight contracts enough to keep all the East Bay yards running at full time for at least two years.

The Marconi Wireless Company is arranging to conduct the same service for shipping men operating steamers that was in force before the Government took over the plants and the ship units were sold direct to the ship owners. Contracts are being entered into, said Pacific Coast Superintendent Arthur Isbell, that will relieve the operator of all care and worry. Ship outfits are either sold or leased and operators will also be supplied. The company is conducting a school of wireless telegraphy and young men who wish to become operators are now being enrolled. Isbell said there are now a number of vacancies to be filled in the classes.

Any hopes entertained that the crew of the missing Standard Oil tanker "George Loomis" might be heard from alive were abandoned when advices from Seattle announced that the steamer "Carlos" had arrived there with one of the tanker's small boats. The lifeboat was picked up six miles off Shelter Cove and contained no occupant. The boat's sea anchor was out and nothing was found in the craft except a code book. There was nothing to indicate the fate of the men who had been aboard. Officials of the Standard Oil Company say it is probable that an attempt was made to get ashore, for the lifeboats are lashed fast and would have gone to the bottom with the vessel as it foundered. The finding of the boat is accepted as conclusive evidence that the vessel went down and all on board were drowned.

San Francisco officials of the Toyo Kisen Kaisha have been advised that the "Persia Maru," which this company turned over to the United States Government for war purposes under orders from Japan, had left New York and would arrive in San Francisco about January 31, and will be dispatched from San Francisco for Japan and Oriental ports early next month. The "Persia Maru" was one of the first Japanese ships to be made ready and turned over for service to America. Its gun platforms were installed at Kobe and since its appearance in the Atlantic has been on the run between New York and France. The "Seiyo Maru," another of the Toyo Kisen Kaisha ships, was taken from the South American run and has also been in service across the Atlantic. According to late advices the "Seiyo Maru" is loading on the East Coast and will be in San Francisco about February 15. Whether she is to be dispatched to Japan or go to South America and then to Japan has not been announced. The addition of these two ships gives the Toyo Kisen Kaisha its fleet of nine regular passenger and freight steamers in the transpacific trade, together with a number of cargo ships.

One of the most important announcements touching on the future of Oakland's waterfront is made by Fred D. Parr, president of the Parr Terminal Company, to the effect that Hamilton Higday has resigned as manager of the port of Seattle to accept the position of manager of the Parr company's vast terminal project on the Oakland western waterfront. The announcement by Parr followed the receipt by him of the following telegram from Higday: "My resignation as manager of the port of Seattle has been accepted by the port commissioner. It severs relations, both intimate and successful, with the public port institution from its inception. The past year closes our $6,000,000 invested in the Seattle port, producing $2,000,000 in revenue on one-half million dollars in profits for the city in operation of docks and warehouses. Nevertheless, I have gladly joined the Parr Terminal Company." The employment of Higday as manager and general supervisor of the Parr Terminal Company means the development of the Oakland western waterfront of an industry almost equal in extent to that of the Bush Terminal in New York. The power company has a long lease from the city of Oakland to sixty acres of waterfront land in the Key System basin. The present plans of the company provides for concrete warehouses and docks flanking a warehouse site which will provide storage and transfer space for thousands of tons of freight. In securing Higday the company assures itself of the services of one of the greatest commerce engineers in the country.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

CHANTEY LORE.

Chanteys! How the mere mention of them makes us feel again the old and ever potent spell of the sea! What a flood of memories they bring back of the days when "we sailed o'er the waters so blue, with our royals set, and our skysails, too"!

Chanteys! We can just close our eyes and in fancy see ourselves once again on the heaving deck of a ship, and hear the sough of the wind through the shrouds, and the wash of the waves curling up under her bends. The reef in the main upper topsail has just been shaken out. All hands have tallied on to the halyard. Presently the mate sings out:

"Strike up something there, Bill."

And "Big Bill," the chantey-man, strikes up—

"A Yankee ship came down the river."

Up goes the yard, a foot a lick, to the rousing chorus, "Blow, boys; blow," every man Jack working his bellows for all they are worth. And the mate roaring like a bull tearing through a wire fence:

"Roll it, me thrushes; I love to hear youse. Leggo them to'gallant sheets. Up in the top, there—lighten up them downhauls. Go it, me hearties. Another pull there, bullies. Belay!"

Ah, those were the days when the cheering strains of a chantey sent the blood coursing a little faster through the veins of Johnny Haultaut; days the remembrance of which will always warm the cockles of an old sailor's heart.

All of which is apropos of a Mister R. R. Terry, who writes in the London Times on the subject of chanteys, and very entertainingly at that.

In support of his claims to be considered an authority on chantey lore the gentleman sets forth that his "ancestors have followed the sea as far back as can be traced." He further avers that he has "grown up with sailor shanties," that his "contact and familiar intimacy with all the recognized shanties go back as far as he can remember," and that he has "in later years compared, coordinated, and collected his boyish memories of the shanties with those of his very numerous sailor relatives and their respective circles of sailor acquaintances." To these already convincing credentials he adds that he has "lost no opportunity of collecting shanties from old sailors who worked in sailing-ships before the days of screw-steamers."

It will be noted from the foregoing quotations that Mr. Terry writes 'em "Shanties." Here is what he has to say in defense of that form of spelling:

"May I utter a protest against the pedantry which—because of a fancied derivation from *(un) chanté*—would spell it 'chanty' or 'chantey'? The result of such spelling is that out of every thousand landsmen 999.9 pronounce it 'tchahnty,' riming with 'auntie,' instead of 'shanty,' riming with 'scanty,' as every sailor always pronounced it. The arguments in favor of '*ch*anty' are plausible, but conjectural. Were it worth while, I could prove by arguments more plausible, less conjectural, and equally unconvincing that the word is derived from a negro shanty, or hut. According to the Oxford Dictionary (which, by the way, spells it *sh*anty) the word did not find its way into literature until 1869. That being so, surely it is more scholarly to spell it as the sailor always pronounced it."

We are more than half inclined to agree with Mr. Terry on the point raised by him, but all the leading dictionaries spell it "chantey" (pl. "chanteys"). And, to paraphrase a Spanish proverb, when the lexicographers won't, laymen can't.

Warming up to his subject Mr. Terry goes on to say—

"The shanty is dead on the sea. If it is to be revived on shore (as seems probable) it is imperative that, when the old melodies find their way into print, the sailor atmosphere and sailor traditions shall be faithfully reproduced. With the exception of Capt. R. H. Whall's 'Sea-Songs, Ships, and Shanties' (the only authoritative collection in print), there is no indication of this. Other collections than that of Captain Whall (unfortunately for us it deals only incidentally with shanties) are the compilation either of a sailor who is no musician or of a musician who is no sailor. The ideal combination of sailor and musician has yet to come."

"Secondly, I scent a public danger in the multiplication of editions by mere 'collectors.' Lacking nautical knowledge and experience, the 'collector' is too ready to accept bogus titles and bogus tunes, picked up from any stray sailor—often quite uneducated, and not seldom afflicted with the bemused memory of the octogenarian. The last factor is not, I think, sufficiently recognized. Most of the sailormen now surviving from the old windjammers are necessarily in their seventies or eighties. I have lately taken down shanties from a number of them, and in the matter of accuracy I noticed a great difference between their versions of well-known shanties and the versions of the same shanties sung to me when I was a youth, and when these old men's recollections were thirty years fresher. Indeed, one old fellow's memory played him such tricks that when he sang his version of 'A hundred years ago' I immediately recognized it as a *pasticcio* of three separate shanties, all well known to me. Even in the case of a sailor relative (seventy years old, but intellectually a young man) I notice differences between his present-day versions and those I noted down from his singing thirty years ago. The mere collector—'knowing naught of these things'—first catches his sailorman; takes down his comic mispronunciations and muddled melodies, and straightway puts them into print. Once in print an uncritical public accepts them as authentic and authoritative. And so one feels no surprise at eventually finding your correspondent alluding to 'shanadar' and 'whip jamboree' as if they were classics, though the real fact is that the first is an ignorant mispronunciation of the world-famous 'Shenandoah' (surely too well beloved to deserve so grotesque a disguise), and the other a garbled mixture of 'Santy Anna,' and Heaven only knows how many more tunes, with a title unknown to any sailor I ever met.

"Thirdly, I am constrained to warn a trustful public against the habit of a certain type of folk-song hunter of attributing nearly every old tune to some 'mode' or other. There are no end of shanties which (melodically) fulfil certain 'modal' conditions, but are, nevertheless, in a key. 'Homeward bound,' some of the 'Storm-along' shanties, and many others are unequivocally in a major key, but because they end on the modern dominant (which is the final of the eighth mode) the folk-songer labels them eighth (I beg pardon, I mean *hypomixolydian*) mode.

"Lastly, as one whose chief business in life is concerned with the old modes, let me beg of future 'collectors' to drop these Mesopotamian terms, no matter what peace and comfort they bring to the soul. I grant that they sound dreadfully learned as compared with mere numerals; but the latter have the advantage of being accurate designations, which the pseudo-Greek labels are not."

Mr. Terry's reference to the probability of a revival of the chantey on shore stamps him a real optimist. The same causes—steam and electric power—which operated to drive the chantey from the sea will, in our opinion, operate even more effectively against its ever gaining a footing on land. This because steam and electric power are so much more abundant on shore than they are afloat.

The chantey served its turn, and served it well, in a day when brawn and muscle furnished the only power for doing the hard work on board of a ship. Its function was to bring out the latent energy in men which always responds to the charm of music and song, and by its rhythm to time and coordinate the efforts of a gang of men jointly engaged in performing some given labor. But, with the substitution afloat of steam-power for hand-power the chantey, as an aid to seamanship, automatically became obsolete. To-day it is but a memory cherished by a few survivors from the old tall-water school of sailors. Soon they will all have passed away, and then the chantey will be of interest only to the historian and the archeologist.

THE I. S. U. CONVENTION.

The twenty-second annual convention of the International Seamen's Union of America convened in Galveston, Tex., on the 20th inst., and is now in session in that city. The Pacific district of the union is ably represented at the convention, though the absence in Europe of Comrade Furuseth will no doubt be keenly felt by the delegates. He has been such a consistent attendant at previous conventions, from the first one to the last, and has taken such a leading part in the deliberations, that a seamen's convention held without him is very much like the play of Hamlet without Hamlet. However, he is performing a vastly greater service for American seamen—aye, for the seamen of the world—by staying in Europe just now than he could possibly do by attending the convention in Galveston.

Secretary-Treasurer Hanson, of the I. S. U. of A., has received a cablegram signed by Furuseth and Havelock Wilson, apprising him that an "international seafarers' conference" will open in London on February 24th, and remain in session several days. American seamen's unions are urged to be well represented at the conference. The chief topics for discussion will be the Seamen's Act, and the equalization of wages for seamen of all nations.

As Comrade Hanson is attending the convention in Galveston he will undoubtedly place the matter before the delegates. The application of the Workmen's Compensation Act to seamen is another matter that will claim the attention of the delegates. The proceedings of the convention will be printed in the JOURNAL as soon as they are available.

Give everybody in the world a stake in it, and there will be no need of a league of nations to keep the peace.

Why is a ship like a lady's watch, Bill? Because she is always out of repair.

CAPTAIN DOLLAR EXPLAINS.

The storm of criticism which has been raging for weeks over Captain Dollar's part in awarding a $32,000,000 shipbuilding contract to the Chinese government has evidently gotten under the old gentleman's hide. At any rate he is out with a public explanation of the deal which is decidedly apologetic in tone. Says the Captain:

"The public seems to have acquired the impression that those eight steel cargo vessels are being built in China for the Dollar company. The truth is that the freighters, like those being built at Kobe, Japan, are solely for the Shipping Board. We have placed no orders in China for ourselves, and will not build any ships until the present cost of construction has been cut in half."

He further assures us that the Shipping Board did not place the order with the Chinese government for the purpose of saving money by having the ships built by cheap Oriental labor. The cost of building vessels in this country and China is, it seems, practically the same. No, the contract was awarded to the Chinese with the sole idea of an early delivery of the ships, our own shipyards already holding enough contracts for work to prevent their accepting any more orders for some time to come.

The Dollar company, the Captain informs us, acted only as agents for the Chinese government in the matter of putting the deal through at Washington. In that capacity also the company was instrumental in buying in this country enormous supplies of steel and other materials, and shipping them to China for use in the construction of the ships in question. To quote:

"We have spent close to $30,000,000 for supplies in this country which was turned over to us by the shipbuilding authorities at Washington in payment for the vessels."

Finally, Captain Dollar points with justifiable pride to the fact that so high is the integrity of the Dollar company in the estimation of the Chinese that no bonds or other security were required of the agents in the handling of the huge sum.

All of which the JOURNAL cheerfully publishes. Now, if the doughty Captain would only come to bat with an equally frank statement giving his real, lowdown, honest-to-goodness reasons for preferring Chinese seamen to white seamen, and the British flag to the American, the JOURNAL would be even more pleased to publish that.

The unexpected did not happen, the French proverb to the contrary notwithstanding. District Attorney Chas. M. Fickert has been duly and liberally whitewashed by the San Francisco Grand Jury. Not a trace of the naughty, naughty things charged against him in the Densmore dictaphone report could now be discovered with a microscope.

Ah, the beauty and power of whitewash! Like charity it "covereth a multitude of sins." It even beats white lead, and we have it on unimpeachable authority that

"A little putty and white lead paint
Will make the devil look a saint."

Yea, bo; though your sins be as scarlet, yet shall they be white as snow. About a quart of good whitewash will do the trick. Mr. Fickert probably had a barrelful applied to him by the Grand Jury. He needed it.

The reactionaries, like the poor, we have always with us.

SEAMEN LOSE THEIR CASE.

United States Supreme Court Hits the Seamen's Law Below the Belt Once More.

Last week the Journal reprinted in full the majority and minority opinions of the United States Supreme Court in the "Talus" case. Below will be found the court's majority and minority opinions in the "Rhine-Windrush" case The two cases are practically identical in status, differing only to the extent that the "Talus" is a British ship, while the "Rhine" and the "Windrush" are American ships.

It will be noted that the court ran true to form again, deciding against the seamen with the usual majority of one.

Majority.

SUPREME COURT OF THE UNITED STATES.

Nos 393 and 394.—October Term, 1918.

Paul Neilson et al. Petitioners, 393, vs. Rhine Shipping Company, Claimant of the Sailing Ship "Rhine."

John Hardy et al., Petitioners, 394, vs. Shepard & Morse Lumber Company, Claimant of the Barkentine "Windrush."

On writ of Certiorari to the United States Circuit Court of Appeals for the Second Circuit.

[December 23, 1918.]

Mr. Justice Day delivered the opinion of the court.

These cases were considered together in the courts below and may be disposed of in like manner here.

The facts are:

In the first case Paul Neilson and nine other seamen sue for the recovery of wages claimed to be due them from the bark "Rhine." It appears that they shipped on the American bark "Rhine" at Buenos Ayres, October 7, 1916, for a voyage to New York, at the rate of $25 per month. It is stipulated that the shipping of seamen on sailing vessels at Buenos Ayres is controlled by certain shipping masters, to one of whom the libelants, in accordance with the usual custom and as a means of securing employment, signed a receipt or advance note for one month's wages. These advance notes were presented to the American Vice-Consul at Buenos Ayres before the libelants signed the articles, were by him noted on the articles and, in the presence of the libelants, directed to be paid on account of the wages of the respective libelants. It was further stipulated that in directing the master of the "Rhine" to honor such advance notes, the Consul was acting in accordance with Section 237 of the Consular Regulations of the United States. When the bark arrived at New York the libelants were paid the wages earned, less the $25 advanced. They now seek to recover the sum thus deducted, by virtue of the terms of Section 10 (a) of the Act of March 4, 1915, entitled an "Act to Promote the Welfare of American Seamen in the Merchant Marine of the United States," which declares such advances to be unlawful and of no effect.

The facts in relation to the case of the barkentine "Windrush" differ from the above only in respect of the fact that the advance notes are not in evidence, but are noted on the articles.

The District Court decided in favor of the libelants. 244 Fed., 833. The Circuit Court of Appeals reversed the decrees. 250 Fed., 180. The cases are here on writs of certiorari.

The section of the statute is the same as that involved in the case of the "Talus," No. 392, just decided. The difference is that the advances were made by the master of an American vessel in a South American port, whereas in the "Talus" the advancements were made to foreign seamen in a British port. The same general consideration as to the interpretation of the statute which controlled in the decision of the case of the "Talus" are applicable here and need not be repeated.

That American vessels might be controlled by Congressional legislation as to contracts made in foreign ports may, for present purposes at least, be conceded. It appears that only by compliance with the local custom of obtaining seamen through agents can American vessels obtain seamen in South American ports. This is greatly to be deplored, and the custom is one which works much hardship to a worthy class. But we are unable to discover that in passing this statute Congress intended to place American shipping at the great disadvantage of this inability to obtain seamen when compared with the vessels of other nations which are manned by complying with local usage.

The statute itself denies clearance papers to vessels violating its terms. This provision could only apply to domestic ports and is another

(Continued on Page 10.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Jan. 20, 1919.
Regular weekly meeting came to order at 7 p. m., Joe Faltus presiding. Secretary reported shipping medium. Balloting for officers for the ensuing term was proceeded with.

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., Jan. 13, 1919.
No meeting; shipping slow; members scarce.

J. ETCHELLS, Agent.
Room 11, de Cosmos Block, 1424 Government Street.

Vancouver, B. C., Jan. 13, 1919.
Shipping slack.

W. G. MILLARD, Agent.
58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, Jan. 13, 1919.
No meeting. Shipping and prospects medium.

H. L. PETTERSON, Agent.
2016 North 30th St. Tel. Main 808.

Seattle Agency, Jan. 13, 1919.
Shipping dull.

P. B. GILL, Agent.
84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, Jan. 13, 1919.
Shipping slack.

ED. ROSENBERG, Agent.
P. O. Box 280. Tel. Main 557.

Portland Agency, Jan. 13, 1919.
Shipping medium; prospects uncertain.

JACK ROSEN, Agent.
88½ Third Street. Tel. Main 6013.

San Pedro Agency, Jan. 13, 1919.
Shipping fair.

HARRY OHLSON, Agent.
128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, Jan. 6, 1919.
Shipping poor; prospects poor.

JACK EDWARDSON, Agent.
P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Jan. 18, 1919.
The regular meeting of the Marine Cooks and Stewards was called to order at 7 p. m., Ed. Andersen in the chair. Secretary reported shipping slow.

E. F. BURKE,
Sec'ty. Pro Tem.
42 Market Street. Phone Kearny 5955.

Seattle Agency, Jan. 8, 1919.
Agent reported shipping fair. W. Mitchell was elected Agent pro tem.
Grand Trunk Dock, Room 203, P. O. Box 214. Phone Main 2233.

San Pedro Agency, Jan. 8, 1919.
Agent reported shipping slow. Few men ashore.

JOE MACK, Agent.
Sepulveda Bldg., 128½ 6th St. Phone Home 115; Sunset 66W.

DIED.

J. W. Antonius Johanson, No. 1186, a native of Finland, aged 43. Died at Eureka, Cal., Jan. 13 1919.

John Ohls, No. 115, a native of Finland, aged 69. Died at San Francisco Cal., Jan. 18, 1919.

Gustaf A. Wiren, No. 316, a native of Finland, aged 62. Died at San Francisco, Cal., Jan. 13, 1919.

Captain Charles W. Saunders, chief of the San Francisco recruiting service for the Government free schools of navigation and marine engineering, has issued an appeal to the young men of this district to do their duty to the Government by associating themselves with the opportunity to train for positions as officers of the merchant marine. He said: "We need more men to enter our free navigation and marine engineering schools to train for their license as deck and engineer officers in the American merchant marine. You are qualified for the deck school if you have had two or more years' sea service, and for the engineering school if you have had a certain amount of mechanical or engineering experience, not necessarily at sea."

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Washington, Jan. 10.

From every corner of the United States, delegates of local unions and central labor bodies are on the way to Chicago, to the labor congress which was substituted for the proposed general strike in support of the demand that new and fair trials be given Tom Mooney and Warren K. Billings. In that labor congress—the first to be held in America directly representing the rank and file, rather than the international trade unions—it now seems certain that a great historical decision will be reached.

The indications point to the committing of American labor to a policy of vigorous independent action henceforth, for the defense of the civil rights of the men and women who work for wages. Those civil rights will be defined. Probably the delegates will adopt a declaration that all useful workers are entitled to security of employment, a comfortable living wage, democratic management of industry, and a proportional representation of labor in every branch of the Government—and will adopt methods for securing those rights in spite of any opposition.

The idea that organized labor can secure complete freedom of speech, of the press and of assemblage before it gains its proportion of political and governmental power is rapidly dying out. It received a severe blow within the past month, when the city government of McKeesport, Pa., refused to permit a meeting there under the auspices of the American Federation of Labor, on the ground that the A. F. of L. is in the same class with anarchists and other "undesirables." Exactly that attitude is held by many associations of employers in cities of New England to-day, although few of them are still safe in declaring it. That is why the Labor Party idea is taking root and growing in the East and South as well as in the West. It offers the one chance the workers in industrial towns may have to establish their right to meet and discuss industrial and political and social problems, where autocratic employers now control the police power.

When the labor congress reaches Chicago it will be greeted by the New Majority, the weekly paper which the Labor Party has established to fight the battles of the working class in that part of the country. In its introductory article, this new paper says:

"Foremost of the propagandists in the interest of special privilege are the newspapers—subsidized by millions of dollars worth of advertising given them by the food trusts, State Street stores, telephone, gas and electric companies and other profiteering and franchise-seeking corporations.

"In return for the tribute they levy, the newspapers color and distort the news of the day, dispense editorials devised in the interest of the powers that rob the workers, and otherwise seek to keep the public in ignorance and in such confusion as will prevent an uprising at the ballot box to capture the power of government for the great majority.

"The special business of the New Majority will be to combat this big business propaganda of the newspapers."

Basil M. Manly, joint chairman of the National War Labor Board, presiding today at the labor session of a national reconstruction conference called by the National Popular Government League, said that the United States is rapidly approaching a perilous crisis. He said that there are groups of "anarchistic employers" throughout the country who are deliberately seeking to provoke a vast industrial conflict, just at the time that our soldiers and war workers are being demobilized. They are defying every obligation of patriotism and common humanity, in the desperate attempt to gain a selfish advantage over the wage workers.

One instance he mentioned was the strike of harbor boat workers in the port of New York, where the employers had for more than a month been preparing to force out the union men and to bring on the terrible conditions which exist there to-day, in which the lives of all the babies among five millions of people are endangered. He said that the whole blame was upon the boat owners—a mere handful of autocratic men—who had refused to consider any possible plan of arbitration.

Another instance was a cotton mill strike, in which the employer informed the War Labor Board that the strikers were in the hands of "Bolsheviki and I. W. W." Manly discovered that the agitator to whom the boss referred was a detective, planted in the union by the boss himself!

"These refusals to arbitrate, where the livelihood of a hundred thousand families and the lives of many thousands of babies are at stake, and these attempts to provoke violence by means of detectives planted in the shops," said Manly, "are the sort of thing that is driving this nation to the brink of trouble the end of which no man can foresee."

Louis F. Post, who followed Manly, asked why these employers, who shouted so loudly about the flag during the war, and were compelled to hold their avarice and anarchistic tendencies in check, should not be held in the same restraint in time of peace.

"Is there no such thing as patriotism in time of peace?" he demanded. The audience answered with a thunder of applause.

William H. Johnston, president of the International Association of Machinists, declared that American labor, and particularly the men who have fought the fight in khaki or in the war industries, was serious about making the whole world safe for democracy. By democracy, he said, the workers mean equal opportunity to life, liberty and the pursuit of happiness. That means the right to a job, first of all. Labor to-day demands of its Government the assurance that jobs will not be lacking, and that the jobs shall be such as Americans can with self-respect carry on. They will insist that these jobs and conditions, including democratic control of the industries, be forthcoming.

These speeches were made to a crowd of college professors, economists, war workers, Government officials, publicists, and representatives of various farm organizations. The crowd approved.

Henry Sterling, legislative agent of the American Federation of Labor, issued an even sharper warning yesterday, in a speech to the House Committee on Public Buildings and Grounds, when he denounced the Reed bill, which proposed to abandon work on the Government housing projects in a score of cities. The bill is now dead; the houses will be completed. Sterling told the Congressmen that the working people have grown resentful "of the almost contemptuous neglect" which Congress has given the measures in which the workers are interested. He told them that they might well look across the ocean and observe the "red cloud" that is growing and casting its shadow farther and farther westward. If they were men willing to exercise forethought they would take action now which would prevent the growth of that resentment among the workers here.

Frank P. Walsh has resigned from the American Alliance for Labor and Democracy, of which he was one of the executive committee. He states that he resigned because he had been unable to get time to take part in shaping its work. Reports in Washington seem to indicate that the particular point upon which he broke with the Alliance was its recent agitation against labor redicalism in America and its opposition to the Russian Soviets.

Russia's working class revolution has inevitably become an issue before every labor body in America. The demands made by progressive members of the Senate for an explanation of the keeping of American troops on Russian soil have been promoted by central labor bodies in various industrial centers. The two great independent telegraphic news services that have recently swung over to the side of working-class Russia, and are demanding that the old aristocracy shall not be restored to power by American bayonets, did not take that stand until they discovered the trend of labor opinion. The past week has witnessed the complete turning of the tide, with the announcement that all British troops are to withdraw. A big national movement to secure "The Truth About Russia" is being born. So far as the anti-Soviet press campaign is concerned, henceforth it is likely to be confined to about the same class of publications that denounce the union shop and the Federal Trade Commission.

One of the big causes of the swing of public opinion away from the fear and hatred of labor radicalism at this moment is the discovery that unemployment is going to be a local danger this winter in many sections of the United States. The Labor Department has received telegraphic reports for the past week, indicating that twelve States now have a surplus of common labor, as compared with only seven States a week ago. The twelve are California, Colorado, Idaho, Illinois, Indiana, Iowa, Missouri, Montana, Nebraska, North Dakota, Oregon and Utah. With increasing pressure of unemployment, the public is interested in opening up new jobs; so long as there is unemployment the persecution of labor organizers is a dangerous pastime.

An attempt will be made by the labor congress in Chicago to draft a new program for American Labor, to meet the emergency of this reconstruction period. The Labor Party is making a similar attempt. Unless detectives and provocative agents are planted in the labor congress and in the Labor Party, it is likely that the two movements will come to a com-

plete understanding, and that they will unite for action. The first point upon which they can unite will be the stubborn defense, henceforth, of the right of every man and woman in the labor movement to seek to better the condition of the workers as a class by speaking or writing what they believe to be the truth regarding industrial and social wrongs, here or abroad.

The calling of names will not frighten either that labor congress or the Labor Party.

WHALE-STEAKS.

Americans are learning to like whale meat. Other nations have always liked it, but we are slow to adopt what we consider foreign foods, although there is nothing particularly foreign about the whale. The Food Administration is responsible for our early attempts at eating whale, but, according to a writer in The Scientific American (New York, November 16), our liking bids fair to grow and spread after the emergency that gave rise to it has passed. During the war the production of whale meat has enabled us to keep the usual supply of domestic animals nearly normal and has released ample meats of other types for the maintenance of our military and naval forces. Plants for preparing whale meat, storage-houses for keeping it, and vessels for its distribution, are now scattered along the North Pacific coast. Seven stations have thus disposed of about one thousand whales this season—all of which we have eaten. Readers who have never knowingly consumed whale are invited to reflect on the fact that it tastes remarkably like beef. The original owner of that luscious steak you ate last night may possibly have swum the North Pacific instead of galloping about on the grassy plains of Texas. We read:

"The meat of the whale extends in great masses from the base of the skull to the tail fin and downward to the middle line, or completely over the rib section. This meat, all of it of the same quality, amounts to ten tons for each fifty feet of length and each fifty tons gross weight of the whale. Above these dimensions there may be fifteen tons of solid whale flesh of best eating quality. In other words, one-fifth of a whale is meat, without computing the other parts, such as the heart, etc., that are edible. The steer, being also a mammal, with nearly identical skeletonic structure, represents almost precisely the same proportions. That is to say, a steer weighing 1,000 pounds has 200 pounds of beef, but only a proportion of its meat of the first class such as characterizes nearly the whole whale flesh. A 50-foot, 50-ton whale, then, represents in bulk a herd of 100 steers of one-half ton weight each. He represents as much meat also as the herd. He is also equal to 500 sheep of 200 pounds each or to 300 hogs of 350 pounds each.

"Of course, steers range up to a ton of weight, with a corresponding increase of weight of flesh. But a whale also weighs up to 75 tons, representing a herd of 150 steers of a half-ton weight each. Any way you look at it, the whale has advantages over beef cattle. He requires no herdsmen or cowboys to care for him. He and his wife rear, feed, and guard their own young without any assistance from laborers. There is no cost to any one to feed him or his family; no food, clothes, or fuel to buy, with corresponding labor to produce them. When wanted, the whale is in his given haunts, ready to be taken. No butchering is required for him, the harpoon gun lands the fatal stroke. All you have to do is to haul him out and cut him up. The cost of whatever processes are required to put a whale on the market is so small in comparison with that of breeding and rearing a steer that Americans, like the Japanese, will soon have meat as good as the best parts of beef at probably not over fifteen cents per pound and in as large quantities as any family needs. . . .

"A whale is a mammal, not a fish. It produces its young alive and suckles them the same as a cow. Its flesh looks like that of beef, although admittedly a little coarser in texture, and it has a slight flavor of venison. Whale steaks and roast whale have been served in several of the leading New York restaurants for some time past, having had a preliminary test at Delmonico's restaurant. New York chefs have developed the best methods of cooking and serving, and have found that it yields to as many forms of preparation as beef. There is little to distinguish it from beef, when served on the table, either in appearance, aroma, or taste. Many would be deceived into thinking it beef if not told what had been served. It is only in America that whale meat is a novelty. In Asia and elsewhere whale meat is the staple food.

"Whale meat has every advantage over beef—mutton—pork. In the first place, the whale is a diseaseless mammal, and its salt-water habitats contribute to its freshness, cleanness, digestibility, and healthfulness as food. On the contrary, cattle are subject to tuberculosis and foot-and-mouth and other diseases more or less communicable to humans. As an example, according to the statistics issued by the University of California, a billion pounds of pork are annually lost to America from hog-cholera. Sheep are subject to foot-and-mouth and other diseases. Disease also is destructive to immense numbers of the poultry and domestic food-bird families. In brief, we have diseased meats of all descriptions, if bred on land, and no diseases to worry about if bred in salt water. The meat of the back of the whale further differs from that of all other edible mammals, in that it is uniform, that is, all roasts and steaks, and also boneless. Its sirloin section, of some ten tons, is entirely lacking in those tough, cheap, and nearly inedible parts characteristic of beef, which some of us have to consume or go without meat because of the cost."

In conclusion, the writer quotes Dr. Roy C. Andrews's book on "Whale Hunting with the Camera" to the effect that few people realize the great part whale meat plays in the life of the poorer Japanese, who cannot afford to buy beef. For shipping purposes it is cooked in great kettles, canned, and sent to all parts of the empire.

The union label signifies merit in an article to which it is attached, as it guarantees good, clean workmanship, as well as sanitary conditions and fair treatment by employers.

FOUNDATIONS WITHOUT EXCAVATIONS.

In the novel method of making building foundations developed in France and Belgium by Louis Dulac the ground is compacted without excavation, by means of a pile-driver, and the holes so made are filled in with stones or other material, which in turn are made solid by compression. On the bases so prepared the building supports or columns are placed. A special pile-driver is used, and this has three hammer heads, designed respectively for perforating, packing and finishing. The perforating hammer, which is thirty-three inches in diameter and weighs two and one-half tons, is conical, with a point of high-grade steel. The packing hammer, three or four inches smaller and cup-shaped, is of cast iron. The finishing hammer has the form of a truncated cone, but, unlike the other, is worked with the large end downward. The hole is bored until the hammer penetrates with difficulty. Tamping then gives vertical and lateral compression, and a concrete mixture thrown in tends further to flatten out the hole's bottom and spreads outsideways. A solid block is thus formed, with a broad under surface resting on well-consolidated ground.

The union label is the medium through which the public may enforce its rightful power of arbitrament between employer and employe.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.
2. Free schools, free text books and compulsory education.
3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.
4. A work day of not more than eight hours in the twenty-four hour day.
5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.
6. Release from employment one day in seven.
7. The abolition of the contract system on public work.
8. The municipal ownership of public utilities.
9. The abolition of the sweat-shop system.
10. Sanitary inspection of factory, workshop, mine and home.
11. Liability of employers for injury to body or loss of life.
12. The nationalization of telegraph and telephone.
13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.
14. Woman suffrage co-equal with man-suffrage.
15. Suitable and plentiful playgrounds for children in all cities.
16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.
17. Continued agitation for the public bath system in all cities.
18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.
19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER

(Continued from Page 3.)

such work. At the same time new and inexperienced appointees, brought in by the ten-thousand, have received a wage, at entrance, higher than the experienced workers were allowed.

The union makes it clear that it does not contend that the new workers were overpaid, but it protests against the generally low wage scale in the Government, and especially against the injustice of holding down the pay of experienced workers.

With the competition of better paying work outside, the Government could never have held these workers through the war, it is claimed, had not the departments resorted to the blacklist plan, which stigmatized as unpatriotic any employe who resigned, even though he was paid less than $2 a day. The union asks for the removal of all restrictions on transfers after six months' employment.

New Minimum Wage.

The new wage order for women and minors, issued by the California Welfare Industrial Commission is now in effect. Ten dollars for a 48-hour week is the minimum wage to be paid an experienced woman or minor. Six months' work means experience for an adult woman and nine months' work for a minor. For part-time work the rate is 25 cents an hour for both experienced adults and minors. Adult learners, entering employment at 18 and over, are to be paid not less than $8 a week for the first three months, $9 a week for the second three months and are then considered experienced workers.

Minor learners beginning under 18 years of age are to be paid not less than $7.50 a week for the first three months; $8 per week for the second three months; $9 a week for the third three months, and are then considered experienced workers. If the output of the female minor equals the average output of adult women, such minor must be paid the adult rate. For part-time work at $7.50 learner will be paid not less than 20 cents an hour; an $8 learner not less than 21 cents an hour, and a $9 learner not less than 23 cents an hour.

The percentage of learners allowed is not to exceed 25 per cent. of the total number of employes.

For work on commission, bonus, or piecerate, earnings are to be not less than the minimum time rate of the wage group in which the worker belongs.

Wants to Hold Railroads.

Before a Senate committee Director General of Railroads McAdoo urged that the Government hold the railroads for five years after the declaration of peace. The present law provides that the railroads shall be returned to their owners 21 months after the declaration of peace.

The Director General insisted that a program of improvements could be carried out in five years. In defending the loss of revenue under Government control he said that the people had not lost -that only through Government control and quick transportation of troops and supplies was the war's successful end possible. He said that the service rendered should not be overlooked. Attention was called to the fact that the Government will operate steamships for five years, and the witness asked how could that be a success if railroads are under private management.

Five-Hour Day Best.

Prof. Hobhouse, of the London school of economics, takes little stock in the claim of some brain workers that they labor eight hours a day and longer. This claim is often used by the opponents of the eight-hour day for industrial workers. Prof. Hobhouse says:

"When asked my personal view of the eight-hour question I begin with my own experience.

"I have worked with my brain as hard as another for the best part of a lifetime; but since boyhood I have never done a regular eight-hour day. The simple reason is that I get my maximum output on a five-hour day or thereabouts, and you would find many brain workers who, if they kept careful count, could tell you the same thing.

"There are, indeed, some very tough subjects who can do a good deal more. I knew a legal luminary who told me that he worked at least 12 hours a day and then read metaphysics in his armchair. But I never thought his metaphysics were very good. Darwin, who could hardly be accused of intellectual slackness or inefficiency, did four hours a day regularly. And I remember the late master of Balliol saying that he considered five (my figure) a good allowance for a normal reading man. So when manual workers demand an eight-hour day it is certainly not for the likes of me to accuse them of slackness."

Back to the Good Old Days.

Writing in the Annalist on reconstruction, Prof. Charles W. Gerstenberg harks back to the good old days of the survival of the fittest. He writes:

"As a means of protection in unnatural circumstances, trade unions and collective bargaining may justify their existence and they may still justify their existence to some extent in a revised structure. But, fundamentally, they are not based on the law of the survival of the fittest, but on a rule of the survival of the average."

In line with the theory of the rule of the strong, scientific management is favored.

The writer is professor of finance of the New York School of Commerce, Accounts and Finance.

Ford Raises Wages.

A new minimum wage scale of $6 a day, a flat increase of $1 a day, for approximately 28,000 employes throughout the country has been announced by the Ford Motor Company. It is stated that 23,000 other employes of the Ford interests already receive $6 or more a day.

Following this statement comes the announcement that a 200 per cent. dividend has been declared by the company. Further dividends are expected to be declared within a short time. The Ford family own 58 per cent. of the company's stock.

Henry Ford has resigned as president of the Ford Motor Company and his son, Edsel, has been elected to succeed him at a salary of $150,000 a year. The new official is 24 years old.

SEAMEN LOSE THEIR CASE.

(Continued from Page 7.)

evidence of the intent of Congress to legislate as to advances made in our own ports.

Affirmed.

Minority.

SUPREME COURT OF THE UNITED STATES.

Nos. 393 and 394.—October Term, 1918.

Paul Nielson, et al., Petitioners, 393, vs. Rhine Shipping Company, Claimant of the Sailing Ship "Rhine."

John Hardy et al., Petitioners, 394, vs. Shepard & Morse Lumber Company, Claimant of the Barkentine "Windrush."

On writs of certiorari to the United States Circuit Court of Appeals for the Second Circuit.

[December 23, 1918.]

Mr. Justice McKenna, with whom concur Mr. Justice Holmes, Mr. Justice Brandeis and Mr. Justice Clarke, dissenting.

These cases were submitted with Nos. 361 and 392, and, like them, are proceedings in admiralty under the Seamen's Act of 1915, 38 Stat., 1165-1168.

The facts are set out in the opinion of the court. In these cases, as in others, we are constrained to dissent. The principle of decision should be, we think, that declared in our dissent in the "Talus," ante, p. —. The facts of these cases put more tension upon it, that is, an adhesion to the words of the statute as determinative of its purpose rather than some of its consequences. We have here the somewhat appealing force of a picture of an American ship only able to escape practical internment in a foreign port by a violation of the law, if it be as we have declared it. And this under the sanction of the United States Consul acting under the following regulation of the Department of State:

"237. Advances to Seamen Shipped in Foreign ports cannot be considered as within the intention, and hence not within the proper construction of the Act referred to in the next preceding paragraph [inserted in the margin].* The final clause of the Act, which declares that this section shall apply as well to foreign vessels as to those of the United States, and that in case of violation a clearance shall be refused them, is a clear indication that Congress did not in this section refer to the shipment of seamen in foreign ports, but had in view acts done in the United States alone. The provision of the statute as to payment of advance wages is not intended to apply to seamen shipped in foreign ports."

We are unable to assent. We regard the act of Congress as clear and that the theater of its injunction is the harbors of the United States. It is misleading to dwell upon the jurisdiction of other places, which is but another name for control. The jurisdiction, control, is in and by the United States and the command is that advances shall not be deducted from wages of seamen on vessels, American or foreign, while in the waters of the United States. Where they were made or under what circumstances made are not factors in judgment. They are the mere accidents of the situation and if they reach the importance and have the embarrassment depicted by counsel, the appeal must be to Congress, which no doubt will promptly correct the improvidence, if it be such, of its legislation. We have already expressed our view of the control of the language of the law and that it is a barrier against alarms and fault-finding.

It hence follows that we are of opinion the judgment of the Circuit Court of Appeals in each case should be reversed and that of the District Court affirmed.

* "236. No Advance Wages.—Except in case of whaling vessels, it is not lawful to pay any seaman wages before leaving the port at which such seaman may be engaged in advance of the time when he has actually earned the same, or to pay such advance wages to any other person, or to pay to any one except an officer authorized by Act of Congress to collect fees for such service, any remuneration for the shipment of a seaman. If any such advance wages or remuneration shall have been paid or contracted for, the Consul, in making up the account of wages due the seaman upon his discharge, will disregard such advance payment or agreement and award to the seaman the amount to which he would be entitled if no such payment or agreement had been made. Nor should Consuls permit the statute to be evaded indirectly, as by part payment in advance and then stating rate of wages too small. R. S. Secs. 4532, 4533; 33 Stat. L. 55, Sec. 10; 24 Id. 80, Sec. 3; 27 Fed. Rep. 764."

According to shipping men the influenza has sadly affected the copra crop of the South Pacific this season and from now on there will be little or no shipments of this staple unless matters change. It is reported from Wellington and other ports where the small trading vessels arrive with the results of their voyages, that there are so few natives well and in condition to work the plantations that the nuts are scattered about the ground and not touched except in a few rare instances. The result is that a number of vessels are expected to return to San Francisco in ballast on account of the lack of cargo. The situation has seriously affected the operators of the small sailing vessels who had done a flourishing business at high rates during the past few years.

ALASKA FISHERMEN'S DEATH LIST.

The following list of members of the Alaska Fishermen's Union who died during the year 1918, has been compiled by I. N. Hylen:

Name	No.	Nativity	Age	Died, where and when—		
Allison, Morris	904	Sweden	26	San Francisco, Cal.	May	6
Andersen, Anton	910	Norway	34	Port Townsend, Wash.	Oct.	26
Anderson, Alf. F	850	Sweden	44	Portland, Ore.	Oct.	23
Asklund, August E	604	Sweden	43	San Francisco, Cal.	Nov.	4
Bohn, J. F	736	Finland	32	Seattle, Wash.	Mar.	16
Berntsen, Julius	689	Norway	36	Fort Bragg, Cal.	July	27
Beck, Eugene	724	Denmark	49	San Francisco, Cal.	Oct.	12
Constantine, John	624	Greece	60	San Francisco, Cal.	Apr.	3
Christiansen, A. S	269	Finland	62	Nushagak, Alaska	July	16
Carlson, Victor	893	Norway	28	San Francisco, Cal.	Nov.	21
Dimari, Gaitano	247	Italy	33	San Francisco, Cal.	Dec.	13
Engstrom, Ernest	15	Norway	34	San Francisco, Cal.	Apr.	6
Finstad, Torger	323	Norway	28	Duluth, Minn.	Jan.	5
Fabricious, Harry	159	Denmark	52	Antioch, Cal.	Oct.	29
Fricke, William	379	Germany	—	San Francisco, Cal.	Apr.	15
Gummerus, W. A	465	Finland	34	Oakland, Cal.	Nov.	2
Gustafson, Martin	17	Sweden	61	San Francisco, Cal.	Nov.	17
Hansen, Carl	395	Denmark	35	Seattle, Wash.	Jan.	26
Hendricksen, Ben	623	Sweden	36	Koggiung, Alaska	July	2
Hillman, John	496	Finland	33	Seattle, Wash.	Aug.	31
Ham, Harry	115	U. S. A.	38	Fort Stanton, N. M.	Aug.	7
Hansen, Peter	41	Norway	66	San Francisco, Cal.	Sept.	4
Hansen, Mike	665	Norway	27	Tacoma, Wash.	Sept.	8
Helgersen, Henry	822	U. S. A.	32	Orca, Alaska	Sept.	
Hendricksen, J. A	49	Finland	40	San Francisco, Cal.	Dec.	7
Hansen, Fred	777	Norway	40	San Francisco, Cal.	Dec.	16
Jacobsen, Rasmus	529	Norway	33	Oakland, Cal.	Jan.	29
Johnson, Rasmus	78	Norway	62	San Francisco, Cal.	Feb.	9
Johanson, Sven	905	Sweden	54	Drowned from S. S. "Costa Rica"		
Johnson, Olaf	571	Norway	56	Anchorage, Alaska	June	24
Jonson, G. W	764	Finland	33	Oakland, Cal.	Sept.	27
Johnson, Alf	93	Sweden	39	Seattle, Wash.	Oct.	29
Knutson, Frank	25	Sweden	39	San Francisco, Cal.	Dec.	8
Lehtonen, Arthur T	693	Finland	34	At sea, Tacoma	Apr.	15
Landaas, Carl H	455	Norway	35	Oakland, Cal.	June	4
Lawrence, Oscar	65	Norway	51	Nushagak, Alaska	June	11
Larsen, Engwall	334	Norway	32	Soap Lake, Wash.	Nov.	1
Larson, Charles	4	Sweden	42	San Francisco, Cal.	Dec.	26
Larsen, Peter	304	Denmark	32	Oakland, Cal.	Dec.	23
Matson, Armas	871	Finland	25	Fort Stanton, N. M.	Oct.	4

Thorrell, Carl	182	Sweden	35	San Francisco, Cal.	Feb.	5

A story is told of a collection of stamps which was sold recently in Paris for 80,000 francs. The owner of the collection is the son of a French banker in Petrograd who, when conditions began to be thoroughly unpleasant in Russia under the Bolshevist regime, asked leave to return to France. This was granted on condition that he should take only 1000 francs with him. The sum was somewhat inadequate, but the Frenchman was a man of resource. He bethought himself of his stamp collection, made many years before, and, during his last few days in Russia, he exchanged as many of his personal valuables as possible for stamps. He then left the country with the regulation 1000 francs in his pocket, and in his holdall a stamp album.

"One of the things that strike me with regard to all co-operative associations is that the characteristic feature of an active life is co-operation."—President Woodrow Wilson.

Dr. Samuel Schwab claims that the oldest good story is the one about the boy who left the farm and got a job in the city. He wrote a letter to his brother who had elected to stick by the farm, telling of the joys of city life, in which he said: "Thursday we auto'd out to the country club where we golfed until dark. Then we trolleyed back to town and danced until dawn. Then we motored to the beach and Fridaved there." The brother on the farm wrote back: "Yesterday we buggied to town and baseballed all afternoon. Then we went to Ned's and pokered till morning. Today we muled out to the cornfield and gee-hawed till sundown. Then we suppered and then we piped for a while. After that we staircased up to our room and bedsteaded until the clock fived."

The term "profiteer" is becoming almost as odious as the term "buccaneer" once was. The methods of the former are plainly as "raw" and unscrupulous as were those of the latter.

Labor News

Secretary of Labor Wilson has warned that within 30 days there would be a dangerous overflow in the labor market if necessary employment was not found for thousands of demobilized soldiers.

Senator Otis has introduced a bill in Sacramento providing for the retirement on half pay of State employees who have been in the State service twenty-five years continuously or after twenty-one years continuous service if more than 70 years old.

Twelve States—California, Colorado, Idaho, Illinois, Indiana, Iowa, Missouri, Montana, Nebraska, North Dakota, Oregon and Utah—reported a surplus of common labor to the Department of Labor. In the South there is a general shortage of labor in all trades, while the belt from Connecticut to Minnesota show surpluses in special branches.

Probably half of the 2,000 women in the State of Montana who have taken the places of men in industrial positions during the war emergency will continue to hold their jobs after the return of soldiers and war workers, according to advices received by the State Industrial Accident Board, which has supervision of industrial conditions in Montana.

Senate opponents of Child Labor, whose efforts were temporarily frustrated by the act of the Supreme Court in declaring the Federal Anti-Child Labor Law of 1916 unconstitutional, have secured the approval of the Senate for an amendment to the Revenue Bill which places an extra tax of 10 per cent. on profits made from child labor. The vote stood 50 to 12.

There is a surplus of labor in the mines on the Comstock Lode, says a statement sent out by the Miners' Union. It says there is room for no more miners. Other camps have been notified. In the past few weeks hundred of miners have flocked to Virginia City under the impression that work is abundant there. All the companies are working full-handed.

John A. O'Connell, secretary of the San Francisco Labor Council, has received his commission from the League to Enforce Peace as a speaker. He has also been requested to nominate twenty additional speakers for the California district. The league is waging a forceful campaign in favor of a League of Nations to Enforce Peace with the hope that the idea will be included in the peace conclusions.

An agreement between the Bethlehem Shipbuilding Company and the thirteen international unions comprising the Metal Trades department of the American Federation of Labor, whereby the unions are recognized as representing the employees, was announced by the Metal Trades Department. Committees of five representing each side will consider jointly all matters arising out of the agreement, an arrangement which the department said was a distinct departure from any existing procedure, greatly simplifying relations between employer and employee. It was said to be the first step on a large scale to link up the shop committees with the international unions. Plants at Quincy, Mass., San Francisco, Baltimore and elsewhere, employing 75,000 men, are affected by the agreement.

A club within a club!

Existing clubs represent organizations already formed.

Why not propose, at the next meeting, that your club become a War Savings Society for the rest of the war?

Each member agreeing to buy at least one War Savings Stamp per month.

Besides the saving—

It becomes the popular thing to do with less; to make what you have last longer.

Incidentally, it gives the Government a better market wherein to purchase things for soldiers.

INFORMATION WANTED.

Members of the crew of the SS. 'Brazos," which salvaged the SS. 'Iroquois," about March, 1918, should file, as soon as possible, with me, their claim for their share of the salvage money, or communicate with me at once, as I have noticed the case for trial, and confidently anticipate a verdict in the favor of seamen, for a considerable amount.

ISIDORE A. RABINOW,
Attorney for Seamen,
277 Broadway, Room 401,
New York City.
1-8-19

Members of the crew of the steam schooner "Florence Olsen" who signed articles at New York on September 15, 1918, for a voyage to Central America and return, and who were on board said schooner at the time she salved the steam schooner "Claremont" near the Tucker Islands, off the coast of Nicaragua, on October 31, 1918, and towed her into Christobal, will kindly communicate with Silas B. Axtell, 1 Broadway, New York City. 12-25-18

For the benefit of the widow of John Karus, lost at sea, October 17, 1918, at 2:15 a. m., according to the report in the official log of the barkentine "Aurora," will all members of the crew of that vessel who know anything about the ship, the condition of her rigging, before and after the accident, or anything that will tend to explain his disappearance, communicate with the undersigned attorney for the widow?—Silas Blake Axtell, No. 1 Broadway, New York City. 1-1-19

Members who were present at the time when W. Bodie met with an accident on board the S. S. "Eastern Sea," last July, are requested to communicate with the above named comrade, P. O. Box 65, Seattle, Wash. 11-6-18

Members of the crew of the S. S. "Fred W. Whellen" who were on board November 11, 1918, when she picked up the bark "Galica" should file their claims with this office and be joined in libel which is being filed by the undersigned on behalf of the members of the crew. Silas B. Axtell, 1 Broadway, New York City. 12-25-18

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

INFORMATION WANTED.

Members of the crew of the steamer "Brazos" who were on board when she picked up the S. S. "Iroquois" can obtain money due them for such salvage services by communicating with Silas B. Axtell, attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 7-31-18

Members of the crew of the S. S. "Argonaut," who assisted in the salvage services to the S. S. "Jason," at the time she was in distress off the coast of Florida, on or about January 1st, 1918, will kindly call or communicate with the undersigned who is representing most of the officers and crew of the S. S. "Argonaut." Silas B. Axtell, One Broadway, New York City. 7-24-18

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

Anyone knowing the whereabouts of Jan Zwart, will please communicate with Consul General of the Netherlands, Mills Bldg., Montgomery and Bush streets. 10-23-18

Anyone knowing the whereabouts of Daniel Shean, last heard from at Cleveland, will kindly communicate with his brother, Richard Shean, 7014 Cedar Ave., Cleveland, Ohio. 11-6-18

Home News

Over thirty-five per cent. of all the electric lighting systems in the United States are publicly owned. There are now 1851 municipal plants.

Attorney-General Thomas W. Gregory has tendered his resignation, to take effect March 4. President Wilson has accepted the resignation and will announce Mr. Gregory's successor soon after his return from abroad.

The annual convention of the Associated Advertising Clubs of the World will be held in New Orleans October 26 to November 1, these dates having been approved by W. C. d'Arcy of St. Louis, president of the association.

A war on yellow fever, which is hoped will result in its complete elimination, is being launched by the Rockefeller Foundation, under the direction of a special commission headed by Dr. William C. Gorgas, according to George E. Vincent, president of the organization.

The war has been the undoing of German music and as a result America is released from the sway of Prussianism in music, Professor T. Carl Whitmer, municipal director of singing at Pittsburgh, Pa., declared at the Music Teachers' national convention. The war has exploded the myth that Teutonic music was peerless in that although the music has been prohibited in allied countries, as much inspiration has been received from non-Teutonic compositions, the professor said.

More than $10,000,000,000 worth of minerals were mined in the United States in 1917 and 1918. This was shown by preliminary estimates for the year, combined with final figures for 1917, made public recently by the Geological Survey. The total for last year was estimated at $5,160,000,000, against $5,011,000,000 the year before, and $3,513,972,000 in 1916. The 1918 output of metallic products including pig iron, copper, ferro-alloys, lead, zinc, gold, silver and aluminum was valued at nearly $2,000,000,000.

The cost of living in New York State has increased 62 per cent. since 1914, according to figures made public by the Consumers' League of New York. The figures, taken from records of actual living expense of 1760 women, showed an average weekly budget of $14.62, including room and board, $6.67; clothes, $4.60; carfare, medical care and incidentals, $3.35. The average weekly budget for a working woman in 1914 was $9. Women's clothing has increased 112 per cent.; food, 65 per cent.; fuel and light, 25 per cent., and incidentals, 62 per cent.

The following illuminating facts are worthy of careful thought and analyzation. The stupendous growth since the beginning of the war is marvelous. The quotation is from the Sun, and reads: "Our national wealth has grown from probably less than a billion at the beginning of the last century to seven billions in that century's middle year and to nearly 190 billions at the beginning of this war, and probably, according to the estimate of impartial foreign authority, to 250 billions at the present time. Never in the history of civilized progress has there been a comparable example of prosperous growth self-produced and inflowing."

Domestic and Naval

The House bill for distinguished service naval insignia, similar to that authorized for the army, was passed by the Senate.

The United States army transport "Tuckahoe," which sailed from New York for St. Nazaire, was reported by wireless as leaking badly and putting into Halifax.

New York and New Jersey are close to an agreement in dealing with the great problem of developing the port facilities of New York. Governors Whitman and Edge are ready to submit to the Legislatures of the two States the interstate agreement now completed.

The last annual report of the United Fruit Company, Boston, shows that of the fleet of twenty-three ships owned by the company under American registry seven are being operated in the fruit trade and sixteen are in the service of the Government. Of the fourteen British ships owned by the British subsidiary, Elders & Fyffes, Limited, two remain in the fruit trade with the rest in the Admiralty service. During the year seven ships, six British and one American, were lost. The company's fleet is carried on the books at an approximate valuation of $71 a ton.

Dating from January 1, masters of vessels owned or requisitioned by the United States Shipping Board, plying between Atlantic and Gulf ports, will receive from $300 to $375 a month, depending on the size of the ship. Chief engineers will receive from $212.50 to $287.50, first officers and first assistant engineers from $181.25 to $206.25, second officers and second assistant engineers from $162.50 to $187.50, and third officers and third assistant engineers from $143.75 to $168.75 monthly. Some members of the Board wanted the pay to apply to all vessels in the American Merchant Marine, whether controlled by the Shipping Board or not, but this matter was compromised by an agreement to urge private owners to meet the new scale.

Two of the French auxiliary schooners en route from the Pacific to Europe have met with mishap during the voyage. The "Thann," previously reported ashore at Colorado reef, had been floated, apparently in good condition, excepting for the damage received when the vessel struck. The "Thann" is now at Havana, where a survey is being made. The "Fraternity," en route from Seattle to Nantes, has arrived at Panama with the boilers and engines damaged. Incidentally, the advices recall the story told by one of the French commanders when his craft put into San Francisco with dead engines. He had come in under sail about the time his agents expected to hear of his arrival at Panama. The second day out of Seattle the starboard engine broke down. It was fixed in two days. Another day passed and the port engine refused to perform, and two more days were lost; and then, one day after repairs had been made, both engines went on "strike." The engineers tinkered for two days, but nothing could be done. The skipper finished the narrative as follows: "I then spread my sails, lit a cigarette and started for San Francisco by the power of the wind at a two-knot clip, and am here. I like the ship to be all sail or all engine. What you call the auxiliary craft I do not like."

INFORMATION WANTED.

In Re S.S. "Argonaut" vs. S.S. 'Jason": Members of the crew who have retained me are advised that the underwriters have given me positive assurance that they will be treated fairly in adjusting this salvage claim. That the delay is caused by their inability to ascertain who are the owners of the cargo and its value at the time delivered abroad and when the salvage was performed. There is no action that I can take that would hurry the matter. Said they are acting in good faith.

SILAS B. AXTELL,
New York City.
1-8-19

Traveling Salesman (in Hickville Hotel)—I don't suppose there's anything in the cabaret line in this burg?

Landlord—Sure there is. Our foresighted liveryman had one or two laid aside for a motorless Sunday.—Buffalo Express.

Percy—Ai'm awfully glad the waw's ovah in Fwance.

Doris—What are you talking about? The war isn't even beginning to end.

Percy—Ai didn't say it was. Ai merely said Ai was glad it was ovah n Fwance.—Tit-Bits.

"I understand he's working for the government."

"Yes."

"What's he doing?"

"I don't know exactly, but he's got an office job in Washington that requires him to wear spurs."—Detroit Free Press.

"Bliggins says he's going to break into the army for fear of being a non-essential."

"But," protested Miss Cayenne, "won't he be just as non-essential in the army as he is anywhere else?"—Washington Star.

First Private (over there at a rest station)—There's a bishop coming to preach to us at 9 in the morning and a vaudeville star to dance for us at 10.

Second Lieutenant—Wake me up at 10.—Life.

"With all your debts you have the assurance to ask for the hand of my daughter? What are you thinking of?"

"My debts."—Boston Transcript.

The Public
A Journal of Democracy
Poverty is A Crime!
It isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was
"The Crime of Poverty"
It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.
Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.
Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."
THE PUBLIC

News from Abroad

Japan and America have reached an understanding regarding control of the Trans-Siberian Railway. The allies have given their consent to the Japanese-American understanding.

General Ludendorff, former quartermaster general of the German army, has arrived at Leipzig from Sweden and will write a book vindicating his administration of the war.

The Canadian Government has created a fund of $25,000,000 to be used in the form of loans to the several provincial governments of Canada in carrying out the programs for better housing.

No matter which party obtains a majority in the national assembly of Germany as a result of elections the workmen's and soldiers' council will continue in power, Hugo Haase, independent Socialist, declared in an interview.

Sinn Fein determination to sit in no Saxon parliament will enrich the national treasury by more than $100,000 in forfeited pay checks. To this will be added another $60,000 in election fees deposited and lost to the depositors if they do not take their seats.

Japanese have raised objection to American engineers building the wharf at Lungkow, a contract which was let to an American firm for $130,000. The Japanese claim that the understanding of 1915 provides Japanese shall be given preference in all port work.

Serious disturbances have taken place at Mount Joy Prison, where a number of Sinn Feiners have been imprisoned as ordinary prisoners, while claiming treatment as political offenders. The prisoners are reported to have broken the windows and damaged the cells.

France and Belgium are in the immediate need of 60,000 tractors. British manufacturers can only turn out 1000 a year, and France only from 2,000 to 3,000. All large orders are therefore being sent to the United States and Canada. They will have to supply Europe with 50,000 tractors every year for some years to come.

Commenting on reports of fears in Great Britain of the spread of Bolshevism in Germany, United States State Department officials said the great danger lay in the shutting off of industry. Closing of German factories either by lack of raw materials or markets for the finished products, they said, would force thousands of men into idleness and inevitably lead to Bolshevism, and with industry at a standstill the Allies might as well give up all hope of collecting any indemnity.

A detailed account of the general strike in Switzerland, in which 900,000 workers participated, and in the course of which postal, telegraph and transportation service were entirely interrupted, has been received. It appears that the strikers demanded new eletcions to the Parliament on the basis of proportional representation, woman suffrage, popular reorganization of the Army, guarantee of food supply in co-operation with agricultural producers, a 46-hour week, general obligatory labor, state monopoly of importation and exportation, old-age and invalidity insurance, and payment of the public debt by the propertied classes. After three days, however, the strike committee was persuaded to call off the strike.

With the Wits

"I was a fool when I married you."

"Everybody remarked how well matched we were."—Boston Transcript.

"I love the ground you walk on," he said. And a little later inquired: "Does your father own this property?"—Kansas City Journal.

Sweetie Girl—My father says there is a movement on foot——

Alarmed Young Man—Oh, then, I had better go.—Baltimore American.

"Food is getting more expensive every day."

"Yes," answered the man with the cabaret tastes; "and even more expensive at night."—Washington Star.

Customer—Will you give me a written guarantee that it's a genuine Van Dyke?

Dealer—I can't do that, madam, but I'll give you my word of honor.—Life.

"So the doctor told you to go to a warmer climate. What was the nature of the trouble you consulted him about?"

"I went there to collect a bill."—Boston Transcript.

"That man says he wants an investigation."

"I don't blame him," replied Senator Sorghum. "Sometimes the best way to cause people to forget all about you is to be investigated."—Washington Star.

"How is it you couldn't sell that dame a dictionary? Did you tell her the dictionary had forty thousand words?"

"Yes, but she had more words than that, and she used 'em all, telling me she didn't want it."—Louisville Courier-Journal.

Mr. Colfax (viewing Niagara cataract)—What a tremendous volume of water! Can you tell me the number of tons which go over the brink each second?

The Last Hackman—Me eyes ain't what they used to be, sir, but you can count 'em for yourself.—Buffalo Express.

Union Made

Taylor's Nautical Academy

Established 1858

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

257 HANSFORD BLDG., 268 MARKET STREET

Under Capt. Christensen's personal and undivided supervision, pupils of this favorably known school are taught all up-to-date requirements for passing a successful examination before the U. S. Inspector.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 21. SAN FRANCISCO, WEDNESDAY, JANUARY 29, 1919. Whole No. 2523.

THE I. S. U. OF A. CONVENTION

A Summary of the President's and Secretary's Reports

The twenty-second annual convention of the International Seamen's Union of America was called to order in Galveston, Tex., on Monday, Jan. 20. In accordance with the usual custom The Journal herewith submits a résumé of the President's and Secretary's reports.

The splendid progress made by the organized seamen and fishermen of the United States and Canada is perhaps best illustrated by the fact that the delegates in attendance at the Galveston convention represented 50,000 members in good standing on the books of the respective district unions.

A summary of the convention's proceedings will be published in a subsequent issue of The Journal.

INTERNATIONAL SEAMEN'S UNION OF AMERICA.

Legislative Report of President Furuseth.

To the Twenty-second Convention of the International Seamen's Union of America.

Comrades:—A full and detailed report upon the International Union's legislative activities since our last convention would make a very bulky volume.

An effort has been made, therefore, to compile for this convention a résumé of the more important legal problems only.

Up to the day the armistice was signed there was a seemingly endless controversy regarding the conscription of Seamen for the Army. Numerous decisions and opinions were secured upon this subject, but since the enforcement and interpretation of the Selective Service law was largely in the hands of local boards, often without any conception of the Seamen's peculiar status, there was no end of trouble over individual cases of bona-fide seamen who had been drafted because their absence from home had prevented them from complying with the rules and regulations of their respective local boards. However, now that the war is over it is scarcely advisable or desirable to refer at any length to any of the more important rulings issued upon this question, from time to time, by the Provost Marshal-General. In all probability the selective draft will not be used again during the life of the present generation. Hence, it would seem the best policy to close that subject without further comment.

During the early part of last year a determined effort was made by certain interests that had always opposed the Seamen's Act to place practically the entire merchant marine under Navy control. This, of course, would have meant an end to all our work at Washington and a virtual closing down of the Union's activities during the war. It was a long and often discouraging task to convince those in authority at Washington that it was not to the best interest of the Nation to inaugurate an all-Navy manning policy. In a carefully prepared brief, entitled "Merchant Seamen, vs. Naval Reserve Men," the following main points were driven home:

"1st. That those men are landsmen with a bare smattering of marling spike seamanship, taught on shore, and that it would be unsafe to entrust the vessels to be manned by such men.

"2nd. That it would be a waste of manpower; the ratio of naval men to merchant seamen is usually three to one—and then gave some instances of this kind of manning.

"3d. That it was a waste of tonnage; the extra men must be housed somewhere and part of the cargo space must necessarily be taken for that purpose.

"4th. That it would be a waste of skill and loyalty, the men now sailing finding themselves displaced by men whom they knew to be less efficient would, of course, assume that such action could only arise from a doubt of their loyalty and their good faith in sailing and taking the risks of the submarine; such feeling would surely turn the milk of loyalty sour; they would find other and very likely more lucrative employment and the nation would lose their skill and their loyalty."

It is hardly necessary to report that we were successful in preventing the all-Navy manning scheme, although throughout the year there were renewed efforts, occasionally, to reopen this question.

The Seamen's Compensation Bill.

The Buffalo convention instructed the Legislative Committee to have both compensation bills submitted to said convention together with any other bill or bills they may draft, or that may be submitted to them for analysis, presented to all other maritime organizations that care to interest themselves for the purpose of co-operation.

Accordingly, I visited both the annual conventions of the licensed officers, laid the matter fully before each, and they appointed committees to look into the question and to confer. These committees met; I was with them. It was agreed that the principle should be adopted by the separate conventions as a remedy in addition to all now existing remedies; that the two bills should be sent to Attorney Hutton, (his draft being considered the best), for such correction and improvement as might after closer study be deemed needed; that copies should then be sent to each organization for final approval and then be introduced as the joint measure of all actual seamen. None else to be included because of the constitutional difficulties.

Later, Senator Hiram W. Johnson of California, at our request introduced the bill agreed upon by all the organized marine workers. It is known as S. 4342 and has been printed in full in The Journal.

Owing to the extraordinary conditions prevailing in Washington during the war we have not made the desired progress with this much needed legislation. However, nothing should hinder us now to get the bill out of committee, particularly since the Supreme Court has decided that Section 20 of the Seamen's Act means nothing. The Chelentis Case—"Chelentis, vs. Luckenback St. Ship Co."—was decided against us. Peter Chelentis lost his leg because he obeyed an order given by an engineer and the Court holds that the fellow servant principle has nothing to do with a maritime tort or any damage that a seaman may suffer. In other words the vessel is not responsible for any foolish order made by an officer.

(It should be said, in this connection, that the bill introduced by Senator Johnson was referred by the Senate Committee to the Shipping Board for an opinion. At the time of writing this report no opinion had been rendered.)

The Seamen's Act in the Courts.

When, shortly after the signing of the armistice it became evident that the question of involuntary servitude and perhaps even the question of "regulating" Merchant Seamen's wages would come before the Peace Conference, I submitted the whole problem to members of the Executive Council. By their vote I was directed to proceed to France at once and endeavor to bring about an understanding with the Seamen's Unions in Allied and Neutral countries, with a view of meeting any issue affecting our craft that might come before the Peace Conference.

I had in mind also that, according to previous action by the Inter-Allied Labor Conference, an International Labor Congress is to be held at the time and place where the Peace Conference will meet and that it was imperative to have someone with a full knowledge of our problems at said Congress.

At the time of penning these lines, just before leaving New York, several of our most important legal cases are pending in the Supreme Court of the United States. In all likelihood a decision will be rendered upon these cases before the Galvestion Convention is called to order. I have therefore asked the attorneys who have taken care of the bulk of our legal work to prepare up-to-date summaries of the more important cases affecting seamen with the intention of submitting their compilation as a part of my report to the convention.

(The reports submitted by the attorneys follow.)

Offices of
SILAS BLAKE AXTELL.
New York, December 14, 1918.

International Seamen's Union of America, National Hotel, Washington, D. C.

Gentlemen:—I beg to submit the following report as to the present status of various cases which I have handled, in which the local Sailors'

or Firemen's Union or the International Seamen's Union of America was interested.

1. Dillon vs. Strathearn, involving constitutionality of Section 4530 of the Seamen's Act; decision pending by Supreme Court of the United States; argued November 5th, 1918.

2. Sandberg vs. Talus, involving Section 10 of the Seamen's Act—advances; same status as Dillon vs. Strathearn.

3. Neilson vs. Rhine, involving Section 10 of the Seamen's Act—advances on American vessel made in foreign ports—same status as Dillon-Strathearn.

4. Hardy vs. Windrush, same facts and status as Neilson-Rhine.

5. Pinero vs. Rio Grande, this is a case of wrongful discharge; see adverse decision from Judge Manton, U. S. District Court. Appeal taken to U. S. Circuit Court of Appeals; still pending.

6. Hansen vs. Silver Shell; case of advances in foreign ports; bad food, overtime; tried before Judge Garvin; decision against the seamen. Have been advised by Mr. Brown, agent, New York, to take an appeal. Minutes of trial have been ordered; case will go on.

7. Vanderplug vs. Hugamont; case of bad food, British Bark. Pending in District Court, Eastern District of New York.

8. Von Beekum vs. Veerhaven; received adverse decision to seamen under Section 4530 in U. S. District Court, Eastern District of New York. The court held that the seamen had not made a proper demand; had instructions to appeal the case; have appealed; case pending decision of Supreme Court in Dillon vs. Strathearn, etc.

9. Hansen vs. Earl of Elgin; received adverse decision in the District Court of facts similar to those in Talus. Advance on foreign ship in foreign port. Will be governed by the Talus case. Appeal pending in U. S. Circuit Court of Appeals, Second Circuit.

10. Anderson vs. Oswen; this case involves interpretation or meaning of Section 4530; what is half wages? Tried before Judge Garvin in the Eastern District of New York. Appeal to Circuit Court of Appeals pending. Will hold in abeyance until Supreme Court decides the three cases argued on November 5th, 1918.

11. Fliers vs. Sitabondo; Dutch vessel; action for half wages under Section 4530; on calendar U. S. District Court, Eastern District of New York. Will not try until Supreme Court decision has been handed down.

12. Emerson vs. Hugamont; now in Eastern District of New York; pending trial; British ship; Section 4530; demand for half wages involved. Will hold up, pending decision of the U. S. Supreme Court.

13. Lucas vs. Westmeath; we won this case in the U. S. District Court, Eastern District of New York; demand for half wages; appeal to U. S. Circuit Court of Appeals taken by owners of Westmeath, a British ship. Appeal held up pending Supreme Court decision.

14. Jacobsen vs. Delagoa; unintelligible decision by the United States District Court, Eastern District of New York; involving interpretation of Section 4530, similar to Anderson vs. Oswen. Appeal taken by seamen in order to protect them; held up pending decision of Supreme Court at Washington. Case now on calendar U. S. Circuit Court of Appeals.

15. Abdu vs. Nigretia; decision just handed down by U. S. Circuit Court of Appeals, affirming the decision of the District Court, but on different grounds. This was a decision by Judge Manton to the effect that seamen were not entitled to their wages because they had not made the proper demand contemplated by the statute under Section 4530. Circuit Court of Appeals affirmed the dismissal of the libel on the ground that the seamen were deserters before they made a demand for half wags. I think I shall recommend application to the Supreme Court for writ of certiorari. Length of time to make application is 30 days. Special report following.

20. Patterson vs. Lepanto; action for half wages involving Section 4530. U. S. District Court, Eastern District, followed Circuit Court of Appeals, Third Circuit in Neilman-London case. No appeal taken as it did not appear to be a good case for review.

21. Falk vs. Harold; Swedish vessel; pending in the U. S. District Court, Southern District of New York; involves Section 4530; demand for hali wages. Will be held up pending decision of the U. S. Supreme Court.

22. Jansen vs. Italia; a favorable decision received in the U. S. District Court, Eastern District of New York, by seamen who were represented by the Legal Aid Society, Seamen's Branch. We filed a petition as amicus curiae in the appeal, taken to the U. S. Circuit Court of appeals. Case involves section 4530, demand for half wages made by the crew. The court disregarded advances made to seamen in English port; vessel being Belgian. Appeal was taken by the owners of the ship to the U. S. Circuit Court of Appeals, second circuit. We succeeded in having the case held off for argument pending the Supreme Court Decision in Strathearn and others.

23. Johnson vs. Guffy; case referred by Mr. Brown, agent Seamen's Union. Action to recover wages of seamen discharged abroad at end of six months period for which they were hired, by reason of the taking over of the vessel by the Emergency Fleet Corp. The owners, Gulf Refining Co., have been talking settlement, and the case probably will not be tried.

24. Johnson vs. Talus; this is an action pending in the U. S. District Court, Southern District of New York, involving Section 4530 and Section 10 of the Seamen's Act, as to advances made in foreign ports. Same as Talus case now pending at Washington before the Supreme Court. It is also the same ship.

Yours very truly,
(Signed) S. B. AXTELL.

HOWARD & PEGUES.
Lawyers.

Mobile, Ala., Dec. 17, 1918.

International Seamen's Union of America, Washington, D. C.

My Dear Sirs:—At the request of Mr. Andrew Furuseth, who is now in Europe, I beg to report to you, to be incorporated in the Annual Report, concerning certain legal matters arising at this port, in which the Union is interested and which were handled by me at the request of and on behalf of the Union:

Erik Sandberg et al. vs. British ship "Talus."—The seamen in this case were foreigners, who had shipped aboard the "Talus" at Liverpool, where they were paid wages in advance. They sailed to Barbadoes, thence to Mobile, where they demanded half wages under Section 4, of the Seamen's Act. The master insisted that he had a right to credit the advance paid to them in England, which, if done, would have defeated the demand of the men. The seamen insisted that Section 11 of the Act, which forbids advance wages, was applicable to foreign vessels when the payment was made abroad. The District Court so held, but on appeal the cause of the seamen was defeated in the United States Circuit Court of Appeals. Appreciating the fact that the rule laid down by the Circuit Court of Appeals would affect thousands of men, I called the matter to the attention of Mr. Andrew Furuseth, who authorized me to prepare a writ of certiorari to the Supreme Court of the United States, which was done, with the result that the petition was granted and the case ordered up. Mr. W. J. Waguespack of New Orleans was associated with me in this matter. The case was consolidated with the "Strathearn" and the "Rhine" and the "Windrush," and under the title of the "Seamen's Act Cases" were argued in the Supreme Court of the United States, Nov. 4th, 1918, at which time the government of the United States filed a brief and through Mr. Assistant Attorney General Brown, made an oral arguemnt in behalf of the seamen, and the British Government filed a brief in opposition through Mr. Frederick R. Coudert of New York. Mr. Axtell, of New York, Mr. Waguespack of New Orleans and myself argued the case for the seamen. The case was submitted to be one of vital importance not only to the seamen, on account of the precedent to be laid down by it, in establishing the construction of two important sections of the Act, viz., 4 and 11, but also because it was contended that the theory of the Act was to equalize wages and to give the American Merchant Marine a chance to compete. Mr. Pillans of Mobile and Mr. Hupper of New York argued the case for the ships involved. In my opinion, it is also quite likely that certain British protective associations were interested in the matter and may have helped to bear the expenses of this litigation which were naturally somewhat heavy. The court now has the matter under advisement and it is not known, of course, when it will hand down its decision.

S. S. "Nubian."—This was a suit for seamen's wages, but developed upon the trial this interesting contention: The "Nubian" was carrying cargo for the British Admiralty and was sailing under orders of the government. It was shown that her course was directed by the British Navy. The point was made that she was therefore immune from attack by our courts in a suit for seamen's wages. It was, of course, conceded that public vessels of a friendly power, should be immune from private process. I immediately realized that the court was about to pass on a matter of vital interest to all seamen, namely whether for the duration of the war and probably for some time thereafter the vessels which were under the control of the Admiralty could be made amenable to suits under the Seamen's Act, for the protection of the seamen, and I therefore asked the court as a courtesy to the International Seamen's Union of America, to refrain from passing upon the matter until I could submit a brief for the seamen, which request was granted. I got into communication with Mr. Furuseth and obtained from him authority to appeal in case of an adverse decision, and then submitted, after careful study, a brief, submitting that the "Nubian" was not entitled to the immunity or comity rule, but that being owned and operated for account of Frederick Leyland & Co., should be treated as a merchant vessel. I was informed afterwards by the judge of the District Court that he agreed with me in this contention—but the case was decided finally upon another point and the danger of having the court exempt Admiralty vessels was thus passed.

Puddu Giovanni.—This was the case of a young Italian boy, a seaman on an Italian bark, who was thrown into jail here on a dangerous and suspicious charge. The police held him for quite a while and then the federal government charged that he was unlawfully within this country in that he was in danger of becoming a public charge and had also entered the country at a time and place not lawful under the Immigration laws. Mr. Charles Råving, local delegate of the Eastern & Gulf Sailors' Ass'n., called on me to protect this boy. I discovered that he was being very unjustly treated, especially in consideration of his youth and I filed first, a writ of habeas corpus, and afterwards submitted to the Secretary of Labor a brief in his behalf, showing that it had never been known in this country to found a prosecution against a sailor upon such foolish grounds as that he was likely to become a public charge or that he had wrongfully landed, etc., but that the only test ever required of him by the immigration officials was that he was a seaman on a foreign vessel and was about to reship foreign. I succeeded in obtaining the boy's release both from the police and the federal government.

Gordon et al. vs. S. S. "Cubadist."—This is a suit now pending in the United States Circuit Court of Appeals for the Fifth Circuit. It involves the proper construction of Section 3 of the Seamen's Act. The facts in the case are that Gordon and others signed at Boston for a voyage to Port Padre, thence to a port or ports in the Gulf of Mexico, to be discharged at an American port north of Hatteras, not exceeding six months. The ship sailed empty to Port Padre, where she loaded molasses and discharged same at New Orleans, thence she sailed to Cuba where she again loaded cargo and sailed to Mobile, at which port the men claimed that they had made a voyage to a foreign port and thence back to the United States and that under the terms of Section 3 of the Act, they were entitled to their full wages, and that they were not bound by the term of service, viz., six months named in the articles. The court ruled against the seamen and held that the word voyage was not to be construed in its ordinary meaning, that the voyage was not ended until the six months had expired and that the men could not quit the vessel at Mobile and get their wages. As there are many articles of like character in this trade I thought best to get the matter settled and took the matter up with Mr. Furuseth, who informed me that he thought it of sufficient importance to take the appeal. I expect to present this case to the Circuit Court of Appeals within the next few weeks. It will be noted that Section 3 provides that in case of vessels making **foreign voyages** the seamen are entitled to their wages within twenty-four hours after the discharge of cargo, etc.

It is readily apparent from the above that in many cases deserving seamen would be without redress in the courts were it not for the protecting arm of the Union, and also that cases of national interest, vitally affecting the welfare of your organization would have been passed on by the courts without the side of the seamen being heard, except for the vigilance of those watching after these matters before you.

I am, very truly yours,
(Signed) ALEX. T. HOWARD.

The Call to the Sea and Conferences at Washington.

I am pleased to be able to state that "The Call to the Sea," as adopted at Washington in May, 1917, jointly by the United States Government, the Shipowners and the Seamen (and published in my report to last year's convention), has been signed during the year by practically all the most important shipowners of our country.

During the early part of May, a conference of representatives of the different grades of seamen, of the shipowners and the Shipping Board was in session at Washington. The Department of Labor was also represented. The conference was called to deal with the question of how to find men for the vessels as they get ready. Shipowners from both Coasts were present and also some shipowners from the Lakes, but there were no representatives from the Lake Carriers' Association.

As one result of this conference a committee of five was appointed to formulate proper measures on the points agreed upon. The committee subsequently decided that the seaman coming to port will receive a card to identify him; this card to be countersigned by such others as may have to examine him. The point is that he will need but one card and this card will be issued by the Immigration service. All seamen will be examined for sickness and will, if on American vessels, be sent to a hospital; if on foreign vessels he will be sent to a hospital for treatment at the expense of the vessel on which he is serving.

This applies to all seamen coming within the jurisdiction of the United States. If they are stricken with a disease from which they cannot

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Control 665 Concerns.

At a hearing on the meat industry before the House Interstate Commerce Committee Chairman Colver of the Federal Trade Commission said 665 active companies are under the control or operation of one or the other of the "big five" packers, while 125 have no corporate existence. Some control of 85 other companies is exercised, he said. In 35 cases the packers' control is in the minority and in 50 the extent of their control is unknown.

The "big five" are the Swift, Armour, Morris, Wilson and Cudahy companies.

The Federal Trade Commissioner declared that the operation of refrigerator cars by independent meat packers is "theoretically possible, but in reality is a losing venture."

"Railroads furnish such poor service to small packers that they soon find that they cannot continue to operate the cars," he said. "Marked discrimination of service has been shown in many instances. Cars operated by the 'big five' averaged 80 miles a day, while the average of all other refrigerator cars is 54 miles."

Mr. Colver put into the record letters said to have passed between the Swift Refrigerator Packing Company and the Missouri, Kansas & Texas Railroad "showing how the railroad was to dismantle a stock yard at Forth Worth, Texas, which operated in competition with yards owned jointly by Armour and Swift, before the packers would give the road any traffic from that point."

To Keep Work Going.

The Department of Labor has created a new activity, to be known as the division of public works and construction development. Its purpose is to urge the construction of public works and private enterprises.

It is stated that there are but two possibilities of avoiding serious unemployment during the remainder of the winter. One is the wasteful plan of continuing on a large scale the production of war materials. The other is the development of public works and private building enterprises. The Department of Labor intends to encourage the latter theory.

High Death Rate of Babes.

Every trade union argument against low wages and their effect upon society is packed into a chart that is part of the annual report of Miss Julia C. Lathrop, chief of the children's bureau, Department of Labor.

The chart shows that the death rate for babies whose fathers earned less than $450 was 167.8 per 1,000 births, or more than one in every six. When the fathers earned $1,250 or more, the death rate for their babies was 64.3 per 1,000 births, or one in 16.

The indictment against the evils of low wages, that affect not only the family, but society as a whole was made possible by an investigation in eight cities. It is based upon interviews with mothers of nearly 25,000 live-born babies.

The report says that since these figures have been gathered, wages are probably increased, but—

"The figures recently published by the bureau of labor statistics of this department, however, showing general increases in the cost of living, afford no indication that the advantage to infant life can be at this time in proportion to the presumable increase in fathers' cash earnings."

Entitled to Insurance.

Secretary of the Treasury Glass calls attention to the confusion between "insurance" and "compensation" that exists in the minds of numerous dependents of men in the military service.

Many fathers and mothers named as beneficiaries of the Government insurance applied for by their sons have gained the impression that they must prove dependency before they can receive this insurance.

Secretary Glass asks that the widest publicity be given the fact that a beneficiary, if within the permitted class of spouse, child, grandchild, parent, brother or sister, is entitled to receive the insurance in monthly installments without proving any dependency upon the insured.

"Compensation," however, is separate and apart from insurance. Compensation may be payable in addition to insurance, but a mother or father must prove actual dependency in order to receive monthly payments of compensation, although they will receive the insurance in monthly installments if named as the beneficiary, whether they are dependent or not.

"To put the matter in a few words," said Secretary Glass, "no dependency need be shown by the beneficiary in the case of insurance, but a mother or father must prove actual dependency upon their deceased son for the necessaries of life in order to receive the additional payment of compensation."

Many Mothers Die.

Approximately 15,000 mothers in this country die every year in child birth from causes which are largely preventive, declares Miss Julia C. Lathrop, chief of the children's bureau, Department of Labor, in her annual report, just issued.

"The loss involved is immeasurable," declares Miss Lathrop. "It does not stop with the loss of vigor and efficiency to the mother. It extends, in general, to the well-being of her home and her children, and, in particular, to the motherless infant who faces a peculiarly hazardous existence.

"The prevention of maternal deaths involves the problems of making universally available and universally desired adequate care of child birth and before. When this can be accomplished a new step will have been taken in the prevention also of infant deaths among the large number of babies whose mothers escape the dangers involved in the lack of proper care."

World's Workers

For the first time in French history, big Socialist meetings are being held in Brittany.

It is understood that the Seamen's Federation of New Zealand has made a demand for a 25 per cent. increase in wages on coastal and intercolonial vessels, and 50 per cent. on the local trade.

Labor troubles in the oil fields and gold mines of Mexico during the last eighteen months have been traced to German agents, according to H. W. Crowder, general manager of the Mexican Mining Exploration Company.

The idea of working out a means of better understanding between the organizations of returned soldiers and the trade unions took definite shape recently, when it was decided at Vancouver, B. C., to form a Returned Men's Association to act with delegates from the Central Labor bodies.

Unions in Scandinavia are showing a rapid growth since the war, according to information from the northern countries. The additional memberships Swedish in the trade unions for the year just ended are 45,334 and the total membership is 186,146. The number of women trade unionists has increased in the year from 8,238 to 14,402.

The plans for a general strike throughout Uruguay, which have been under preparation for some time, were abandoned on January 1. The government, by the threat of using the army against the workers, was able to terrorize the labor leaders into abandonment of their original plans. It is stated, however, that the labor leaders are continuing their work of organizing the workers of the southern republic.

Sweeping electoral reforms effected in Sweden providing "the most extended universal suffrage for both men and women" are described in a cable dispatch from the Foreign Minister at Stockton to Swedish Minister Ekengren in Washington. The reforms are expected to develop a democratic majority of Videlicet Liberals and Labor party members in both houses. It may also be effective, it is explained, in forestalling any tendency toward Bolshevism.

The recent deliberations of the thirteenth congress of the Union General de Trabajadores, the national labor union of Spain, were of more than usual importance to the Spanish labor movement. The conditions which made the congress of such significance were the state of world politics, the re-awakening of the working class group in Parliament which was conducting a strong campaign, the economic plight and attendant labor unrest which the country was facing, and the general disorganization of the workers themselves.

According to an interview given by Emil Davies, chairman of the Railway Nationalization Society of Great Britain, to a representative of the Central News, railway nationalization is bound to come to Great Britain, no matter what government may be in power. "It is the only possible solution," he said, "of the labor unrest which became dangerous before the war. Furthermore, the public will not stand any further rise in rates and fares merely to enable a number of separate and unequal companies to continue to distribute dividends."

Pacific Coast Marine.

State Harbor Commissioners announce that the siren on the Ferry building, San Francisco, will blow thrice daily—at 8 a. m., 12 m. and 5 p. m.

H. M. Delaney, recently honorable discharged from the marine service, has resumed his former position as manager of the Grays Harbor Stevedore Company.

The plan to utilize pier 23 in San Francisco as a receiving pier for all of the associated fishermen has been abandoned and the structure will be used for regular ship berthing purposes.

The American destroyer "Chef," built at the San Francisco plant of the Bethlehem Shipbuilding Corporation, arrived at Norfolk Navy Yard, from San Pedro in eighteen days' steaming.

A contract for the construction of a bulkhead shed at pier 41, San Francisco, has been approved and the contract let to J. D. Hannah, who was the lowest bidder of eight. The shed will cost $41,400.

A contract to install a steam plant in the oil barge "Mohican" was approved by the Board of Harbor Commissioners at San Francisco. The barge will be ready to handle vegetable oils in about two months.

Lange & Bergstrom of San Francisco were awarded a contract for the construction of a group of nine permanent buildings at the naval aerial coast patrol station at North Island. The contract price was $431,486.

Announcement has been made that the Shipping Board's sea service bureau branches at Bellingham, Tacoma and Astoria will be closed. The activities of the bureaus will be centered at Seattle and Portland.

Owners of the transpacific passenger and freight lines, operating independently of United States Shipping Board control, have decided to ignore the schedule of transpacific freight rates recently anounced by the Shipping Board.

The five-masted British auxiliary powered schooner "Janet Carruthers," Captain Carney, went aground in the breakers four miles north of Westport, at the entrance to Gray's Harbor, January 22, and six of her crew of fifteen are missing.

The port of Astoria dredge "Natoma" is engaged in dredging the Skipanon River, and at the present rate, will soon have the channel completed up to the turning basin. It is planned to construct this basin large enough to accommodate all vessels which will be able to get up the river.

Since acquiring the control of a numerous fleet of sailing ships the Howard Company is doing a large volume of business and has introduced new and efficient facilities to handle freight at the Oakland terminus. This concern has more than doubled its offshore forwarding business during the past year.

The rate paid to ship operators for carrying case oil to the South Pacific has toppled sadly recently and the indications are that in a short time the pre-war rates of something like 90 cents a case will once more be in effect. The rate is now quoted at $1.10. The best rate obtained when the running was good was $1.50 a case.

The "Gray Eagle," a 4000-ton twin-screw (Ward type) steamer, was launched recently from the ways at the Grays Harbor Motorship plant. Mrs. Art Holm, wife of the motorship superintendent, acted as sponsor. The "Gray Eagle" is the fifteenth vessel which the plant has launched for the United States Government, and the sixteenth built in the yard.

Seattle's Port Commission has let a $617,725.93 contract for construction of the substructure of a new huge pier on Smith Cove. The complete pier, when finished, will cost $2,300,000, commission officials said. According to local records the new pier will be the largest on the Pacific Coast. The commission plans to use it in handling new Oriental trade.

K. Doi, manager for the Toyo Kisen Kaisha at San Francisco, has left for New York, where he will establish an office. The American business will all be managed from San Francisco where Doi will have control, but owing to the extension of business it has been found advisable to have an office on the Atlantic Coast where the patrons may get in direct touch.

The steel freighters "Edgemont" and "Western Knight" have been assigned by the United States Shipping Board to the Pacific Steamship Company as operating agents. The two new carriers will be added to that company's off-shore fleet, making nine vessels in that new organizaton The other seven are either at sea or loading cargo at Oriental ports for the return trip.

H. L. Stout, deputy chief of plant protection of the United States Shipping Board, and James L. Johnson, special representative of the Emergency Fleet Corporaton have opened offices in the Flood building, from where they will direct an auditing of the books of Pacific Coast shipbuilding plants. A similar audit is being made at other ship construction centers throughout the country.

E. L. Whitney of Mobile, who has bought several vessels for offshore operation, purchased the barkentine "Benicia" from H. L. Seaborn and the barkentine "Albert" from Olson Brothers. The "Benicia" sailed from Sydney on December 9 and will load at Seattle with cargo for Portuguese East Africa. The "Albert" will continue to ply between San Francisco and ports in the Antipodes.

Destruction by fire threatened the Shipping Board steamer "Wishtah," which departed from San Francisco, November 25, and arrived at Balboa from Antofagasta January 10. The steamer was proceeding to Balboa in ballast and a fire broke out in the engine room. For several hours it was believed that the vessel would be destroyed, but the flames were finally subdued. The "Wishtah" will remain in Balboa for repairs several weeks and will then proceed to the Atlantic.

The historic old schooner "Casco," made famous because Robert Louis Stevenson at one time used the little craft to cruise the South Seas, is now lying at the Tibbitts shipyard at Alameda waiting for a purchaser. The Seattle owner has decided that the craft is too small to operate as a commercial vessel. During the last voyage of the "Casco" the young skipper in command and his bride had the pleasant experience of pumping water out of the craft of history during the entire voyage from Samoa.

The offices of the Marine Engineers' Beneficial Association, designated as No. 35, have been enlarged to take in all of the windows fronting on Steuart street, and as a consequence Secretary Ernest Pegg and his assistants have a lovely view of big business, and the space formerly devoted to social purposes is not as big as it was. The membership has been increased to considerable figures and the crowded space formerly utilized for executive work proved too small for the office staff.

The old tug "Hercules" began a new career when she sailed out through the Golden Gate as a whaler. Guns are mounted on the deck of the vessel, which will be used in shooting at California whales along the Coast. The base of operations will be Monterey bay. The whaler "Hercules" is the older of the two tugs of that name and for thirty years has been operated in towing. Capain A. E. Lindholm, an old-time coasting skipper, is in command of the craft. The whaling company plans to sell whale meat and dispose of the inedible parts of the sea animals to farmers for fertilizer.

The steel for the new Crowley derrick barge has arrived from New Jersey and is waiting to be installed in the giant barge, which will be under construction at the Crowley shipyards as soon as Manager Walter Westman can assemble the material for the hull and the workmen. A total of 240,000 feet of good spruce will be used in the hull construction, and this will include the stoutest timbers ever turned out by the mills of Oregon and Washington. In order to carry the strain of the working derrick, when it handles the maximum of 100 tons, the construction will have to be stouter than that of any of the wooden steamers built for the Government on this Coast.

According to advices received from Washington a number of the Matson and other ships commandeered for transport use on the Atlantic at the beginning of the war soon may be released to their owners for operation on this Coast The owners believe, however, that the release will not be effected for about six months and that it will then require some months to restore the liners to their former condition. According to the agreement with the Government the ships are to be returned in the condition in which they were received. Shipping men say that the changes will be effected quickly because of the care exercised by the Navy when the vessels were taken over. All of the parts taken out of the ships were crated carefully and marked and all of the woodwork is carefully covered and protected. The Navy officials planned to make it possible to return the borrowed fleet in good condition as quickly as possible.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.
Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, JANUARY 29, 1919.

SNIPING THE SEAMEN'S LAW.

Wars may come and wars may go, but the war of the labor-crushers against the workers goes on forever.

Taking advantage of what they evidently regard as a favorable moment, our friends, the shipowners, have taken another shot from ambush at the seamen's charter of freedom, the Seamen's Law. The shot is in the shape of a bill (H. R. 13671) introduced in the House of Representatives on the 7th inst. by Mr. Gould, of New York, and entitled:

A BILL

To amend the Act entitled "An Act to promote the welfare of American seamen in the merchant marine of the United States; to abolish arrest and imprisonment as a penalty for desertion and to secure the abrogation of treaty provisions in relation thereto; and to promote safety at sea," approved March fourth, nineteen hundred and fifteen.

The bill was referred to the Committee on the Merchant Marine and Fisheries, and ordered to be printed.

On the same day (Jan. 7) an exact duplicate of Mr. Gould's bill, known as S. 5285, was introduced in the Senate by Senator Calder, also of New York.

As a modest starter the Gould bill proposes to strike out all of Section 4 of the Seamen's Act. That section, as the readers of the JOURNAL know, provides for the payment to seamen in port of one-half part of any wages then earned. Its repeal would reestablish the old status of seamen under which they were invariably forced to sign articles containing the stipulation, "No money in port except at master's option," thus subjecting them again to the rapacity of the sharks ashore and afloat who habitually prey upon seamen. And, of course, that is just what the backers of the Gould bill want. Needy seamen are nearly always cheap seamen, and cheap seamen mean more profits for the shipowners.

Section 5 of the Seamen's Act is sought to be amended by the Gould bill by requiring that when a majority of the crew call for a survey of their vessel in a foreign port, "at least two of the officers" must be included in said majority. Should that amendment carry it would, in ninety-nine cases out of every hundred, mean no survey of the vessel. The future careers of the officers of a ship are too much dependent upon the goodwill of the master and the owners for them to risk antagonizing the latter by delaying the ship in a foreign port, no matter how unseaworthy she may be.

But it is not until we come to the attempted amending of Section 7 of the Seamen's Act that the real inwardness of Mr. Gould's bill becomes apparent. The amendment, in short, aims (1) to make the penalty for desertion "imprisonment for not more than one month"; (2) to raise to fifteen days' pay the present penalty of two days' pay for neglecting or refusing without reasonable cause to join vessel or proceed to sea, etc.; (3) to make penalty for quitting vessel without leave "imprisonment for not more than one month."

In connection with the last mentioned clause it should be noted that the Seamen's Act makes the penalty for quitting a vessel without leave contingent upon the quitting occurring "after her arrival at the port of her delivery and before she is placed in security." Mr. Gould's amendment omits that qualifying sentence entirely, leaving the penalty to apply at all times, even though the vessel may be anchored in a safe harbor or tied up securely to a dock.

Section 13 of the Seamen's Act is the next and last attacked by the Gould bill. The provisions of this section are to be snugged down, diluted and otherwise emasculated (1) by reducing from 75 per cent. to 35 per cent. the number of the crew who must be able to understand any order given by the officers of the vessel; (2) by reducing to 12 months the 3 years' service on deck at sea required by the present law of a person seeking to qualify for the rating of an able seaman; (3) by eliminating from the section the stipulation that "seamen examined and rated able seamen under this proviso shall not in any case compose more than one-fourth of the number of able seamen required by this section to be shipped or employed upon any vessel"; (4) by eliminating the clause empowering collectors of custom to refuse clearance to vessels failing to comply with the provisions of Section 13; (5) by leaving out the proviso that "any violation of any provision of this section by the owner, master or officer in charge of the vessel shall subject the owner of such vessel to a penalty of not less than $100 and not more than $500."

In short, Mr. Gould's bill is frankly reactionary. If enacted into law it would, at one fell stroke, undo nearly all of the good work done in the past to make American seamen free men.

However, the friends of the seamen in both the Senate and the House have assured the seamen's representatives that no action will be taken on either the Calder or the Gould bill during this session of Congress. What their fate will be in the next Congress is, of course, problematical. But until they are finally disposed of it behooves every friend of the seamen to keep his weather eye lifting at all times, lest the enemies of the seamen slip something over on them which will make their last state worse than their first. Eternal vigilance is the price of liberty.

When Peace comes in through the door Patriotism flies out through the window.

AN ELOQUENT EULOGY.

Two weeks ago the JOURNAL published an obituary announcing the death and burial of Comrade Frank Johnson, one of the oldest members of the Sailors' Union of the Pacific. Mention was also made that he had for many years past regularly attended the weekly sessions of the San Francisco Labor Council as a delegate to that body from the Sailors' Union. How highly the departed comrade was esteemed by his fellow delegates in the Labor Council is eloquently attested by the following touching tribute to his memory:

Sailors' Union of the Pacific—
Dear Sirs and Brothers:

Enclosed please find resolution adopted by this Council in memory of your delegate, Frank Johnson, whose untimely death is sincerely mourned by all delegates of this Council. His influence upon the progress of the labor movement at large was no less than for the advancement of the cause of the trade he represented.

Assuring you of our deep consideration and sympathy, we are,

Fraternally,
SAN FRANCISCO LABOR COUNCIL.
By John A. O'Connell, Secretary.

(The resolution referred to follows):

RESOLUTION IN MEMORIAM.

Whereas, It has pleased Almighty God to call from his labors in the cause of brotherhood of all men, Frank Johnson, one of the founders of the Sailors' Union of the Pacific, and in point of service one of the oldest delegates to the San Francisco Labor Council; and

Whereas, His faith and interest in the organized labor movement of San Francisco was of that simple, rugged and beautiful strength which moves mountains and overcomes by its spiritual insistence every obstacle in its way, through the daily practice of unremitting patience, toil and self-sacrifice; and

Whereas, We, his fellow workers in the same movement, realize his sterling worth and influence, and the great loss suffered by every cause for the betterment of humanity in the death of Brother Frank Johnson, justly termed one of God's noblemen; therefore, be it

Resolved, That the San Francisco Labor Council and its affiliated Unions mourn the death of Frank Johnson, veteran delegate of the Sailors' Union of the Pacific, and express their deep sorrow and sympathy to his fellow workers, his many friends, and the members of his family; further

Resolved, That, in token of our sentiments, the Charter of the San Francisco Labor Council be draped in mourning for the period of three months, and that copies of this resolution be forwarded to the Sailors' Union of the Pacific, and to his bereaved family.

Adopted by rising vote, January 17, 1919.
Attest: JOHN A. O'CONNELL,
Secretary.

MR. HOWARD HEARD FROM.

The Advisory Committee to the Recruiting Service of the United States Shipping Board held its regular monthly meeting at New York on the 7th inst., instead of at Boston, as had previously been the custom of the Committee.

Among those who attended the meeting was Comrade G. H. Brown, New York agent for the Eastern and Gulf Sailors' Association. Comrade Brown utilized the occasion to call the attention of the Committee to the unfair discrimination by the Sea Service Bureau Chiefs against both experienced union seamen and non-union ordinary seamen, as shown by their undue preference for Sea Service recruits in the shipment of crews. The chairman stated that he was not aware of the alleged discrimination, but would investigate and, if the allegation was found to be true, endeavor to have the practice discontinued. That he made an effort to get at the truth of the matter is indicated by the following letter:

Dear Mr. Brown:

At the meeting of the Advisory Committee to the Recruiting Service of the United States Shipping Board, Tuesday, January 7, 1919, you

made reference to the large number of ordinary seamen without employment. I have taken this matter up with Capt. Irving L. Evans, Chief of the Sea Service Bureau of our Recruiting Service, and have requested him to arrange with the agents of the Bureau in the ports where this Service has representatives so that men of sea experience not affiliated with labor organizations and men of sea experience who are members of marine labor unions shall be given the preference in filling positions available through our Bureau over the men who have had no sea experience other than that obtained while in training on ships of our Sea-Training Bureau.

It is not now and never has been the object of the Recruiting Service to drive experienced men of the sea from positions on ships. It has been and now is the intent and policy of this Service to encourage men of sea experience to continue to follow the sea and to train men so that, through men of experience and men trained by this Service, there will be a reasonable reserve, at all times in the present ports of shipping, of officers and crews to man merchant vessels and thus prevent any ships from lying idle.

By this arrangement, you will quite readily see that this Service is putting forth its best efforts to place men of sea experience in positions on ships in preference to men who have just acquired training.

Very truly yours,
(Signed) HENRY HOWARD,
Director of Recruiting Service.

As the above letter is of general application in all ports where the Shipping Board's Recruiting Service maintains sea-training bureaus, it is advisable for seamen everywhere to make a special note of it.

FURUSETH IN FRANCE.

An American newspaperman in France cables home from Paris that "Furuseth has brought his long, lean, angular frame here to haunt the Quai d'Orsay, in the belief that while freedom of the seas is occupying the peace conferees' minds freedom of the seamen may go by the board." Furuseth, he says, "fears that other nations, particularly Great Britain, may attempt to obtain international legislation that would abrogate the American Seamen's Act, but feels confident that the American delegation will oppose any such move."

In support of the confidence he feels on that head, Furuseth is quoted as saying:

We have reason to believe the American peace delegates will steadfastly oppose any effort to turn the seamen back to the old conditions. They appreciate that they never will make America a maritime nation unless wages and life at sea are in keeping with American conceptions of human rights. On the other hand, any nation wishing to attack America's growing maritime power naturally would strike at the Seamen's Act, hoping to nullify our shipbuilding success by making it impossible for us to man our ships. That is the view of American nationalists. Fortunately it accords with the seamen's interests.

To those who know the pressure brought to bear on the British government by British shipowners to have the American Seamen's Act emasculated in some way, Furuseth's fears are readily understood. There is not much doubt, either, that the British delegation to the peace conference will attack the Act. It is most fortunate for seamen, therefore, that they have on hand at the conference so able and seasoned a fighter in their cause as Andrew Furuseth.

Our opponents are somewhat chagrined at the progress trade unionism has made of late, and they are trying to put more weight on the brake handle, but the track has been greased, and they find that their weight on the brake does not stop the train of progress. Let us hope they will get sense soon and stop trying to sweep the waves of the sea back with a broom.

The world must be made safe for seamen.

U. S. MARITIME LAW SUPREME.

States Can Not Enact Laws Making Void Maritime Contracts Appertaining to Commerce and Navigation.

Editor Seamen's Journal:

The Supreme Court of the United States on the 7th instant decided that the States of the Union are entirely unable by legislation to affect any of the sea laws of this country. This decision was given in the case of Erickson against the Union Fish Company, decided by Judge Dooling in favor of Erickson in September, 1915. Denman & Arnold and H. W. Hutton, Esq., represented the Union Fish Company, and I represented Erickson. I give the opinion in full below, as it explains both the facts and the law.

Yours very truly,
F. R. WALL.

January 7, 1919.

Mr. Justice Day delivered the opinion of the Court.

Erickson filed a libel in admiralty in the District Court of the United States for the Northern District of California, alleging that by an oral contract with the petitioner, owner of the vessel "Martha," he engaged to proceed to Pirate Cove, Alaska, and after arrival there to serve for a year as master of the vessel, and perform certain duties in connection therewith for an agreed compensation. The libel averred that he proceeded to Pirate Cove, and performed his duties under the contract until he was wrongfully discharged by the respondent. Libelant sought to recover damages for breach of contract. An answer was filed denying the alleged contract, and averring that libelant was discharged because of his wrongful conduct.

A decree was rendered in favor of libelant in the District Court; upon appeal that decree was affirmed by the Circuit Court of Appeals. 235 Fed., 385.

The question presented and argued here concerns the application of the California statute of frauds, which it is alleged rendered the contract void because not to be performed within one year from the making thereof. The Civil Code of California provides:

"Section 1624. The following contracts are invalid, unless the same, or some note or memorandum thereof, is in writing and subscribed by the party to be charged, or by his agent:

"1. An agreement that by its terms is not to be performed within a year from the making thereof."

The contract of the master was of a maritime character. This does not seem to be controverted by the petitioner. (See The Boston, Fed. Cases, No. 1669, 921; The William H. Hoag, 168 U. S., 443). We have, then, a maritime contract for services to be performed principally upon the sea and the question is can such engagement be nullified by the local laws of a State, where the contract happens to be entered into, so as to prevent its enforcement in an admiralty court of the United States?

The Constitution (Article III, Section 2) extends the judicial power of the United States to all cases of admiralty and maritime jurisdiction. Admiralty jurisdiction under the Federal Constitution "embraces," says Mr. Justice Story in his treatise on the Constitution, "two great classes of cases—one dependent upon locality, and the other upon the nature of the contract. In the latter class are embraced maritime contracts and services, rights, and duties appertaining to commerce and navigation." Story on the Constitution, Fourth Ed., Sec. 1666.

This court has had occasion to consider the nature and extent of admiralty jurisdiction as it was intended to be conferred by the Constitution. In the Lottowanna, 21 Wall, 558, the subject was much considered, and Mr. Justice Bradley, speaking for the court, said:

"One thing, however, is unquestionable: the Constitution must have referred to a system of law co-extensive with, and operating uniformly in, the whole country. It certainly could not have been the intention to place the rules and limits of maritime law under the disposal and regulation of the several States."

This principle was reiterated in Workman vs. New York City, 179 U. S., 552. In that case it was declared that neither local law nor decisions could deprive of redress where a cause of action, maritime in its nature, was prosecuted in a court of admiralty of the United States. (179 U. S., 560.)

In the recent case of Southern Pacific Company vs. Jensen, 244 U. S., 205, the subject was again considered and the cases in this court reviewed, and State legislation was declared invalid "if it . . . works material prejudice to the characteristic features of the general maritime law or interferes with the proper harmony or uniformity of that law in its international and interstate relations." (244 U. S., 216.)

In entering into this contract the parties

(Continued on Page 11.)

OFFICIAL.

DIED.

James Ferrister, No. 968, a native of Massachusetts, age 48. Died on board S. S. "Dumaru," Nov. 25, 1918.

Frantz Wilhelm, No. 114, a native of Austria, age 54. Died in the wreck of the S. S. "St. Gabriel," Nov., 1918.

Andrew Gundersen, No. 785, a native of Norway, age 34. Died at San Francisco, Cal., Jan. 21, 1919.

Samuel L. Wahlberg, No. 1048, a native of Sweden, age 48. Died at Manila, P. I., Dec., 1918.

Office changes which meant big leases have recently been arranged by several of the leading shipping concerns in San Francisco. The latest change reported is that of the Pacific Steamship Company, which is moving its ticket and general offices to the Santa Fe building, on the southwest corner of Market and Second streets. The Toyo Kisen Kaisha are going to move from the Merchants' National Bank to the Oceanic building, and Balfour, Guthrie & Co., are going to proceed at once with work on their new building on the site of the New York Mutual Life building, southeast corner of California and Sansome streets.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Bethlehem Steel has torn up its "scrap of paper"—the award of the National War Labor Board, under which shop committees elected in the shop by the employes of the company were to be recognized by the company in settling all industrial disputes.

The final admission that Schwab's corporation lied to former President Taft and the rest of the War Labor Board when it agreed to abide by the award, was made in public session Wednesday afternoon. Mr. Taft was indignant. Attorney Currier for Bethlehem Steel was smooth and smirking, but stubborn. He said that the war is over, and 11,000 men have been discharged from the plant, and that it would be absurd to expect the company to acknowledge the authority of committees elected before the armistice was signed. More than that, his company considered that the power of the War Labor Board no longer can compel it to deal with its men as the Board sees fit.

This means only one thing—that Bethlehem Steel takes the lead among big anti-union employers in a vast crushing movement, designed to provoke violence and the repression of the rights of wage workers in every industrial center in America where labor is not in political power. Bethlehem Steel wants to "start something" now, and take the chance of defeating the union movement in the steel industry by the use of the State constabulary and Steel Trust police.

Chairmen Taft and Manly of the War Labor Board are to consult with the Bethlehem employes tomorrow, to see what can be done in the face of this treachery by the corporation which has coined so many millions in profits from their labor during the past year. But they have little hope of avoiding a final conflict.

At the very moment that Bethlehem Steel was throwing down this challenge to the laboring masses of this country, the Labor Congress in session at Chicago was displaying a temper that was anything but meek and humble, and Frank Morrison, Secretary of the American Federation of Iabor, was issuing the reconstruction program drawn up by John Frey and his associates under appointment by the Executive Council of the Federation—a program which indicates that the next convention of the American labor movement will take some very long jumps forward in its legislative demands. Next day Morrison predicted bread lines by May 1 in the industrial cities, so rapidly does the release of war workers and soldiers add to the number of the unemployed.

Congress is still asleep. It sees, hears and says nothing of any significance regarding the labor situation. Senator Thomas of Colorado, who has recently taken first place among the enemies of labor legislation in Congress, devotes an afternoon of the time of the Senate to denouncing the Russian Soviet government. Senator Williams of Mississippi delivers a tirade of personal abuse against Senator La Follette, after which the Senate votes, 50 to 21, to kick out of doors the charges made against the Wisconsin progressive by the Minnesota Public Safety Commission. Only Senator Kenyon takes the situation seriously enough to ask the Governors of the States to get together to plan a way to give work to the unemployed by starting public improvements.

But it seems that American labor has turned the corner, so far as politicians are concerned. It is going to go it alone, and for a new and comprehensive program of justice for the common man, in the political, industrial and social world.

Gilbert Hyatt, president of the National Federation of Postal Employes, sat through one day's session of the convention in New York City, held last Saturday and Sunday, where the delegates of virtually every local trade union in and around Greater New York joined in launching the new radical party. Hyatt is conservative. He discounts all new and untried organizations. But he was thrilled by what he saw in the old Tammany stronghold.

"The spirit of the whole thing was fine," he said. "More than 800 delegates were there. They seemed to want to get together and pull together. The delegates from the American Federation of Labor unions voted, after they got together, to broaden the field to include all workers by hand or brain who wished to come with them. The radical Socialists and even some of the revolutionaries came in. Judge Panken made a speech and pledged that the Socialists would enter the Labor Party, since its platform was adapted from the platforms of the British Labor Party. Everybody was willing to concede something to the factions with whom they had been fighting, in order that a solid front might be presented by labor in New York to its enemies. If that convention's spirit can be conveyed to the rank and file, the movement is a complete success."

Hyatt said that the old Tammany men who have been officials of the labor movement in the Central Federated Union in New York are not in the Labor Party. Their locals have "blown off the lid" upon which these men have stood, and now the old conservatives wait to see whether it will be wise for them to come into the new movement after all. Meantime new leaders are coming to the front, and they talk the new and aggressive tactics that go with the new program.

In his judgment the Labor Party movement will be the solution of the problem of getting Congress to give justice to the millions of men now in Government employ, both in the postal service and elsewhere. It is the answer to Burlesonism. Labor Party Congressmen, fighting for a program such as has been adopted by the Labor Party in Chicago, in New York, in Minneapolis, in Bridgeport and elsewhere, would in a few weeks drive both the Republican and Democratic party leaders to surrender, if not to headlong flight.

That's the view taken by the majority of labor officials who come to the national capital, these days. We shall hear more of it between now and the date of the national convention of the Labor Party.

Over in France there is a labor situation that grows more serious every day, as our Government is very keenly aware. Leon Jouhaux, Secretary of the French General Confederation of Labor, states frankly that the masses of French labor are past all holding in leash, if the present reactionary policies of the Clemenceau government with regard to censorship and suppression of labor sentiment are continued. If the old leaders hold back, he says, then "new and redder men" will be thrust up from the rank and file to do the leading. The official resolutions of the national convention of the French labor movement denounce the opposition of their government to the Russian Soviets, and demand that French troops come out of Russia. In view of this state of mind, the resentment of French labor at the conspiracy of secrecy in the Peace Conference, voted by the French, Italian and Japanese delegates, can easily be imagined. And in Italy the government with its imperialistic plans is even more frightened than is the ministry in Paris.

If any man or woman in the labor movement of this country thinks that we are getting too radical, and that it is a time for economic witch-burning, that person should read the remarks made at the Labor Congress in Chicago by Bourke Cockran, which were cabled to President Wilson in Paris in the form of a memorial. And if they have still any lingering doubts, then they should have heard Francis J. Heney's testimony before a Senate committee this week, on the way in which the wage workers of this country are today being robbed on every item of food they buy, to the tune of hundreds of millions of dollars a year, by five families of meat packers in Chicago. This food monopoly alone, coupled with the barbarous treatment given their army of employes by the packers, is enough to revolutionize the whole mind and heart of the labor movement, and to drive it into instant action against the treachery of public officials.

One by one the Government Conciliation and Arbitration Boards are losing the authority they had in war time. The Metal Trades convention for the Pacific Coast District has voted against any further dealings with the Macy Board. President O'Connell of the Metal Trades Department of the American Federation of Labor said to-day that the Macy Board was about to expire anyhow. The War Labor Board lives on, but can be defied by the employers.

* * *

Mrs. Bertha Moller of Minneapolis, who has spoken before many labor conventions in Minnesota, has just served a day in jail here for contempt of court. She applauded when suffragist prisoners, arrested for a demonstration in front of the White House, came into the presence of the police judge. Twenty-two of the suffragists were given jail sentences, and were released after they had hunger-struck for several days.

In Japan is a tall stone monument erected as a memorial to the horses killed in the Russian-Japanese War. It stands in the public park of the town of Sano in the Tochigi Prefecture. General Viscount Oshima, one of the heroes of the war, wrote the principal inscription, from which it appears that 1260 horses from the county and vicinity are so remembered.

A company for the manufacture of paper from esparto grass is being organized in Algiers, Algeria, with a capital of $579,000. According to the American consul Algeria has an almost unlimited supply of esparto grass, there being over 12,350,000 acres of "alfa," as it is called, which could give an approximate production of 400,000 metric tons.

THE I. S. U. OF A. CONVENTION.

(Continued from Page 2.)

be cured, they will be sent back home at the vessel's expense. If they are suffering from some contagious disease they will not be permitted to mix with the population, but will be segregated and when fit to travel, they will be sent home at the expense of the vessel. It is easy to understand what this will lead to. In time Races or Nationals which are especially subject to contagious diseases will not be brought to the United States, because it will be too expensive.

Another conference of more than ordinary importance took place in the offices of the Shipping Board on Oct. 29th, 1918.

Commissioner Page stated the meeting was called for the purpose of having the Board consider and determine the principles to be embodied in the instructions to be sent shipowners operating under direction of the Shipping Board on the Pacific. The fundamental question is: "Shall the crews be made up of Union men and graduates from the training service, or shall these vessels run on as open shop?" He also stated that this would involve the Atlantic agreement in so far as the agreement read that the Union men should have the preference in furnishing 60 per cent. of able seamen.

Commissioner Page was in favor of the open shop. (Commissioner Page is entrusted with the labor policy of the Board, and he wanted the sanction of the whole Board for his policy of the open shop). He also claimed that the Presidential proclamation made no change during the war, and that this was the justification for his position.

Speaking for the Seamen, I stated that the Presidential proclamation relative to standards, the proclamation establishing the War Labor Board and the Presidential address of October first, as justification for the continuation of the Atlantic agreement, its application to the Pacific, and for the continuation of the Atlantic instructions of July 30th and August 24th, as they now stand without any amendments. In support of this I stated that more than 98 per cent. of the tonnage on the Pacific, about 75 per cent. of the oversea trade on the Atlantic, and more than 50 per cent. of the Coastwise trade on the Atlantic were, prior to the war, operated exclusively as Union snop, and that more than 30 per cent. of the Lake tonnage was operated as Union shop by mutual understanding that was not reduced to writing. The International Seamen's Union voluntarily agreed to the dilution of the vessels' crews in order that young men might come into the service and be taught seamanship. There was no agreement that the membership of the organization should surrender the Union Shop, except to the extent of admitting young men as ordinary seamen and boys, and by mutual consent to the changing of ordinary seamen and boys to graduates of the training service. The proposition of Commissioner Page is a clear violation of the agreement entered into between the Shipowners, the Shipping Board, the organized Seamen, and approved by the Secretaries of Commerce and Labor. It was pointed out that the skilled seamen would quit, none would return to the sea if this agreement was violated.

Mr. Rosseter, Director of Vessel Operation, and Mr. Cook, his assistant, sustained the position taken by Commissioner Page.

Mr. Bass took the same position in its entirety as did the Seamen. Mr. Howard suggested that owners who ran their vessels Open Shop prior to the war should remain so, and that owners who ran their ships Union Shop, should also remain so.

Representatives of the Seamen objected to this on the ground that a large number of vessels that carried union men prior to the war were now operating with naval reserves, thereby reducing the opportunity of employment for the skilled merchant seamen, and driving them from the calling, contrary to the best interests of the United States. The question also arose over new vessels, whereupon Mr. Bass said the general policy of the Government in other vocations was to extend the Union principles to all business expanded by the Government in industries and localities where the Union has the majority. P. J. Pryor brought the attention of the Board to the fact that the rules as promulgated by the Shipping Board August 24th were the rules adopted by the membership of the Eastern and Gulf Sailors' Association in June, 1916, and were accepted by a large majority of the shipowners on the Atlantic; so in view of this fact the Union gained nothing in working conditions other than they had prior to the war. The Commissioners took the whole matter under advisement and no new instructions have been issued to date.

The "Call to the Sea," adopted at our last convention, has received much favorable comment and publicity. So has the booklet issued by the International Union under the title, "A Message to Seamen."

I can also report that five letters which I wrote for the New York Evening Post on the Seamen and the Seamen's Act, were printed in the Congressional Record at the instance of Congressman Raker of California. Fifteen thousand of these were printed for our use at cost price.

In conclusion, I want to direct attention to the memorable Message to Seamen, issued by the President of the United States in the early part of October. I recomend that this message be printed in full as an appendix to the convention proceedings, and will close my report with this brief but meaningful excerpt from the President's Message:

"No more honorable or serviceable task can come to any of our people than that of manning our Merchant Marine."

Fraternally,
ANDREW FURUSETH.

New York, N. Y., Dec. 4, 1918.

ADDENDUM.

Since President Furuseth wrote his report and since the Attorneys submitted their summaries the United States Supreme Court has rendered adverse decisions in the "Rhine," "Windrush" and "Talus" cases.

As in previous cases affecting an interpretation of the Seamen's Act, both were "five" to "four" decisions.

The majority and minority opinions in the "Talus" case are printed in full in the issue of The Journal of January 15. The majority and minority opinions in the "Rhine"-"Windrush" case will appear in full in the issue of January 22.

In both cases, the decision as to validity of advances made in foreign ports on American and foreign vessels, was evidently based solely on the ground that Congress had not sufficiently expressed its intention on that subject. The five Justices who rendered the majority opinion admit in other words, that advance notes and contracts to pay advance notes are contrary to the public policy of the United States when made within the United States. They admit that Congress can make any rule or regulation it sees fit as to foreign vessels, in the absence of treaty provisions, and that such regulations are binding upon such foreign vessels as a condition of entry. This was a point ably argued by the Attorney-General.

Mr. Justice Day, who delivered the majority opinion of the Court, says that from the records of the committees in Congress and the wording of the statute, they fail to find evidence of an intention to affect advances made in foreign countries where such advances are lawful. The remedy is evident. An amendment of the Act by Congress inserting after the word "advance," "whether made in foreign ports or domestic ports" or some such words, will cure it and no further litigation on the statute will be necessary or possible.

In the Dillon vs. "Strathearn" case relating to the constitutionality of the Seaman's Act, the entire subject was dismissed on a mere technicality. The Supreme Court apparently did not care to finally pass upon the case, perhaps in view of the negotiations of the Peace Congress or for other reasons. At any rate, they saw fit to send the certificate which had presented the question of constitutionality, before them, back to the United States Circuit Court of Appeals for the Fifth Circuit. It is now up to the counsel to proceed to try the cases there or again have the question certified up with the complete record.

Secretary-Treasurer T. A. Hanson reported, in part, as follows:

SECRETARY'S REPORT.

Since our last Convention the whole of our national activity has been focused on the conduct of the war in which we were engaged and the men who constitute our crafts were necessarily engaged primarily in matters concerned with war transportation, therefore several of the subjects presented herein reflect on such problems and eliminate to some extent, the work usually brought to the attention of the various conventions.

Liberty Loan Bonds.

The International office endeavored to secure statistics from the district unions as to the purchase of Liberty Bonds by the Unions direct as well as by their individual members, and while few district unions were able to give accurate information to fully cover the subscription of all, there is no doubt that the Unions of seamen as well as their memberships purchased large amounts of these securities.

It will therefore be impossible to report any amount that would be reasonably near the actual subscription of these unions and their memberships to the Liberty Loan issues and the Canadian Victory Loan, not to mention the War Savings Stamps, as any figures that could be given from the compilation available would be totally misleading.

However, it can be stated with exact definiteness that the district Unions in the I. S. U. of A. subscribed $125,000 from their funds to the Liberty Loan issues and there is no question but that both the unions and their memberships have loyally and patriotically responded to the request of the nation in this respect.

Historical Information.

To assist the United States Shipping Board in its work and to prove the history of the district unions as well as that of the International with its total membership, the following information was supplied:

The International Seamen's Union of America.

Established April 22nd, 1892, and is composed of the following District Unions:

Name of Union	Date of Organization	Membership
Alaska Fishermen's Union	1902	3,500
Deep-Sea Fishermen's Union ...	1915	2,000
Eastern & Gulf Sailor's Assn.....	1888	10,500
Fishermen's Union of the Atlantic	1915	3,500
Marine Cooks & Stewards' Assn. of the Atlantic	1901	3,000
Marine Cooks & Stewards' Union of British Columbia.....	1918	500
Marine Cooks & Stewards' Union of the Great Lakes.....	1902	1,700
Marine Cooks & Stewards' Union of the Pacific	1901	2,000
Marine Firemen, Oilers & Watertenders' Union of Atlantic....	1902	8,000
Marine Firemen, Oilers & Watertenders' Union of Great Lakes	1888	3,200
Marine Firemen, Oilers & Watertenders' Union of Pacific	1883	3,000
Marine Firemen and Oilers' Union of British Columbia.....	1917	500
Sailors' Union of the Great Lakes	1878	3,000
Sailors' Union of the Pacific ..	1885	5,000
United Fishermen of the Pacific	1906	600
Total		50,000

Recapitulation.

Cooks	7,200
Fishermen	8,600
Firemen	14,700
Sailors	18,500
Total	50,000

Practice of Uniformity.

As a result of past efforts by the International Union in its advocacy of a more uniform practice by all district unions regarding charges of initiation fees, monthly dues, etc., as well as the payment of benefits and other things concerning the membership, it can be reported that the progress made in this respect has nearly eliminated all former differences and will, as soon as the questions are understood, permit the realization of these problems in its fullest terms.

The information regarding this subject is furnished by the district unions and has been

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.
2. Free schools, free text books and compulsory education.
3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.
4. A work day of not more than eight hours in the twenty-four hour day.
5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.
6. Release from employment one day in seven.
7. The abolition of the contract system on public work.
8. The municipal ownership of public utilities.
9. The abolition of the sweat-shop system.
10. Sanitary inspection of factory, workshop, mine and home.
11. Liability of employers for injury to body or loss of life.
12. The nationalization of telegraph and telephone.
13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.
14. Woman suffrage co-equal with man-suffrage.
15. Suitable and plentiful playgrounds for children in all cities.
16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.
17. Continued agitation for the public bath system in all cities.
18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.
19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

compiled by the International office as shown in the table below. The fees are the initial charge for admittance into the respective unions. The charges of dues are on a monthly basis excepting the Alaska Fishermen who charge a seasonal amount. The death or funeral expense is alike in all district unions excepting the Pacific Sailors and Cooks who have their own cemetery lots and thereby reduces such expense. Payment of hospital benefits are made on a weekly basis, but in the case of the Atlantic Cooks the members pay a higher dues to meet the higher payments of such benefit. Exemption from payment of dues in case of sickness as well as free transfer is practiced by all as indicated in the following statement:

District Unions	Fees	Dues	Death	Ship-wreck	Hospi-tal	Sick Dues	Free Trans.
Atlantic Cooks	$10.00	$1.08⅓	$100.00	$25.00	$7.00	Granted	Practiced
British Col. Cooks	5.00	1.00	100.00	.....	...	"	"
Great Lakes Cooks	5.00	1.00	100.00	30.00	.50	"	"
Pacific Cooks	10.00	1.00	75.00	50.00	.50	"	"
Alaska Fishermen	10.00	.83⅓	100.00	50.00	1.00	"	"
Atlantic Fishermen	5.00	1.00	100.00	50.00	.50	"	"
Deep-Sea Fishermen	5.00	1.00	100.00	50.00	.50	"	"
United Fishermen	....	....	.....	.....	...	.....	.....
Atlantic Firemen	5.00	1.00	100.00	50.00	.50	"	"
British Col. Firemen	5.00	1.00	100.00	.....	....	"	"
Great Lake Firemen	5.00	1.00	100.00	30.00	.25	"	"
Pacific Firemen	15.00	1.00	100.00	50.00	1.00	"	"
Atlantic Sailors	5.00	1.00	100.00	50.00	.50	"	"
Great Lake Sailors	5.00	1.00	100.00	30.00	.25	"	"
Pacific Sailors	5.00	1.00	75.00	50.00	.50	"	"

Executive Board Actions.

First: In accordance with the plans of the Buffalo Convention, two hundred dollars ($200.00) were appropriated from International funds to assist the Lake Cooks and Vice-President Griffin was authorized to supervise the expenditure of said sum by the Executive Board.

Second: For defense of the Seamen's Act the Buffalo Convention authorized the Executive Board to assess the District Unions for sufficient funds for this purpose. In accordance with this, the following apportionment of funds was submitted and same has been paid by all District Unions to the International treasury:

APPORTIONMENT.

Union	Cash on Hand March 31, 1918	Percentage	Appropriation
Alaska Fishermen's Union	$56,654.00	2%	$1,133.00
Deep-Sea Fishermen	20,795.00	"	416.00
Eastern & Gulf Sailors	63,125.00	"	1,263.00
Fishermen's Union of Atlantic	16,447.00	"	329.00
Lake Seamen's Union	7,740.00	"	155.00
Lake Firemen's Union	26,008.00	"	520.00
Atlantic Firemen's Union	50,159.00	"	1,003.00
Pacific Firemen's Union	68,627.00	"	1,373.00
Atlantic Cooks' Union	25,932.00	"	519.00
Pacific Cooks' Union	27,034.00	"	541.00
Sailors' Union of the Pacific	100,623.00	"	2,012.00
Total	$463,144.00		$9,264.00

Third: On recommendation of the Marine Firemen, Oilers and Watertenders' Union of the Pacific who have jurisdiction in that district, the Executive Board voted to grant a charter to the Marine Firemen and Oilers' Union of British Columbia and that body of men are now a part of the International Union.

Fourth: A charter was granted to the Marine Cooks and Stewards' Union of British Columbia by the Board after consulting the Marine Cooks and Stewards' Association of the Pacific on the matter and who agreed that this was the best way to establish an organization of said craft in that locality.

Fifth: The Board voted to donate fifty dollars from the International treasury for the support of the National Popular Government League in its work and the money has been paid said League by the SecretaryTreasurer.

Atlantic District Unions.—Atlantic Cooks.

While the Marine Cooks' and Stewards' Association of the Atlantic has furnished no detailed report summarizing the progress made since our last Convention, it is apparent from other sources of information that gains have been made both in strength of membership as well as in the treasury, regardless of war conditions which reduced the crews employed in the Stewards' Department on passenger vessels.

In numerical and financial strength, this Association ranks first among the Cooks and Stewards in the International Union and its system of organization corresponds well with the policies advocated by the mother organization in that it admits men of this craft to membership under liberal conditions and practices free transfer with all maritime unions.

With headquarters established in New York City, it directs the operation of eleven branches along the Atlantic and Gulf District and cooperates with the Sailors and Firemen in all matters pertaining to further advancement of conditions surrounding the seamen in that district.

Atlantic Firemen.

The personnel of the Marine Firemen, Oilers' and Watertenders' Union of the Atlantic and Gulf is more of a mixed nature than that prevailing in other district unions of similar crafts and it requires great diligence in management to maintain and continue the splendid results obtained by the present organization of firemen in the Atlantic district. Said Union is now numerically the strongest body of firemen in the international and will soon out-distance its rivals financially if the prevailing spirit of self-government is permitted to continue.

In conjunction with the Sailors and the Cooks of that district, it has been possible for the firemen to eliminate the difference in wages formerly existing between the Atlantic and Pacific Coast and the equalization in overtime pay and other conditions has also been accomplished.

Atlantic Fishermen.

The history of the present union of fishermen in the Atlantic District dates back to 1915 and its growth in membership, funds and extension of operation since that time is surprising even to the most hopeful of those who conceived the idea and laid the foundation for an organization which now has nearly four thousand members within its fold as well as a substantial treasury to meet their obligations.

Atlantic Sailors.

The Union of Sailors in the Atlantic district, known as the Eastern and Gulf Sailors' Association, has since its formation in 1888, experienced several momentous periods and as its geographical location serves as the gateway for the overflow of European sailors, it has, up to the historical epoch of the passage of the Seamen's Act, labored under a burdensome handicap and has been prevented from obtaining for its members any very material improvement in conditions.

Since the enactment of this emancipating law, seamen in general have been imbued with new hopes for real freedom and its beneficial features are more clearly demonstrated in the Atlantic district by the steady rise from obsolete standards than in other sections of our maritime divisions.

This organization which was assumed to be "The baby that couldn't grow but wouldn't die" is now the first in rank of membership and second in lead in possession of funds among the district unions in the International. It operates and directs eleven branches along the Atlantic and Gulf Coast from its headquarters in the city of Boston where the nucleus of the present association first came into existence.

Great Lakes District Unions.
Great Lakes Cooks.

Through the provisions made by the Buffalo Convention, the Marine Cooks and Stewards of the Great Lakes succeeded in making encouraging gains during the past season and from a small membership with a very low treasury it proceeded to reclaim its former place in the International Union with creditable results. Increases in wages and improved conditions were obtained for the members and under the present conditions and management, it is reasonable to believe that its influence will receive respectful consideration in further dealings with lake shipowners this coming season.

Great Lakes Firemen.

The Marine Firemen's Union of the Great Lakes is now the strongest in membership and funds of any of the sister unions in that district and it has shared equally with the sailors in all improvements of conditions and wages which took place on the Great Lakes during the past season.

Great Lakes Sailors.

This Union was formerly known as the Lake Seamen's Union and adopted its present title by referendum vote effective May, 1918. Its headquarters are located at Chicago, Ill., and maintained eleven branches in the principal Lake Ports during the season of 1918.

The membership during the year averaged about twenty-five hundred which is an increase in number over that of previous years and it has during the said period added considerably to its treasury.

Wage Scales in Atlantic Overseas Trade.

Seamen in the Atlantic overseas trade, in the war zone, are now receiving the following rates per month:

Boatswains, $127.50; Carpenters, $135.00; Carpenters' Mates, $127.50; Boatswains' Mates, Oilers and Watertenders, $120.00; Able Seamen and Firemen, $112.50. All overtime work is paid for at overtime rates.

Pacific District Unions.
Alaska Fishermen.

One of the most important groups of men in the fishing industry of the Pacific Northwest, are the Alaska Fishermen's Union, whose members are principally engaged in salmon fishing along the Alaskan Coast during the seasonal period. With a yearly average of over three thousand members, this union has during several years, conducted its affairs under an agreement system with the employer's and has succeeded in building up a treasury which in itself reflects great credit on its members as well as its chosen representatives who are entrusted with its guardianship. Besides its headquarters, which is located at San Francisco, Calif., it operates two branches, one at Astoria, Ore., and the other at Seattle, Wash., and its support to the local as well as to the general labor movement is 100 per cent through its correspondingly voluntary affiliation.

During the war, a large percentage of its members served with the colors, while those not in actual service, contributed means to insure its successful outcome and as evidence of same, the records show that $15,000 of its funds were contributed to the support of the country while the individual members purchased bonds for the liberal amount of over $200,000.00.

Numerically and financially, the Alaska Fishermen's Union shows a gain over that of last year and the individual members were successful in obtaining an increase of 75 per cent in wages and percentages for season of 1918.

Pacific Cooks.

During the period of the war, the Marine Cooks' and Stewards' Association of the Pacific Coast experienced considerable reduction in membership. Some of the more important factors in this was the call for voluntary enlistment to men of British birth who left the association and joined the Canadian forces, the commandeering by the Government of all large ships from the Pacific Coast which necessitated the calling in of all naval reserve men to man such vessels, the drafting of seamen into service in the Army and the patriotic manner by which the association co-operated with the Shipping Board in furnishing teachers on training ships in preparation for manning the future Merchant Marine, all of which contributed to a steady decrease in its ranks. But this condition is now disappearing and an upward movement has already set in which will shortly restore it to its former average and permit further extension of this association.

Through joint efforts with unions of sailors and firemen, the Cooks' and Stewards' Association were successful in getting an increase of fifteen dollars per month for their members and entered into an agreement to that effect for the period of one year with the shipowners and with the sanction of the U. S. Shipping Board which co-operates in this respect with both parties.

Pacific Firemen.

The Pacific Firemen acting in conjunction with the Sailors and Cooks secured from the shipowners in that district and with the sanction of the U. S. Shipping Board an advance in wages of 25 per cent over that of the previous year besides increases in overtime pay, subsistence money, forecastle accommodations, etc., and improved working conditions, were also granted. As a result of its organized efforts and with freedom and protection evolving from the Seamen's Act, the men of this craft have made wonderful progress individually as well as in a national sense and are demonstrating to the general public that the eight-hour basis of labor can be extended to seamen without injury to the shipping industry.

Twenty-five per cent of the membership of this union was doing actual service in the Army or Navy during the war while the balance performed duty in the Merchant Marine and contributed over $250,000 to sustain the nation in its work and $20,000 of the Union's funds was assigned for similar purpose.

An exceedingly large number of men have been admitted to membership during the past year, this to offset the steady decrease created by the conditions of war and which had to be met to maintain the standards.

British Columbia Firemen.

A charter was granted by the International Seamen's Union to the Firemen and Oilers' Union of British Columbia last June and while said organization is still small in number on account of its limited field of operation, it has

nevertheless, during a short period of time, proven itself a beneficial institution to the men composing the engine room crews on steamers operating in that locality.

British Columbia Cooks.

Through the recommendation of the Marine Cooks' and Stewards' Association of the Pacific, whose organization has jurisdiction over that craft in said district, it was made possible for the Executive Board to grant a charter to the Marine Cooks of British Columbia, who in April, 1918, applied for affiliation.

Since the issuance of said charter, the men of the stewards' department on steamers trading along the coast of Brtish Columbia have made a good showing in organizing locally and as this field of opeation in this respect is limited it is expected that said body of men will in the near future also extend their activities to vessels in the foreign trade and thereby speed the work in which we are engaged.

Sailors' Union of the Pacific.

The Sailors' Union of the Pacific, ranking as one of the oldest and best conducted institutions, can undisputedly claim credit for possessing the largest treasury and is among the strongest in number of any sister union in the Internationnal.

Regardless of the number of aliens who were affected through a condition of war by being prohibited from sailing and besides the large percentage who served with the colors which increased the reduction, the union, nevertheless, was able to gather sufficient new recruits to its roster to overcome this unusual turnover in membership

During the year, the Union recast its constitution which now is an up-to-date instrument capable of meeting present day conditions and it is the pioneer in practicing all international proposals that have during the past years demonstrated to the general membership its soundness of principle as well as a principal factor in the progress of the Seamen's Movement.

That the Union of Sailors in the Pacific District is a respected factor in determining the wages and conditions affecting the men is evidenced by the increase granted by the shipowners who with the sanction of the U. S. Shipping Board consented to advance the wages 25 per cent in all vessels. Overtime pay was increased to 60c per hour and $5.00 a day was allowed to men working on vessels out of commission. Changes were made in the working of the crews which change eventually will lead to the establishment of the eight-hour day in this district. An agreement in accordance with this was entered into with the shipowners and such agreement will run for one year and continuously thereafter until abrogated by either party by thirty days' notice in writing.

Seamen's Journal.

Through the action of the membership of the Sailors' Union of the Pacific, the name of the official organ of the seamen was changed from its former title "Coast Seamen's Journal" to the present name "Seamen's Journal" and by such action conformed with the desire of the general membership by making this publication more national in scope as well as a persisent pioneer voicing the right of all seamen in their struggle for human freedom and equality with that of the most favored workers.

Finances.

The transactions of the International office dealing with finances cover a period of fourteen months from November, 1917, up to date, 1919, and are hereby submitted in detail both as to the debit and credit accounts of the Secretary-Treasurer as follows:

Receipts.

Alaska Fishermen's Union:	
Per Capita Tax	$ 1,531.32
Appropriation	1,485.71
Deep-Sea Fishermen's Union:	
Per Capita Tax	1,064.70
Appropriation	858.00
Eastern and Gulf Sailors' Assn:	
Per Capita Tax	4,911.85
Appropriation	2,193.00
International Membership Books	158.00
Fishermen's Union of the Atlantic:	
Per Capita Tax	1,978.10
Appropriation	626.00
M. C. & S. Assn. of the Atlantic:	
Per Capita Tax	1,938.90
Appropriation	1,576.00
M. C. & S. U. of B. C.:	
Per Capita Tax	38.75
Charter Fee	10.00
M. C. & S. U. of the Great Lakes:	
Per Capita Tax	458.93
M. C. & S. U., of the Pacific:	
Per Capita Tax	1,548.70
Appropriation	1,713.00
M. F. O. & W. U. of the Atlantic:	
Per Capita Tax	4,440.25
Appropriation	1,770.00
M. F. & O. U. of British Columbia:	
Per Capita Tax	73.60
M. F. O. & W. U. of the Great Lakes:	
Per Capita Tax	1,632.35
Appropriation	1,063.00
M. F. O. & W. U. of the Pacific:	
Per Capita Tax	1,998.10
Appropriation	3,214.00
Sailors' Union of the Great Lakes:	
Per Capita Tax	1,326.00
Appropriation	406.00
International Membership Books	158.00
Sailors' Union of the Pacific:	
Per Capita Tax	4,005,85
Appropriation	4,400.00
United Fishermen's Union:	
Per Capita Tax	204.90
Miscellaneous	20.11
Total	$46,803.12

Disbursements.

A. F. of L. Convention expense.	$ 2,714.97
A. F. of L., per capita dues and assessments	4,787.50

Traveling on account of Peace Conference	1,000.00
Total	$40.737.23

Recapitulation.

Cash on hand Nov. 26, 1917	$ 4,613.49
Total receipts	46,803.12
Total	$51,416.61
Total disbursements for 13 months	$40,737 23
Cash on hand Jan. 20, 1919	10,679.38
Total	$51,416.61

Recommendation.

As the aggregate membership of the International Seamen's Union of America has now reached the fifty thousand mark and as prospects for further increases in that respect are good, it will be an epoch in our history for this convention to lay a foundation for some of the most important matters concerning the district unions and upon which the International Union may function the general desires of the membership. Some of these matters which are recommended for consideration are as follows:

First: The formulation and adoption of a more uniform constitution by all district unions.

Second: The reconstruction of the International constitution to comply with growing tendencies.

Third: The extension of the International membership book to Cooks, Firemen and Fishermen.

Fourth: The formulation of plans for the establishment of a more extensive International office.

Fifth: The creation of a fund and the construction of a practical system whereby aged seamen may be assisted.

U. S. MARITIME LAW SUPREME.

(Continued from Page 7.)

contemplated no services in California. They were making an engagement for the services of the master of the vessel. the duties to be performed in the waters of Alaska, mainly upon the sea. The maritime law controlled in this respect, and was not subject to limitation because the particular engagement happened to be made in California. The parties must be presumed to have had in contemplation the system of maritime law under which it was made, Watts vs. Camors, 115 U. S., 353, 362.

In different countries the appointment of masters of vessels has been the subject of maritime law which has directed the conduct of "those who pursue commerce and put to sea." Their duties and qualifications have been the subject of regulation by the recognized principles of admiralty law. Benedict's Admiralty, Fourth Ed., Sec. 146. They are regulated by statutes enacted under Federal authority. See U. S. Comp. Stats. of 1916, V. 12, Index "Masters of Vessels."

If one State may declare such contracts void for one reason, another may do likewise for another. Thus the local law of a State may deprive one of relief in a case brought in a court of admiralty of the United States, upon a maritime contract, and the uniformity of rules governing such contracts may be destroyed by perhaps conflicting rules of the States.

We think the Circuit Court of Appeals correctly held that this contract was maritime in its nature and an action in admiralty thereon for its breach could not be defeated by the statute of California relied upon by the petitioner. Affirmed.

Labor News

The Pennsylvania Health Insurance Commission finds that sickness is the largest single factor toward poverty.

Women elevator operators, who have been employed at the Fairmont hotel in San Francisco for the past eighteen months, have been replaced with men. While complimenting the service performed by the women, Superintendent of Service Strong said that men elevator operators were preferable.

"When the men in the Army are demobilized," said Frank Morrison, secretary of the American Federation of Labor, before the House Immigration Committee, "we are going to have bread lines in every industrial center by May 1. After that date it is hoped that building will pick up and take some of the men."

Complaints by the International Molders' Union against seventy-three foundries in Boston and vicinity, asking that the War Labor Board establish an eight-hour day in the industry, were dismissed, the board holding that the case was brought in an attempt to force an eight-hour day upon an industry "in which, so far as the record shows, there were no existing labor difficulties."

The American labor party of New York has been formed by the Central Labor Union, representing 300,000 organized workers. The platform adopted by the organization demands that no war shall be declared without a vote of the people, calls for a 44-hour week, restoration of free speech, free press, free assemblage and free worship; demands free college and university training for all who qualify, better working conditions for women workers, and many other reforms.

A survey of the wage rates existing in the District of Columbia has been made by the Department of Labor. This survey is a striking example of the value of economic power, as against legislative action in the adjustment of wage rates. The figures contained in the department survey show the wages paid in Government departments, union and non-union establishments. It is found that the union establishments pay the highest rate, non-union establishments pay less, and the Government pays the lowest wage of the three.

Following the lead of the local boilermakers, who won their point some weeks ago only after a strike, the Oakland machinists will take Saturday afternoon off in the future beginning with January 18. This applies both to the shipyards and to the outside shops. For some time past the laborers employed in the Oakland shipyards have been taking the Saturday half holiday. Officials of the union stated that should the machinists in the outside shops take Saturday afternoon off the shipyard laborers have been instructed to do the same. With the boilermakers, machinists and shipyard laborers out of the shops on Saturday afternoon the majority of the working force will be gone and it will be practically impossible for work to be carried on. As a result Saturday afternoon hereafter will become a half holiday for all skilled mechanics in the East Bay section, as well as for other workers whose duty lies along parallel lines.

A club within a club!

Existing clubs represent organizations already formed.

Why not propose, at the next meeting, that your club become a War Savings Society for the rest of the war?

Each member agreeing to buy at least one War Savings Stamp per month.

Besides the saving—

It becomes the popular thing to do with less; to make what you have last longer.

Incidentally, it gives the Government a better market wherein to purchase things for soldiers.

INFORMATION WANTED.

Members of the crew of the SS. 'Brazos," which salvaged the SS. 'Iroquois," about March, 1918, should file, as soon as possible, with me, their claim for their share of the salvage money, or communicate with me at once, as I have noticed the case for trial, and confidently anticipate a verdict in the favor of seamen, for a considerable amount.

ISIDORE A. RABINOW,
Attorney for Seamen,
277 Broadway, Room 401,
New York City.
1-8-19

Members of the crew of the steam schooner "Florence Olsen" who signed articles at New York on September 15, 1918, for a voyage to Central America and return, and who were on board said schooner at the time she salved the steam schooner "Claremont" near the Tucker Islands, off the coast of Nicaragua, on October 31, 1918, and towed her into Christobal, will kindly communicate with Silas B. Axtell, 1 Broadway, New York City. 12-25-18

For the benefit of the widow of John Karus, lost at sea, October 17, 1918, at 2:15 a. m., according to the report in the official log of the barkentine "Aurora," will all members of the crew of that vessel who know anything about the ship, the condition of her rigging, before and after the accident, or anything that will tend to explain his disappearance, communicate with the undersigned attorney for the widow?—Silas Blake Axtell, No. 1 Broadway, New York City. 1-1-19

Members who were present at the time when W. Bodie met with an accident on board the S. S. "Eastern Sea," last July, are requested to communicate with the above named comrade, P. O. Box 65, Seattle, Wash. 11-6-18

Members of the crew of the S. S. "Fred W. Whellen" who were on board November 11, 1918, when she picked up the bark "Galica" should file their claims with this office and be joined in libel which is being filed by the undersigned on behalf of the members of the crew. Silas B. Axtell, 1 Broadway, New York City. 12-25-18

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life

Send in your order today.

INFORMATION WANTED.

Members of the crew of the steamer "Brazos" who were on board when she picked up the S. S. "Iroquois" can obtain money due them for such salvage services by communicating with Silas B. Axtell, attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 7-31-18

Members of the crew of the S. S. "Argonaut," who assisted in the salvage services to the S. S. "Jason," at the time she was in distress off the coast of Florida, on or about January 1st, 1918, will kindly call or communicate with the undersigned who is representing most of the officers and crew of the S. S. "Argonaut." Silas B. Axtell, One Broadway, New York City. 7-24-18

Einar Jensen, who was on the S. S. "San Pedro" when three seamen were left ashore at La Paz, Mexico, will please communicate with F. R. Wall, 324 Merchants' Exchange Bldg., San Francisco, Cal.

Charles L. Carlsen, No. 1834, who disappeared from the barge "Isaac Reed" at Eureka, California, on December 31, 1918, is inquired for by his wife, Mrs. C. L. Carlsen, 107 Courtland Ave., San Francisco, Cal.

Anyone knowing the whereabouts of Daniel Shean, last heard from at Cleveland, will kindly communicate with his brother, Richard Shean, 7014 Cedar Ave., Cleveland, Ohio. 11-6-18

Home News

Fires in the United States take an annual toll of more than 15,000 lives and cause a property loss of approximately $250,000,000.

Corporations will pay income taxes of 12 per cent. on their 1918 earnings and 10, instead of 8, per cent. thereafter, under agreement reached by Senate and House conferees on the war revenue bill.

The motto "Liberty, Equality, Fraternity" would replace "E Pluribus Unum" on silver dollars hereafter minted, under the terms of a bill introduced by Representative Schall of Minnesota.

Payment by the government of a pension of $5000 a year to Mrs. Edith Carew Roosevelt, widow of Colonel Roosevelt, was proposed by a bill introduced by Representative Sullivan of Massachusetts.

The indictment against the Socialist magazine, The Masses, and five of its editors and contributors, charged with violation of the espionage act, was dismissed at the instance of Attorney General Gregory.

Flour, amounting to 7555 tons and valued at $1,465,000, on board the steamer West Cape, in New York harbor, has been bought and will be sent at once to Beirut and Constantinople for distribution throughout Asia Minor.

Pure food for hogs, pure food for sheep, for poultry, for cattle. That is what the Legislature of California is to be asked to provide. The California Swinebreeders' Association is back of the programme. They purpose to have their hogs protected.

Twenty-one persons were killed, three seriously injured, one perhaps fatally and seven others slightly hurt on the New York Central at South Byron, when the Southwestern Limited, west bound, crashed into the rear end of the Wolverine standing at the South Byron station.

The principal licensed pork packers of California in establishing their prices for February will follow the example set by the Chicago markets and will adhere to an agreement to pay not less than 1 cent under the Chicago minimum price for the remainder of January supply.

The California State Legislature is to memorialize Congress to enact a universal citizenship law providing that all aliens shall take out full naturalization within a reasonable time after they become eligible, with the penalty in failure of so doing of being forever ineligible to citizenship and subject to deportation.

California's fish canning industry has developed in volume and value over ten times within a period of two years and is the equal of the fish canning industry of Maine and second in value to the salmon canning industry of Alaska. This is the statement of Ralph P. Merritt, former State food administrator, in a letter to Governor Stephens and the members of the State budget board.

The State of California is going into the dental business on a State-wide scale, according to the plans for establishing dental offices under State operation made public by Assemblyman N. J. Prendergast of San Francisco. A bill is being prepared by which the State will maintain self-supporting dental offices in the larger cities of the State, according to the needs of the population, where, under direction of competent practitioners, work will be handled.

Domestic and Naval

The Belgian newspaper "Liberte" announced that the Cunard Steamship Company has decided to open offices at Antwerp and has applied for a site on the Norddeutscher Lloyd pier.

The "convict ship" "Success," a visitor at nearly every port on the Seven Seas, met a freshwater disaster, having been sunk in a flood of the Ohio River recently near Wheeling, W. Va. The vessel is in shallow water and may be raised.

The entire crew of the Japanese steamer "Nanyo Maru" was lost when the vessel was sunk off Hokkaido, according to a dispatch from Kobe. The steamer was on its way from Kobe to Marseilles. The "Nanyo Maru" measured 3039 tons and was owned in Otaru, Japan.

The British steamship "Northumbria," 4215 tons, struck a mine off Middlesborough, and it is believed most of the crew was lost. A boat, with two survivors and eight dead, has been washed ashore at Newton Abbott. Four boats, which left the ship with members of the crew, are missing.

The members of the crew of the Gloucester schooner "Akrona," reported as in danger of starvation on the Labrador coast. have been rescued by the "Tallapoosa," a United States naval vessel, and are being taken to Halifax. The schooner was caught in the ice in Forteau Bay and wrecked.

The bureau of navigation of the Navy Department authorized the discharge of 20 per cent. of the men who enlisted for the duration of the war or who enlisted in the reserve force, and 10 per cent. of the four-year men who signed up between the declaraton of war and December 31, 1917.

Thirty days' leave will be given applicants for re-enlistment in the Navy. Those who have been recently discharged from the Army, Marine Corps or other branches of the military service enlisting in the Navy within thirty days from their last discharge are to be given thirty days' leave before they are ordered to duty.

The Norwegian mercantile fleet in the last four years of war has lost 127 vessels and decreased 760,742 tons in its total tonnage. At the outbreak of the war its fleet comprised 3405 vessels with a gross tonnage of 2,656,708. At the conclusion of the armistice it consisted of 3278 vessels with a gross tonnage of 1,895,966.

Discontent has made its appearance in the British grand fleet over the slowness of demobilization, especially among the auxiliaries whose duty it has been to sweep up mines. The crews of many of the auxiliaries were recruited from the fishing fleets and the men wish to share in the huge profits now being made by the fishermen.

The Navy board of selection recommended the following officers for promotion to the permanent rank of Rear Admirals: Harold P. Norton, John D. McDonald, Hilary P. Jones, Charles P. Plunkett, Joseph Strauss. The following were recommended for temporary rank of Rear Admiral: Benjamin C. Bryan, Wm. T. Howard, George W. Kleine, Archibald H. Scales, Victor Blue, Frederick Brewster Bassett, Jr., Richard J. Jackson.

INFORMATION WANTED.

A libel has been filed on behalf of the following officers and members of the crew of the steam-schooner "Florence Olsen" against the owners of the steam-schooner "Claremont" and the owners of the cargo, arising out of the salvage services performed by the "Florence Olsen" to the "Claremont" on or about the 31st day of October, 1918, off the coast of Nicaragua: George Muceneek, E. Kemfield, H. Julius, G. J. Borman, H. Nelson, Thomas C. Baird, S. A. Alm, Gaston Karlson, John Demliz, John Behrin, A. Von Sohendel, H. Hofstra, W. Christiansen, C. Anderson. The members of the crew who have not yet filed their claims with the undersigned can be joined by co-libelants' petition. An adjustment of this salvage claim is expected very shortly and no time should be lost in filing claims. S. B. Axtell, Proctor for Libelants, 1 Broadway, New York City.

The Public
A Journal of Democracy

Poverty is A Crime!

It isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

NAVIGATION INSTITUTE OF NEW ENGLAND
CAPT. JOSEPH T. DRAKE
Superintendent.
(Former Hull Inspector and Examiner at Boston, Mass.)
This Institute has been established to assist seamen to obtain licenses as officers of merchant vessels. All of our students are successful; there being no failures when passing for examination before the United States Steamboat Inspection Service. Our methods of instruction are evidently pre-eminent in securing highest possible license for eligible candidates. Tuition Fee very reasonable.
A Catalog and further information furnished on request.
Rooms 301-305 ADAMS BUILDING
9 Doane Street BOSTON, MASS.

INFORMATION WANTED.

Members of the crew of the S. S. "Macona," who signed Shipping Articles at New York about April 1st, 1917, are entitled to a share for salvaging the said ship when she was partly wrecked near Havre, France. Members of the crew of the said ship should file, with me, their claims for their share of the salvage money, which I am now trying to collect for other seamen.

ISIDORE A. RABINOW,
Attorney for Seamen.
277 Broadway, Room 401, New York City. 1-1-'19

Members of the crew of the S. S. "St. Charles," which salvaged the S. S. "Tea" in 1917, who have not yet filed with me their claim for their share of the salvage money, should do so as soon as possible, as the case will come up for trial in a very short time.

ISIDORE A. RABINOW,
Attorney for Seamen.
277 Broadway, Room 401, New York City. 1-1-'19

INFORMATION WANTED.

Members of the crew of the "Florence Olsen," who were on board the said steamship when she salvaged the "Claremont" on October 31, 1918, off the coast of Nicaragua and brought her to Cristobal, should file with me their claim for their share of the salvage money as soon as possible, as I am taking up on behalf of other members of the crew the collection of salvage money due them.

ISIDORE A. RABINOW,
Attorney for Seamen.
277 Broadway, Room 401, New York City. 1-1-'19

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

News from Abroad

In reforming the system of Prussian schools, the type of schools in the northern countries of Europe is to serve as a model.

"The entente has given us enough food to supply Vienna and the rest of German-Austria until Feb. 15", declared an official dispatch received from Vienna.

Belgian deputies returning from an official inspection of the battlefields, propose that Germany be forced to cede to Belgium a zone equal in area to the devastated area.

The Commercial Bank of Budapest has decided to sue former Emperor Charles for 1,000,000 crowns, which he subscribed to the eighth war loan and which he refuses to pay.

The corporation of the city of Cork has voted the freedom of the city to President Wilson as a mark of appreciation of the high principles enunciated for a settlement of the world peace.

Ignace Jan Paderewski was slightly wounded when several shots were fired into his hotel room at Warsaw, a dispatch from that city reported. Twenty Bolsheviks were said to have been arrested in connection with the shooting.

Socialists from allied countries will be called to meet at Brussels in the near future, according to an announcement made by the Belgian labor party. Among other work to be done will be the re-establishment of the Socialist International Congress.

Vilna has fallen into the hands of the Bolshevik army, several thousand strong, which drove out the Polish militia. A masscre of civilians began at once, partly because the Poles had offered resistance and had arrested or shot the members of the local Bolshevik committees.

An official announcement will shortly be issued by the Dominion government, it is learned, extending prohibition of liquor for another two years at least. As a war measure, Canada passed regulations a year ago forbidding importation of liquor and prohibiting shipments from one province to another.

Complete agreement has been reached by the inter-allied food council regarding relief for liberated territories and other affected sections. The plan includes permission for Germany to obtain food provided she turns most of her merchant ships over to the Allies for various uses, including repatriation of American troops.

It is announced that Raoul Villain, who assassinated Jean Jaures, the French Socialist leader, on July 31, 1914, will be brought to trial soon. M. Jaures was shot and killed by Villain while dining in a Paris restaurant. Villain was arrested soon afterwards and declared that he had shot the Socialist leader because Jaures had betrayed France in leading the campaign against the three-year military law.

The Manchester Guardian declared that Samuel Gompers, President of the American Federation of Labor, is forcing European workmen to sever completely the trades unions from all political movements. It maintained that Gompers' attitude was responsible for withdrawal of part of the parliamentary committee of the Trades Union Congress delegation to the International Labor and Socialist Congress in Lausanne.

With the Wits

"How stout Mrs. B is!"

"Yes, she can't even skip through a dull story."—Town Topics.

Mrs. Hatterson—Shopping?

Mrs. Catterson—Oh, no. I went out to buy something I wanted.—Life.

"He's out a good deal nights, I hear."

"Yes, he was last night. I won a hundred from him."—Town Topics.

Wally—You say her husband is stone-deaf?

Sally—Yes; she wants more diamonds and he won't hear of it.—Town Topics.

Mrs. Marlingdake (after the war)—How do you like my biscuits, Henry?

Henry (grumpily)—They ain't like what the army cook used to make.—The Spur.

Bess—So Van Speederly has inherited a million? How long will it last him?

Bob—That depends. If he blows it, ten years; if he invests it, about five.—Town Topics.

Mrs. Crabshaw—I can't imagine why I get so tired every time I go out.

Crabshaw—Perhaps, my dear, it's because of the enormous knitting-bag you lug about with you.—The Spur.

"Dad, I see in many wars there have been privateers."

"Well."

"Was a privateer the same as a profiteer?"

"By no means. A privateer preyed on the enemy, my son."—Kansas City Journal.

"I want to get some information," said the tired man with three suitcases.

"Why don't you apply to the bureau of information?"

"I'm working up to that. First I've got to get information as to how I can find the bureau of information."—Washington Star.

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Christensen's Navigation School

Established 1906

257 HANSFORD BLDG., 268 MARKET STREET

Under Capt. Christensen's personal and undivided supervision, pupils of this favorably known school are taught all up-to-date requirements for passing a successful examination before the U. S. Inspector.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 22. SAN FRANCISCO, WEDNESDAY, FEBRUARY 5, 1919. Whole No. 2524.

THE I. S. U. OF A. CONVENTION

A Summary of the Daily Proceedings

The 22nd annual convention of the International Seamen's Union of America was called to order by Percy J. Pryor on behalf of the local committee, in the Tremont Hotel, Galveston, Texas, at 10 a. m., January 20, 1919.

The delegates were officially welcomed to the city of Galveston by Mayor Kempner and City Commissioner Shay.

Temporary Chairman Pryor then called attention to the absence of President Furuseth, sent to Europe by a vote of the Executive Council to confer with the Executives of the various Seamen's Unions on current problems affecting seamen.

First Vice-President Patrick Flynn then took the chairman's gavel and in a few well-chosen remarks thanked the city officials for their hearty welcome and declared the convention open for business.

The report of the Committee on Credentials was then read, as follows:

Report of Committee on Credentials.

Your Committee on Credentials has examined the credentials of the delegates and the records of the Secretary-Treasurer and find that the following delegates are entitled to represent their respective unions with the number of votes set forth in the report in accordance with constitutional provisions.

The list of delegates and the votes to which they are entitled follows:

	Votes
Alaska Fishermen's Union, 24 votes.	
Hylen, I. N.	12
Thompson, J. V.	12
Deep-Sea Fishermen's Union, 17 votes.	
Meagher, J. H.	17
Eastern & Gulf Sailors' Assn., 76 votes.	
Brown, G. H.	10
Clausen, John	11
Cummings, Geo.	11
Giddy, Harry	11
Ingraham, Dan	11
Munnich, Chas.	11
Pryor, Percy J.	11
Fishermen's Union of the Atlantic, 30 votes.	
Brown, W. H.	15
Shea, Newman	15
Marine Cooks & Stewards' Assn. of the Atlantic, 30 votes.	
Cartledge, W. L.	10
Grange, D. E.	10
Griffin	10
Marine Cooks & Stewards' Assn. of B. C., 1 vote.	
No delegate.	
Marine Cooks & Stewards' Assn. of the Great Lakes, 8 votes.	
Secord, J. M.	8
Marine Cooks & Stewards' Assn. of the Pacific, 24 votes.	
Norkgauer, L. J.	12
Steidle, Eugene	12
Marine Firemen, Oilers & Watertenders' Union of the Atlantic, 68 votes.	
Carlson, Oscar	11
Krain, Morris	11
Lynch, James	11
McKillop, Peter	11
Olsen, John	12
Sullivan, Chas.	12
Marine Firemen & Oilers' Union of B. C., 2 votes.	
No delegate.	
Marine Firemen, Oilers & Watertenders' Union of the Great Lakes, 25 votes.	
Conway, Thos.	12
Ellison, J. W.	13
Marine Firemen, Oilers & Watertenders' Union of the Pacific, 31 votes.	
Clark, John	10
Flynn, Patrick	10
Harrington, C. J.	11
Sailors' Union of the Great Lakes, 21 votes.	
Hanson, T. A.	10
O'Brien, Patrick	11
Sailors' Union of the Pacific, 62 votes.	
Larsen, C. G.	15
May, C. F.	15
Rosen, Jack	16
Scharrenberg, P.	16
United Fishermen of the Pacific, 3 votes.	
No delegate.	

Respectfully submitted.

OSCAR CARLSON, Chairman;
PERCY J. PRYOR,
D. E. GRANGE,
W. H. BROWN.

The report of the committee was adopted.

Chairman Flynn then appointed the following committees:

Committee on Audit—Wm. H. Brown, Chairman; Geo. Cummings, D. E. Grange, Morris Krain, Harry Giddy.

Committee on Constitution—Percy J. Pryor, Chairman; C. J. Harrington, Eugene Steidle, J. H. Meagher, J. W. Ellison, C. G. Larson, Dan Ingraham, T. A. Hanson.

Committee on Legislation—Thos. Conway, Chairman; G. H. Brown, W. L. Cartledge, Newman Shea, Jack Rosen, Chas. Sullivan, P. O'Brien, P. Flynn.

Committee on Organization—H. P. Griffin, Chairman; John Clark, John Clausen, James Lynch, C. T. May, J. V. Thompson, J. M. Secord.

Committee on Resolutions—P. Scharrenberg, Chairman; I. N. Hylen, Oscar Carlson, Chas. Munnich, L. J. Norkgauer, Peter McKillop, John Olson.

Address of Fraternal Delegate Chambers.

The President then introduced Thomas Chambers, Fraternal Delegate from the National Sailors' and Firemen's Union of Great Britain and Ireland. Mr. Chambers spoke, in part, as follows:

Mr. President and Comrades:

At what we all hope to be the close of the great world war, when landsmen for the first time realized how far they are dependent on the men of the sea, I bring you, assembled in convention, the fraternal greetings of the organized seamen of Great Britain and Ireland. Personally I am no stranger amongst you, having most pleasant recollections of your conventions in New York in 1909 and Baltimore in 1911. At the date of the 1909 convention I was engaged in what had been called a somewhat crazy piece of work, namely, the endeavor to organize the seamen on British ships while they were in a foreign port. The job was not so crazy as it looked, as it led up to the great movement of 1911, when we rebuilt our organization and won the right for our men to control more of their own destiny than they had been able to for years past. The stirring doings of the year 1911 are now a matter of history and I am proud that I was privileged to take some small share in the work. From 1911 until August, 1914, things moved with us in a normal way. We had our ups and downs, our disputes with employers, and all the time rigidly safeguarding the things we had won in 1911. We had then a membership of, roughly, 80,000, with a reserve fund of something over £100,000, and were preparing to go still further ahead. The job we had in mind was the elimination of the Chinamen from the British mercantile marine, and a great effort would have been made to accomplish that. Wages had remained at the figure fixed in 1911, namely, £5 10 shillings per month for sailors and firemen, with a further 10 shillings per month for men serving on certain higher classed passenger liners.

Then came the outbreak of the great war, and we at once realized what we were up against, with perhaps the exception of the campaign of frightfulness and with the unrestricted submarine warfare. The men asked for a slight increase in wages to compensate them for the extra risk, and early in August, 1914, at a conference between the representatives of the British admiralty and ourselves, the first war bonus of one pound per month was awarded. I may mention that our policy all through has been to restrict any undue inflation of wages, as we felt that if wages were allowed to go to the figure which we could undoubtedly have demanded there would be trouble ahead of us at the end of the war. What we were really after was to keep our ships running with the minimum of friction, protect the interests of the men, and safeguard their organization. We have been successful in all three of these objects. No British ship has been delayed for one hour because the men were afraid to go to sea. A national standard wage of £11 10s. per month for A. B.'s and £12 per month for firemen has been fixed, with an additional bonus of £3 per month. The organization has been protected to the extent that a National Maritime Board, consisting of equal representatives of the union and the shipowners with a representative of the Ministry of Shipping as chairman, now controls three important matters:

1—The control of the supply of seamen for the ships.
2—Fixes the wages; and
3—Fixes the general working conditions.

These results have been only secured by the ceaseless vigilance of the union and its executive under the guiding hand of our General President Havelock Wilson. Of course, there were adverse influences at work from time to time, but we have been able to combat them all, and to-day the seamen of Great Britain stand where they belong, right in the forefront

of the workers, and there would be a bad time ahead for anyone who attempted to belittle them or their work. The union stands higher in prestige, strength and finance than ever it did. In spite of all our losses—some 17,000 men by the submarine campaign—we have a membership of about 70,000 to-day. We have paid out in benefits to members and their dependents for things directly attributable to the war, some £50,000, yet we have a reserve fund of about £170,000, say about $800,000, for fighting purposes if it's required. The members have voluntarily agreed to double their dues so long as wages remain at the present figure, and are willingly agreeing to pay that sum to keep their wages up. Altogether we are looking forward to the future with great confidence. Conditions on this side of the Atlantic, and your Seamen's Act have had a great influence in fixing our standard, and we realize that there must be a close co-operation in future so that we may maintain our high conditions with as little trouble as possible. We took an active part in the calling of conferences between the European allied and neutral seamen, which resulted in the formation of an International Seamen's Federation, whose principal object is to fix an international wage standard which must approximate to the highest now paid in any country. I am in hopes that the London conference of February 24th next will do much to realize this object.

You will note that so far I have made no reference to the seamen of the enemy countries, and this brings me to the chief reason for my visit to your country. In 1917 the results of the campaign of frightfulness on the high seas had become such that at a conference held in London in August of that year, where British, Scandinavian, French, Dutch, Belgian and Italian seamen of all grades, from the masters and certificated officers downwards, were represented, the policy of the boycott of Germany was initiated. That conference decided that the German flag should not be saluted on the high seas, that they would not work with Germans nor carry German goods until proper reparation had been made for the murders committed. This policy had nothing to do with tariffs, it had no economic basis; it was a punitive policy pure and simple. And it was to be applied to a country which had not forgotten the chivalry of the sea because it never knew it, and had consequently become an outcast amongst the nations. It was not a policy of hate. Seamen do not hate, as hatred is a sentiment born of fear, and as the seamen know no fear so they know no hatred. But they show a righteous indignation and horror at the crimes committed and they have resolved to punish those crimes themselves, in their own way, without calling on the governments for help in any form. It is to put our case before the people of this great nation that I am mainly here today. But I felt, and I am sure you will agree with me that I could not be here while your convention was in session without paying you a fraternal visit. May your labors be successful, and may the organized seamen of our great nations continue to co-operate for the working out of their own salvation independent of and in spite of all the interests that may unite to try and keep us apart.

Address of Fraternal Delegate Suzuki.

Chairman Flynn then introduced Fraternal Delegate Bunji Suzuki, President of the Laborers' Friendly Society of Japan, who spoke, in part, as follows:

Mr. Chairman and Comrades:

I am not going to make a speech to-day, but just deliver a greeting and talk somewhat of the seamen's conditions of my country.

A little over two years ago in December, 1916, I attended your twentieth annual convention of the International Seamen's Union of America in New York. At that time you kindly gave me a beautiful golden medal as a token of your friendship. I deemed it a great honor not only for myself but a great appreciation for my fellow workers at home. After I came back to my country I made a fine box of pawlonia and put the medal in it, keeping it carefully as a heirloom of my family. The other one, the delegate badge, my young brother, who is 16 years old and going to school, is proudly using as a watch fob.

Now, I feel my last visit to your country was an epoch-making event for the labor movement in our country, especially I believe, my attendance to your convention must be a historical incident for the organized movement of the seamen in Japan. Personally I was deeply impressed and encouraged seeing that your great union has a powerful influence upon society and nation, and that only through your indomitable spirit as well as your unyielding endeavor, you got your Seamen's Act, the twentieth century code of seamen, an eternal denotation of the triumph of labor. Coming back to my home I have done my best to cooperate with my associate, Mr. Hamada, who was for years a number one fireman on the steamships of the Nippon Yusen Kaisha Company, and is now the executive of our seamen's union, for the cause of seamen of my country. The membership of our seamen's branch now is about 6000 and I never doubt that before the end of this year the number will reach 10,000.

At present the average wages of seamen in Japan is about 30 yen per month. Boatswain and number one firemen get 60 to 70 yen per month with food and clothing. The Japanese seamen's condition has greatly improved compared with the conditions prevailing before the war, in fact the wages just doubled compared with several years ago, having been increased three times during this war, and almost all of it came from the exertion of organized labor.

Of course, our organization is still very young and small, and there is no comparison with your great organization, but we are quite hopeful, because signs of awakening of wage earners are evident all over the country. They are just beginning to understand the principles and benefits of the labor union, and "recognizing that organization is the only means by which the seamen may hope for the amelioration and final emancipation from the many evils attending their calling." Moreover, the capitalistic class still is very powerful in my country, but they are now feeling very uneasy of their own position, and they are quite at a loss how to handle the worldly waves of the labor problems. After our last rice riot they are just beginning to understand—and in a measure to recognize the labor organization. So through our inflexible exertion and with help of you, elder brothers of this country, I am sure, before many years we will have approached nearly, if not entirely, to your present standard of condition. Moreover, I may say, I am quite ambitious to plan a campaign to bring the wages and labor conditions in the mercantile marines, not only of my country, but all over the world up to the American standards, through the international co-operation of the seamen's unions of the world. Because just as a union is needed is to uplift the individual conditions, the international union is needed to elevate the standard of the organization of each country.

To talk about seamen's condition of Japan I have to tell you of the institution of the Japanese Seamen's Aid Society. The society was established in 1880 by so-called public-spirited men in my country. The aim of the society is to train and protect seamen; so among the members we have lots of peers, millionaires and retired naval officers. It has its branches in Yokohama, Osaka, Kobe, Nagasaki, and several other important places. It holds now more than 800,000 yen for its funds, and it professes to be at work to improve seamen's characters, to train seamen, to rescue seamen from distress, to take care in the hospital of injured and sick seamen, to have boarding houses for seamen, etc. However, this society was organized by so-called public-spirited persons. It is not an organization by seamen for seamen. So that it is doing practically nothing. It has contracted with shipowners and is functioning as an employment agency, controlling the seamen's movement though his seamen's certificate. It is quite certain that this instituton has restrained the free movement and the industrial emancipation of Japanese seamen. During the last forty years, Japanese seamen have laid down under this yoke on the sign board of a charity association, having been forbidden to have an organization for themselves because this was considered something like a conspiracy against their master. But now, the time has come, the kingdom of labor is being established. The seamen of Japan never again will be content with charity work. They want to have their own organization to protect themselves. The labor problem is not a problem of charity but it is a struggle for existence. The labor movement is not a social charity work, but it is a holy task to get a recognition that labor is human. It looks to me as if the rice riot in my country during the last summer is a revelation to emancipate the Japanese wage earners from the traditions and ancient circumstances.

On my way to this country I had plenty of time on board to study the real conditions of Japanese seamen. The crew of the T. K. K. Co. steamship "Shinyo Maru" on which I came across the Pacific, were all members of our organization. I have dined with them and talked with them almost every day in their own quarters, making speeches several times. After that I found out that all of them are quite ambitious to bring their wages and conditions to the American standards, and even the officers are eager to join us to promote their own conditions.

I am now en route to Paris, France, to attend the International Labor Conference which will be held there, so I am not able to stay until your convention has its final session. I greatly regret that my time is so limited as not to be able to talk with each of you personally. But I hope for and solicit your help and cooperation to build up our infant organization, and any kind of information about organized labor, especially on seamen, will be welcome always. I sincerely hope that some day the bond of friendship of our two organizations will bind the whole globe and that the time is not far distant when your International Seamen's Union shall realize its great ambitions and lofty ideals. I thank you for your kind attention.

REPORT OF COMMITTEE ON AUDIT.

To the Twenty-second Annual Convention of the International Seamen's Union of America:

Your Committee on Audit has carefully examined the books and accounts of the Secretary-Treasurer for the fiscal year ending January 20, 1919. We find that the various receipts and vouchers for all money received and expended by him during the year are properly accounted for and his books and records are entirely correct and we therefore compliment him for the neat and efficient manner in which he has kept the same. The financial statement follows:

Receipts.

Per capita tax	$27,152.30
Assessment	19,304.71
International Books	316.00
Charter fees	10.00
Miscellaneous	20.11
Total	$46,803.12

Disbursements.

A. F. of L. convention expense	$2,714.97
A. F. of L. per capita tax and assessment	4,787.50
Charter fees refunded	24.50
Contribution National Popular Government League	50.00
Defense of the Seamen's Act	10,113.95
Donation for organizing Iron and Steel Workers	300.00
I. S. U. of A. convention expense	2,402.65
Joint Organizing on the Great Lakes	4,072.25
Joint Organizing on the Pacific	70.00
Organizing Atlantic fishermen	864.00
Legislation	2,358.00
Organizing Great Lakes cooks	2,618.75
Printing, general	562.67
Printing, Call to Sea and Seamenship	2,192.55
Salaries	1,950.00
Stationery and office	1,574.51
Traveling, general	3,080.93
Traveling, re Peace Conference	1,000.00
Total	$40,737.23

Recapitulation.

Cash on hand November 26, 1917	$ 4,613.49
Total receipts	46,803.12
	$51,416.61
Total disbursements	$40,737.23
Cash on hand January 20, 1919	10,679.38
	$51,416.61

Your committee further reports that we sent a wire to the First National Bank, Chicago, Ill., regarding cash on hand and received the following reply:

"Chicago, Ill., January 21, 1919.

"W. H. Brown, Chairman,
Tremont Hotel,
Galveston, Texas.

"Replying telegram figures according to our books are $10,304.18.

(Signed) "FIRST NATIONAL BANK."

The balance of cash to make up the total we have seen in actual cash on hand by the Secretary-Treasurer.

Respectfully submitted.

WM. H. BROWN, Chairman;
D. E. GRANGE,
GEO. CUMMINGS,
MORRIS KRAIN,
HARRY GIDDY.

The report of the committee was adopted.

REPORT OF COMMITTEE ON RESOLUTIONS.

The Committe on Resolutions submitted the following report:

The International Seafarers' Federation.

Your committee has given careful consideration to the call received from Havelock Wilson and Andrew Furuseth for additional representation at the convention of the International Seafarers' Federation to be held in London, England, on February 24th.

Your committee is deeply impressed with the importance of such a convention and fully appreciates the potential influence which this gathering is likely to have with the delegates at the Peace Conference.

We have been informed that the International Seafarers' Federation was organized in Copenhagen during June of last year. Its membership consists of 70,000 British seamen and approximately 10,000 men comprising the membership of six seamen's unions in the Scandinavian countries. We understand that the Italian Seamen's Union with 10,000 members, and one or two of the other Seamen's Unions on the European continent are now ready to join the Federation. In any event, representation is expected from all the countries mentioned as well as from Holland, Belgium, France and Spain.

Havelock Wilson is the President of the Federation and C. Damm of Denmark is the Secretary on permanent salary.

The initiation fee in the Seafarers' Federation is 6 cents per member, which on the basis of our present membership of 50,000 would mean an initial payment of $3000.

There is no fixed annual contribution. The intention of the Federation's founders was to use the funds secured in initiation fee as the working capital and to make up the disbursement at the end of each year by a pro rata levy upon the affiliated membership.

In view of the fact that the future policy of

(Continued on Page 9.)

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Amazing Oil Profits.

The International Oil Worker publishes a review of recent profits in the oil industry in the mid-continent fields.

The Oil and Gas Journal, of Tulsa, Okla., is quoted as stating that the daily average production in these fields, November 1 last, was 452,800 barrels. At the price of 90 cents a barrel (the rate three years ago) this oil would have brought the producers $407,520 a day, $2,852,640 a week of seven days, $12,225,600 a month of thirty days and $148,743,800 a year of 365 days. At the present price of $2.25 a barrel the figures are, $1,918,800 a day, $7,831,600 a week, $30,564,000 a month, or $371,862,000 a year.

"History," it is stated, "can be searched in vain for a parallel to this great financial miracle worker. King Solomon's mines were a charity offering; the Klondike, a piker's dream; Cripple Creek, a widow's mite; Sindbad's fabled valley of diamonds, the wealth of the Indies or the wealth Aladdin's wonderful lamp brought to him, in comparison would represent a 10-cent side show to this great automatic money-making machine, the oil industry."

The International Oil Worker makes this comment on these profits:

"And there are many of us who remember the plaintive wails of some of the operators that they would be unable to continue operating if they had to grant the eight-hour day and the $4 minimum wage."

Cost of Living Jumps.

The National Industrial Conference Board, representing seventeen manufacturers' associations, reports that living costs for wage earners have increased 65 to 70 per cent. between July, 1914, and November, 1918.

This is a remarkable jump from last year, when the board placed the increase at 50 to 60 per cent.

Using the 70 per cent. increase as a basis, it would mean that a worker receiving $3 a day in 1914 would now have to be paid a wage of $5.10 a day to meet the figures of these employers, who can not be charged with making exaggerated statements regarding living costs for their workers.

The conference board quotes the United States Bureau of Labor statistics, which has shown that during the five-year period from November, 1913, to November, 1918, the price of lard, bacon, corn meal, flour, sugar and pork chops advanced 100 per cent. or more. No article of food for which prices were collected showed an increase of less than 50 per cent. for the five-year period.

Want Work in Cities.

In writing in the United States Employment Service Bulletin on the present Canadian labor situation, George W. Edwards says:

"The experience of Canadian officials in handling the placement of soldiers is indeed interesting in throwing light upon the psychology of returned men. It seems that the majority prefer employment in cities, even though this entails inside work. In explanation it is pointed out that army life is intensely gregarious, for the soldier is never without the company of his fellows. Hence many believe that the returned soldier will be absorbed not so much by the farm, where lonely existence might become unbearable, but rather by the factory, where the team work spirit is strong. Especially wil this apply to the young men."

Must Protect Rights.

As an answer to the anti-union policy of certain officials of the Postoffice Department, Frank Morrison, Secretary of the American Federation of Labor, has issued the following circular to State Federations of Labor and city central bodies:

"Attention is hereby called to an organizing campaign that is now being conducted by the Brotherhood of Electrical Workers on behalf of the telephone girls throughout the country. All State Federations of Labor, city central bodies and American Federation of Labor organizers are urged to support this movement to their fullest extent.

"This support should be given for two reasons—first, because it is our duty, as trade unionists, to extend every possible aid to fellow workers who would improve their conditions by collective action, and second, because instances are reported where postoffice officials have taken such action in the case of these telephone girls that is equivalent to a denial of the right to organize.

"The trade union movement should take this occasion to impress upon these officials—and all others—that the organized workers are as opposed to industrial kaiserism as they are to the military species that has been happily overthrown by the united efforts of our citizenship.

"Every chivalrous instinct in true Americans should respond to the appeal of these wage-working girls, that postoffice officials shall recognize a right accorded workers in other departments of the Government and which has been sustained by the President of the United States when he proclaimed the principles of the National War Labor Board.

"The denial of any right by a Government agency is a development whose first appearance is too often passed unnoticed.

"Trade unionists must be vigilant less their right to organize is encroached. To this end we call on organized labor to give these telephone girls every aid, to assist the Brotherhood of Electrical Workers wherever possible in the molding of a public opinion against the condition complained of, and strive by all lawful means to interest telephone girls in the trade union movement, its purpose and its value to the wage earners of our country."

Farmers Warn Senate.

In a resolution passed by the National Farmers' Conference the United States Senate is warned "not to attempt to imperil the President's plans for a league of

World's Workers

The cost of living is increasing all over the world. The workers in South America, South Africa, Australia and Europe are facing the same difficulties as the workers of the United States. Their wages will not buy the necessaries of life.

It is an interesting fact that on the third day after the Socialists took hold of the Government of Germany, night work and Sunday work was abolished in all bakeries and confectioneries throughout Germany. The abolition of night work has been a Socialist demand throughout the world, and the Socialists of Germany proceeded at once to put this part of their program into operation in various industries, notably the ones above mentioned.

Since the English Government has announced that it will take over the railroads there has been some talk about the probability of the workers' political rights being interfered with. This significant statement is printed in Reynolds' Newspaper: "So far as railway workers are concerned, they intend to prevent any interference with their political and citizen rights, but there is not much fear of any encroachment in this direction, in view of their strong trade union organization."

The Communal Federation of Workers of Goteborg has addressed a demand to the Swedish Government that a just distribution be made of the food supplies that are being imported into Sweden. The manifesto points out that the middlemen are making enormous profits, and that food is only within the reach of the wealthier classes. The limit of endurance has been reached by the workers, it states. The manifesto demands that all middlemen be eliminated. The workers of other communities are called upon to make similar demands.

The Central Federation of Labor of France has issued a reconstruction program which calls, among other things, for the constitution of a league of nations through the free co-operation of all the people for the abolition of economic protectionism and the doing away with an economic war after this war, for disarmament, for the establishment of an international bureau of transportation and repartition of raw material, for the internationalization of colonies, and for a program of no annexations, no punitive indemnities, and self-determination for all peoples.

The acute labor unrest which has been convulsing Argentina for months came to a climax on January 8th, when a general strike was declared throughout the republic. It resulted in a complete tie-up of all industries. Even the police, the firemen, the street-cleaners, and other municipal employes in Buenos Aires joined the strikers. The center of the disturbances was the Vasena Iron Works where some 20,000 men did picket duty. The Government finally broke the strike, after various street battles had taken place, on January 11th, by declaring martial law and appointing General Dellepaine as military dictator. In Congress, the Socialist deputies demanded an explanation of the Government's use of force in the strike. The session broke up in wild disorder, fist fights being one of the attendant circumstances.

Pacific Coast Marine.

The Oceanic Steamship Company's liner "Sonoma," which left Sydney January 23 for San Francisco, has put back to the Australian port with a damaged propeller.

Manager Harry Levinson of the Peterson Company is using some of the new equipment purchased at San Diego to compete for local towing.

The port of Portland has gone on record as opposing construction of the new dry dock authorized by the Public Dock Commission. The port takes the position that further dry dock facilities are not needed at this time.

The United States dredge "Chinook," which for several seasons past has been operated at the mouth of the Columbia River, has departed for Charleston, S. C., where she will carry on dredging operations at the harbor entrance.

Giving the wooden shipbuilding industry of Puget Sound and the Coast a big boost, Atlantic Coast shipping firms have chartered thirty-four wooden ships, products of the West Coast, according to an announcement by the Shipping Board.

The Alaska Packers Association will receive 84,000 yen from a Japanese concern for the remains of the "Star of Poland" which piled up on the Japan coast last autumn with a loss of ship and cargo. The Japanese company will salve what it can from the wreck.

The steamer "Princess Sophia," which foundered on Vanderbilt Reef, Lynn Canal, last October, with heavy loss of life, did not break in two as has been reported. She rests on an even keel. It is believed probable many more bodies will be recovered from the vessel.

The Crowley Company announced recently that a cut of not less than 20 per cent would be made in the rates now charged for local lighterage. The cheaper rate, which will bring the prices down nearly as low as the rates existing before the war, is made possible on account of the recent cut in the cost of ropes and other equipment used in the lighterage service.

With the largest cargo of flour ever taken from Puget Sound by a Sound-built steamer, the United States Shipping Board freighter "Ed Growbe" sailed from Seattle for Europe. Her cargo consisted of 9487 short tons, valued at $1,200,000. She is commanded by Lieutenant J. W. Baldwin, the youngest officer of the Navy to be entrusted with a big freight. He is 28 years old.

The steamship "Senator" is to be placed in the service between the United States and the Orient by the Pacific Steamship Company. The "Senator" will sail from Seattle February 25 and special arrangements have been made to take San Francisco passengers to the Sound on one of the company's coasters. A rate of $175 has been made for the voyage. Only first-class transportation will be sold.

Bound for isolated settlements in Western Alaska, where the sparse population is desperately in need of food, the power schooner "Bender Brothers" will sail from Seattle on February 10 with a full cargo of supplies. Reports reaching Seattle are that many of the settlements are in dire need of provisions and the "Bender Brothers" has been chartered to rush provisions to their relief.

The Matson Navigation Company's liner "Maui" has operated in the Government transport service as a troopship since the United States entered the war. It is rumored that the "Maui" may be released shortly, and is to be restored to the Matson service. The "Maui" is the biggest of the fleet, being 12,500 deadweight tons. A total of 3000 troops or casuals have been carried each voyage across the Atlantic.

A four-masted schooner, believed to be the "Helunea" of Callao, has been sighted by the Pacific Mail liner "City of Para" in equatorial latitude, according to a message from the San Diego radio station. The "Para's" aerogram read: "Passed on January 24, derelict four-masted schooner 'Helunea' of Callao, loaded with lumber, latitude 0 degrees, 5 minutes south and longitude 112 degrees 30 minutes west." Identification for the vessel was not certain, and further details are awaited.

The motorship "Alabama" has completed a voyage from San Francisco to Shanghai for the Overseas Shipping Company. The vessel encountered the same storm that razed portions of Hawaii and a terrific typhoon, but the full Diesel engines installed by McIntosh & Seymour never hesitated for a revolution and the craft went through without a scratch. Four of the forty-ton boilers of the steamer "Bear" were lashed on deck, but the lashings held fast. The performance of the "Alabama" is considered a remarkable test for a motorship.

Hardy British trawlers who manned the mine-sweeping fleet that kept the North Sea clear to German "eggs," are being recruited by the F. E. Booth Packing Company to man its fishing fleet and sweep the local banks for deepsea denizens, according to an announcement by the company. Recently the Booth Company placed an order in England for two steel trawling nets such as are used on the English coast and asked that Cornish fishermen be sent over to operate them. A cablegram was received by the company saying that three men of the English mine-sweeping fleet were leaving on the first available vessel, and were bringing the nets with them.

After a conference in San Francisco with representatives of the Navy and the Customs Service and Joseph Connelly, assistant to John W. Preston, Deputy United States Attorney-General, concerning the presence of enemy aliens on American ships, it was decided that Connelly shall notify shipowners and maritime labor organizations that enemy aliens are still barred from American vessels. The action followed the removal of Germans from several vessels in the harbor by Lieutenant-Commander Randall Rogers, head of the Navy Alien Enemy Inspection Detail, and their subsequent release from detention. Commander Rogers requested a definite ruling from Preston's office as to the future enforcement of the Espionage Act.

The advisory committee of shipping men, operators, exporters, importers and others interested in the harbor, which was appointed by President McCallum of the Board of State Harbor Commissioners to assist the Commissioners to handle the business of the port, is to be divided into a number of sub-committees for the purpose of facilitating the work that can be accomplished. McCallum said that the departments would cover the following subjects: Drayage and warehousing, wharves, stevedoring and mechanical equipment, foreign commerce, shipping, harbor extension and transportation. Each committee will specialize upon the subject assigned to it and the members chosen for each department will be picked on account of their knowledge of the questions involved.

Shipping men in San Diego are evincing keen interest in the disposition to be made of the fleet of eleven German sailing ships that have been interned at Santa Rosalia, Lower California, since August 4, 1914. The fleet includes seven ships owned by Knohr & Burchard of Hamburg and range from 1865 to 2334 tons. The other four were owned by the Flying P line of Hamburg and Kiel. Three of these, the "Steinbek," "Wandsbek" and "Goldbek," are reported to be in excellent condition, although all of the ships are badly fouled by marine growth. There are said to be a number of bills outstanding against the ships, and it is probable legal proceedings will be undertaken against the owners soon after the conclusion of the Peace Conference, when the ownership of the fleet of sailing vessels will be definitely established. The crews of the ships deserted soon after their internment.

The Shipping Board wooden steamer "Quoque," which arrived at Balboa recently, propelled by steam generated from only one of the two boilers, has been fully repaired and is now on the Atlantic. The damage detained the vessel only three weeks. The quick repair feat was possible because within two days of the receipt of the report of the injury to the boiler, at San Francisco, Captain Pillsbury had a duplicate boiler on the way to Balboa. One of the regulation stock boilers intended for another ship was sent and filled in nicely. According to officials of the Shipping Board the boiler, which is one of the Heine safety type—a modification of the original Heine equipment as designed by the engineers of the Emergency Fleet Corporation and the Heine concern—was burned out, owing to carelessness. The officers on the bridge noticed that the speed of the vessel was cutting down and ordered more steam. This was attempted by shoveling in more coal, and the terrific heat melted the water tubes. The Government maintains a first-class ship repair plant at Balboa, and when the "Quoque" arrived there one of the electric cranes picked up the 17½-ton boiler and replaced it with the new one. Officials of the Shipping Board here say that good work is done at the canal terminal and the cost is less than here. The natives do the heavy work and capable American engineers boss the job.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 Six months - - - $1.00
Advertising Rates on Application.

Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, FEBRUARY 5, 1919.

THE AFTERMATH.

Not so very long ago the mouth-patriots of our own beloved Republic never failed to explode when someone merely referred to the problems which all knew were bound to come with the end of the war.

No real patriot was supposed to have time for anything except for the immediate task of winning the war. Several of the most distinguished American labor leaders displayed particular talent and energy in suppressing every sane discussion of after-war problems.

Well, we all know that the war ended rather suddenly and that demobilization problems were upon us much sooner than anticipated. A regular deluge of reconstruction programs followed. Nearly every Central Labor Council, every State Federation of Labor, and societies, clubs, associations too numerous to mention, evolved their own pet reconstruction schemes. The American Federation of Labor Committee on Reconstruction has just followed the general procession by making public a lengthy and scholarly treatise dealing with every phase of the general subject of demobilization and reconstruction.

In the meantime, our sailors and soldiers are being discharged quite rapidly; a more or less aggravated unemployment problem is already with us; yet, judging by the events of the past, the splendid declarations and proposals contained in the A. F. of L. program will remain just where they are now—on paper!

An earlier start would doubtless have facilitated matters, but it is useless to talk about that now.

The formation of an American Labor party, a party with an ideal and a vision, organized separate and apart from the existing economic organizations of the workers, is being urged in several of the industrial centers of the East. It is, in fact, not only urged but has "caught on" to an unheard-of degree. To be sure, Gompers and the old-line leaders are against it. Mr. Gompers has done his best to stop the political labor party movement in its infancy, but apparently without success.

In New York, Illinois, and elsewhere the movement to organize the workers politically is progressing despite the vigorous advice of old-line trade-union leaders to shun the new movement and stick to the established A. F. of L. method which has secured legislative demands regardless of partisan politics.

Of course, no one can dispute the fact that the A. F. of L. policy has brought tangible results. But times and conditions have changed. America and all the world are confronted by problems that tend to jar the most complacent mind. The two old political parties of our country can not or will not make the workers' problems their own. Both are emphatic in denying the existence of any "class," yet a class-conscious Supreme Court quietly but effectively continues to administer chloroform to most of the legislative achievements for which organized labor has claimed credit.

What shall the answer be? Shall it be meek submission and the same old trailing behind the gaudy band-wagons of old political parties? Or shall it be a clear-cut economic and political demand, and the creation of a new political machine, striving for that new order of things?

Evidently a great many American trade-unionists are inclined to make a try for the latter. And the New York Labor party platform, summarized herewith, is typical of the general trend of demands:

The restoration of the fundamental political rights of free speech, press, and assemblage; the furnishing of employment to soldiers and war-workers, with extension of public works for that purpose; the permanent public ownership of such public utilities as railways, telegraphs, telephones, mines, stockyards, grain-elevators, irrigation dams and water-power plants, and unused lands; the reduction of the cost of living, by co-operation and the elimination of the middleman and the profiteer; democratic control of industry and commerce; democratic control of education; enforcement of the American standard of living by establishing a standard wage based on the cost of supporting a family of five, by establishing a working week of forty-four and a working day of eight hours, by recognition of the unions, by providing social insurance, and by enacting uniform laws protecting women and child labor; complete equality of men and women in government and industry; a curb on the power of the Supreme Court to declare laws unconstitutional; opposition to any form of prohibition curtailing personal liberty; representation of labor in all government departments and all commissions and agencies of reconstruction; a referendum vote before a declaration of war; no compulsory military training; increased taxes on incomes, inheritances, profits, unearned increments, and land values.

These demands may not include every wish and every hope voiced by the more radical spirits, but it is far ahead of anything presented by the old parties. Moreover, as a whole, it is worth fighting for by the countless men and women who are practical enough to realize the impossibility of establishing paradise on earth, but who none the less cherish an ideal and vision for a greater and better world than any of us have heretofore known.

Last week's issue of the JOURNAL contained a résumé of the President's and Secretary's reports to the Galveston convention of the International Seamen's Union of America. In this issue is the first half of a liberal synopsis of the convention proceedings. Next week's issue will have the second half, together with an editorial review of the convention's work. Members everywhere should make it a point to read the transactions of their convention. A well-informed membership is as great an asset to a Union's stability and future welfare as is a well-filled treasury.

OUR WOODEN SHIPS.

Nearly a year ago the JOURNAL uttered a warning against the dilution of our new merchant marine by the addition to it of a lot of jerry-built wooden ships.

That the warning was to some extent heeded is evidenced by the fact that though the Shipping Board originally contemplated building some eight hundred of these vessels, only about ninety were ever completed. Even at that, what to do with these "lame ducks" now looms up quite a problem for the Shipping Board. They represent too much recently invested capital to be consigned to the boneyard, where all good old hookers are sent when their earning days are over. On the other hand, with ocean freights receding to pre-war figures, they can only be run at a loss.

The faults of construction, only too apparent in this class of ships, were perhaps largely unavoidable under the circumstances. The emergency that made it necessary to build them was great. Yet even so, the old saw, "The more haste the worse speed," amounts to a rule that seems to admit of no exception.

But leaving out the item of faulty construction, there still remain several objections to the wooden ships of emergency build. First, their carrying capacity is too small. Too much space must be given up to coal when they are chartered for long voyages. This of course reduces correspondingly the space allotted for cargo.

Second, they lack speed. Few of them, if any, will average more than ten knots an hour on overseas runs. The hulls of these jerry-built ships will not stand the racking and vibrations of powerful engines such as are installed on steel ships of equal tonnage. No wooden ship will, no matter how well built she may be.

Third, their frames and planking having been cut from green timbers, they leak overmuch. This limits their sphere of usefulness to the carrying of only such cargoes as will not be damaged by salt water. In short, they don't pay; a fatal defect in a ship if ever there was one.

To be sure, suggestions for making them pay are not lacking. One Shipping Board official is quoted as having worked out a plan for converting the "lame ducks" into sailing ships for the lumber carrying trade. All that is required, according to him, to make of these vessels first-class lumber droghers is to take out the engines, cut away the present decks and build others lower down so that deckloads could be carried, and widen the hatches. It's a fine scheme no doubt; but those who ought to know claim that the cost of conversion would be prohibitive.

It has also been proposed to cut down the hulls and rebuild them into barges. Another plan is to install Diesel engines in place of the present engines, and thus increase the cargo space.

But every proposition submitted so far resolves itself finally into a case of throwing good money after bad. Far better then to take the money and add enough to it to build an A1 at Lloyd's ship that, like "a thing of beauty," would be "a joy forever" to her owner.

What then should be done with those "lame duck" wooden ships? Well, our own idea is that the Shipping Board should auction them off to the highest bidder while the auctioning is still good. Even if the Government cleared

only fifty cents on the dollar through the deal, it would assuredly be a blamed sight better bargain than running the ships at a loss for years, and then have to scrap 'em after all.

"OLD STUFF."

We have carefully scanned every line of Captain Robert Dollar's article on "The American Merchant Marine After the War," in the hope of finding some new, and mayhap helpful, argument against the Seamen's Act. Helpful criticism is always welcomed by the JOURNAL, especially helpful criticism of the Seamen's Act, because we realize keenly that it is not a perfect instrument. Its opponents took good care that it shouldn't be so any more than they could help.

But our scanning was all in vain. What we found was the same "old stuff" that the choleric old gentleman has been regularly getting off his chest every once in so often ever since the Seamen's Law was enacted—aye, and for several years before that auspicious event took place.

And Lord! How the doughty Captain can raise the temperature of the circumambient ether when the Seamen's Law runs athwart his hawse! Compared with his picturesque performances in that line, cursing by bell, book, and candle was a rather tame affair. The truth seems to be that contemplation of the Seamen's Law affects the venerable gentleman much the same as the sight of a red rag affects a bull. At that we hasten to assure both the Captain and the bull that no invidious comparison is meant.

We don't know whether it is colossal nerve, or that bland, child-like artlessness said to be acquired by white persons from long and intimate association with the sons of the Flowery Kingdom. But for sheer audacity Captain Dollar's proposed scheme for the sale by the Government of its ships to private individuals has every other scheme of the kind lashed to the mast, backed off the boards and, in general, beaten fifty-seven different ways from the jack. If there is anything to compare with it, it must be the Captain's further proposition that the Government pay to American shipowners the difference between American seamen's wages and Chinese seamen's wages. There sure must have been some audible gasping for breath when these two propositions were first sprung upon the unsuspecting gentlemen composing the United States Shipping Board.

However, that part of the proceedings is the Government's funeral. What the JOURNAL is chiefly concerned about is the all too evident determination of Captain Dollar and his friends to bring back the old slavery conditions which the Seamen's Act freed American seamen from. It seems a strange way to thus reward the services of men who braved the U-boats and the other dangers of the sea during the war that the property of Captain Dollar and other shipowners might be safe. But, 'twas thus.

"When the devil was sick the devil a saint would be;
When the devil got well the devil a saint was he."

While the war was on American seamen were "heroes." Now that the war is over they are going to have the shackles riveted on to them again. The introduction in Congress of the Calder and Gould bills at the same time that "The American Merchant Marine After the War" appeared in print was no mere coincidence.

DILLON vs. "STRATHEARN" CASE

Supreme Court Dismisses Certificate From Circuit Court of Appeals on a Technicality.

SUPREME COURT OF THE UNITED STATES.

No. 361.—October Term, 1918.

John Dillon vs. Strathearn Steamship Company, Claimant of Steamship "Strathearn."

On a Certificate from the United States Circuit Court of Appeals for the Fifth Circuit. December 23, 1918.

Mr. Justice Day delivered the opinion of the court.

John Dillon, a British subject, filed a libel in admiralty in the United States District Court for the Northern District of Florida in which he claimed the sum of $125.00 alleged to be due him for wages as a carpenter on the steamship "Strathearn." The District Court dismissed the libel (239 Fed., 583). An appeal was taken to the Circuit Court of Appeals for the Fifth Circuit. The libel was filed under the provisions of section four of the Seaman's Act of 1915, 38 Stat., 1165, 1168.*

The Circuit Court of Appeals certifies two questions to this court:

First. Is Section 4530 of the Revised Statutes of the United States, as the same was amended by Section 4 of the act of Congress, approved March 4, 1915, entitled "An Act to promote the welfare of American seamen in the merchant marine of the United States; to abolish arrest and imprisonment as a penalty for desertion and to secure the abrogation of treaty provisions in relation thereto; and to promote safety at sea," violative of the Constitution of the United States?

Second. Is Section 4530 of the Revised Statutes of the United States, as the same was amended by the last mentioned act of Congress approved March 4, 1915, violative of the Constitution of the United States in so far as it provides "That this section shall apply to seamen on foreign vessels while in harbors of the United States. and the courts of the United States shall be open to such seamen for its enforcement?"

The certificate is made under Section 239 of the Judicial Code which makes provision for the certification of questions of law to this court from a Circuit Court of Appeals. The section provides that this court may give instruction on the questions certified, or it may order the whole record sent up for consideration and decision. Rule 37 of this court provides that in such cases the certificate shall contain a proper statement of the facts on which the questions of law arise. The certificate in this case fails to comply with this rule of court. It contains a partial statement of Dillon's contract with the ship. It states that no part of the sum sued for was due under the shipping articles signed by Dillon. It does not state the terms of payment agreed upon, when or where payments were to be made under the contract, or what advancements, if any, were to be made during the voyage. The certificate concludes: "For information as to the facts of the case copies of the transcripts and briefs are herewith transmitted." Counsel argue the case by reference to the transcript of the record in the Circuit Court of Appeals, and it is apparent that a proper consideration of the case requires such reference. This transcript is no part of our record. This court alone has authority to have it sent up. The briefs in the Circuit Court of Appeals are no part of the record here. The certificate is required to state the pertinent facts in order that this court may answer the questions of law certified with reference to such facts, and not by searching the records and briefs of the Circuit Court of Appeals itself.

The certificate therefore fails to comply with our rule, and in accordance with the established practice must be dismissed. Cincinnati, Hamilton & Dayton R. R. Co. vs. McKeen, 149 U. S., 259, 261; Stratton's Independence vs. Howbert, 231 U. S., 399, 422 and cases cited. Dismissed.

A true copy.

Test:

Clerk Supreme Court, U. S.

* "Sec. 4. That section forty-five hundred and thirty of the Revised Statutes of the United States be, and is hereby, amended to read as follows:

"'Sec. 4530. Every seaman on a vessel of the United States shall be entitled to receive on demand from the master of the vessel to which he belongs one-half part of the wages which he shall have then earned at every port where such vessel, after the voyage has been commenced, shall load or deliver cargo before the voyage is ended and all stipulations in the contract to the contrary shall be void: Provided, Such a demand shall not be made before the expiration of, nor oftener than once in five days. Any failure on the part of the master to comply with this demand shall release the seaman from his contract and he shall be entitled to full payment of wages earned. And when the voyage is ended every such seaman shall be entitled to the remainder of the wages which shall then be due him, as provided in section forty-five hundred and twenty-nine of the Revised Statutes: . . . And provided further, That this section shall apply to seamen on foreign vessels while in harbors of the United States, and the courts of the United States shall be open to such seamen for its enforcement.'"

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Feb. 3, 1919.
Regular weekly meeting came to order at 7 p. m., E. A. Erickson presiding. Secretary reported shipping medium.

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., Jan. 27, 1919.
No meeting; shipping slow; members scarce.

J. ETCHELLS, Agent.

Room 11, de Cosmos Block, 1424 Government Street.

Vancouver, B. C., Jan. 27, 1919.
Shipping slack.

W. G. MILLARD, Agent.

58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, Jan. 27, 1919.
No meeting. Shipping and prospects medium.

H. L. PETTERSON, Agent.

2016 North 30th St. Tel. Main 808.

Seattle Agency, Jan. 27, 1919.
Shipping dull.

P. B. GILL, Agent.

San Pedro Agency, Jan. 22, 1919.
Shipping slow.

JOE MACK, Agent.

P. O. Box 54. Phone Home 115; Sunset 66W.

DIED.

Robert Campbell, No. 741, a native of Nova Scotia, age 45. Died at San Francisco, Cal., Jan. 30, 1919.

Charles L. Carlsen, No. 1834, a native of Sweden, age 59. Died at Eureka, Cal., Jan. 1, 1919.

Anders J. Petterson, No. 235, a native of Sweden, age 76. Drowned from schooner "Samar," October, 1918.

W. Quickman, No. 31, a native of Germany, age 41. Died at Port Angeles, Wash., Dec. 9, 1918.

The San Francisco division of operations of the Shipping Board, through Attorney A. T. Wright, has announced that the Board will pay for the damage done to the bulkhead flooring in front of pier 46 and also the section affected by the vegetable oil from the "Muscoota" between piers 44 and 46. In discharging the cocoanut oil from the ship which berthed at the bulkhead, the grease soaked into the wooden floor and caused the stevedores and others to involuntarily slide in all directions. The Harbor Board, fearing that the fire hazard had been increased, then suggested that a new covering is to be desired. The suggestion from Chief Engineer White was sufficient and the work will be done by the Government.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Thanks to the dictatorial and reactionary attitude of Postmaster Burleson toward the industrial rights of employes in the wire service, Congress is about to repudiate both public ownership and public control of telephones and telegraphs. Hearings before the House committee on post offices and post roads, upon Burleson's bill for public ownership and upon various bills providing for a decent wage for postal employes, have resulted in test votes which show that the committee is overwhelmingly opposed to giving Burleson any more power for mischief. If Burleson had been the most ardent opponent of public ownership in America, he could not have done that cause more damage than by following just the course he has pursued. As he is rated a clever politician, there are many labor men who believe that he knew in this case just what he was doing.

On the railroads, industrial relations have been quite the reverse of those existing in the postal service and the Burlesonized wire service. John Scott, secretary of the Railway Department of the American Federation of Labor, told me that, thus far, the referendum vote upon the policy to be pursued toward the railroads by the Government showed a unanimous support of McAdoo's plan for five more years of the existing governmental control. About the first of February the Railway Department of the Federation will hold a conference with the executives of the four brotherhoods of the train crews, and try to secure a common program. The heads of the four brotherhoods have been waiting for a chance to present to the Senate Committee on Interstate Commerce, a definite plan for the future operation of the railroad properties.

Most of the railroad workers' organizations take the position that government ownership and operation is beneficial or dangerous just in proportion to the amount of participation by the unions in the making of the policy of management. If the unions get a fair representation in the government of the industry there will be no "public be damned" policy, and hence the public will be glad to see that the financial end of the business is fairly adjusted. Nobody will object to good wages when service is good, and when the unions co-operate in making the policy the service will be good. As the workers march toward co-operative control of railroading, the spirit of the industry will approach that of the great co-operative enterprises abroad.

When President Wilson returns from the peace conference next month, cheered by the great working masses of Europe for his decision that Russia's revolution must be recognized, he may bring with him some new ideas for dealing with the labor situation here. He is expected to renew his appeal to Congress to prolong the control of the railroads, and there are high hopes at the headquarters of the A. F. of L. that he will find a way to get rid of the Postmaster-General, in order that Government ownership and operation may be given a genuine tryout under peace conditions.

In a letter to all members of the House and Senate, President S. J. Konenkamp of the Commercial Telegraphers' Union of America says:

"The organized commercial telegraphers of the United States are bitterly protesting against their treatment by the U. S. Telegraph and Telephone Administration. . . . . Mr. Burleson has not kept his word. He promised reinstatement for all locked out workers and this promise has not been kept. He ordered the telegraph and telephone companies to cease discrimination against union workers, but has not enforced these orders where they would benefit the workers. . . . The employers who defied the Government during the war are among Mr. Burleson's closest advisers.

"We are contending for reinstatement for our fellow workers, a decent wage, proper working conditions, the stoppage of discrimination and the principle of collective bargaining. The American Federation of Labor reconstruction program offers the solution of some of our problems and a solution to the rest must be found. Furthermore, something must be done to induce Mr. Burleson to keep his word."

In a circular to the union membership, Konencamp advises:

"Keep one eye on the peace conference. Keep the other on the industrial bourbons in the United States. Labor is going to be made free. It must be made free or nothing can stop bolshevism from spreading throughout the world.

"The commercial telegraphers of the United States have suffered enough. We must have a square deal now, and we are going to get it before this year ends."

If Konenkamp doesn't watch out, he will find Archibald Stevenson, detective for the Military Intelligence Service, on his trail. Archie, whose law firm has offices at 20 Nassau street, in the financial district of New York City, has secured a list of dangerous radicals in the United States, with special attention given to university professors who teach economics, history or sociology. He has promised to furnish it to Senators Nelson of Minnesota and Overman of North Carolina, who are a committee investigating "German propaganda." Archie and his assistant, who was formerly a stock broker, seem to be anxious to remain in Government jobs.

Archibald told solemnly that "Yucatan and adjoining regions" are "under Bolshevik rule", and that a complete "Soviet government" has been established there. The Pan-American Federation of Labor, started three years ago, or more than a year before the fall of the Russian czar and almost two years before the rise of the Bolsheviki in Russia, was largely made possible by the fact that Yucatan had a radical governor—General Alvarado—whose radical administration is now suddenly discovered by this "expert."

In the same absurd way the lawyer-detective told how Frank P. Walsh wrote a note introducing two boys belonging to the I. W. W. to the Civil Liberties Bureau in New York, and how George P. West of The Public and John Fitch of The Survey, and Helen Keller, the blind author, were among the signers of an advertisement published in The New Republic, asking for funds with which to give the I. W. W.s fair defense in their trial at Chicago. The two Senators looked very grave at this evidence that a fair defense was demanded.

Senator Nelson will be remembered for his long opposition to the Seaman's bill, and Overman for his fight against the Child Labor bill. They are now anxious to hunt down all "radicalism." When Stevenson paused between statements regarding the awful spread of dangerous economic ideas in America, Overman would ask, "And they all use the red flag, don't they?"

Senator Kenyon of Iowa has tried to secure attention in Congress for his bill providing an emergency appropriation of $100,000,000 to take care of the unemployment problem this winter. Legislative Agent Sterling of the A. F. of L. is working upon House and Senate members to make them realize the seriousness of the danger from unemployment on the one hand and the high cost of food and clothing upon the other. How difficult his task is, may be indicated by the fact that not even the small salary increase of $20 a month for the Government clerks in the District of Columbia is certain to be passed. It is wholly unlikely that anything will be done before the close of this Congress on March 3 to either reduce the cost of living or to establish a reasonable wage in Government employment generally.

Many unions have looked to the National War Labor Board, and some have turned their eyes toward the War Labor Policies Board, in hope of a constructive plan from those sources. But the War Labor Board is now worse than dead—it is being used by the five employer members to raise false hopes and to hand out promises to discontented workers that are wholly unlikely to be kept. And the chairman of the War Labor Policies Board, Dr. Frankfurter, has abandoned his scheme of a "stabilized wage," to go to New York and arbitrate a strike in the garment trades. Incidentally it is worth noting that the Amalgamated Clothing Workers—who are outside the A. F. of L.—have just won their strike for the 44-hour week for 55,000 members engaged in the making of men's and boys' clothing.

The National War Labor Board must have some kind of successor. It seems only a modest proposal that its successor should be created by law, and that the successor should be an industrial court in which all cases submitted jointly by employers and workers should be definitely decided. Organized Labor should form one-third of this court, and the Department of Labor should furnish the controlling third. Its first duty should be to determine and proclaim a national minimum—of wages, of hours of rest, of sanitary and safety conditions, and of participation by labor in the management of the industry. Individual awards could follow that job. In cases submitted by one side awards could not be legally enforced, but the award and the facts justifying it could be given full publicity by the court.

The present Congress will not consider anything of this sort, any more than it will seriously consider the unemployment situation.

President Johnston of the International Association of Machinists is trying to secure co-operation among members of the cabinet to start a program of public work for the unemployed. He made a similar effort before President Wilson sailed for France, but without success. He sees no immediate prospect of the Government doing anything to check the dangerous trend of the days toward trouble due to lack of work and

lack of the price of meals. At Bethlehem, for example, great numbers of men have been discharged and are feeling that they have been robbed as well, since the higher pay awarded them by the War Labor Board for nearly a year past is still held up by the company.

In sharp contrast to the condition of the dismissed employees at Bethlehem is the luxurious dignity of Thomas F. Logan, ultra-patriot social lobbyist here, who has testified before a Senate committee that he draws $8,400 from the Atlantic Refining Co., owned by Standard Oil; another $6,000 a year from Standard Oil Co. of Indiana; also $6,000 from the Freeport Sulphur Co., for whom he wrote shop posters "To stimulate the workers, during the war, to greater effort," also $6,000 from the General Electric Co.; also $6,000 from Swift & Co.; also $500 a month, at times, from the Standard Oil Co. of New Jersey. He was a close associate and adviser of Chairman Hurley of the Shipping Board, and he entertained lavishly with dinners, balls and theater parties for officials of the Food and Fuel Administrations, members of the House and Senate, and the Secretary to the President, Generals and admirals, too.

A DAILY DUTY.

Each day every American soldier in France is confronted by a great duty. Our Army there has a great task to perform for our country, for the world, for civilization, and for humanity. Our soldiers are doing their duty with a courage and fidelity and efficiency that thrill every heart.

Each day every American citizen at home is confronted by a great duty, a duty as imperative upon him or her as the duty of our soldiers is upon them. The American people have a great task to perform. It is to support to the limit of their ability our Army, our Navy, our country at war.

To work with increased energy and efficiency so that our national production may be increased; to economize in consumption so that more material and labor and transportation may be left free for the uses of the government; and with the resultant savings to support the Government financially is the daily duty of every American. It is a duty that will be met by every American whose heart is with our sailors in submarine and mine-infested waters and with our soldiers in France, who glories in their courage and fighting ability and their success.

Conciliation and arbitration are, of course, well worth seeking. In the present imperfect state of industrial morals, however, it is apparent that the hope of attaining these ends lies chiefly in the power of either or both parties to fall back upon the sterner alternative.

We have a great deal of sympathy but very little respect for the order of intellect that can see no difference between the compulsion of a court and the compulsion of a trade union in the regulation of the employe's relations with the employer.

A working day that leaves no interval between work and sleep would reduce man to the state of the animal—that is, the draught animal.

THE I. S. U. OF A. CONVENTION.

(Continued from Page 2.)

the European seamen will be largely determined at the forthcoming London conference, your committee is of the opinion that the International Seamen's Union should be represented with voice and vote. We therefore recommend:

First—That the Secretary be directed to apply for affiliation and remit the necessary amount required in initiation fee for the membership of the International Seamen's Union of America.

Second—That this convention confirm the selection of Comrade Furuseth by the Executive Board and elect one additional delegate for the International Seafarers' Convention at London.

The recommendation of the committee pertaining to affiliation with the International Seafarers Federation was adopted unanimously.

An amendment was offered to the committee's second recommendation to the effect that three additional delegates be sent to the International Seafarers' Conference at London.

Upon roll call the amendment providing for three additional delegates was defeated, as follows:

For the Amendment—G. H. Brown, W. H. Brown, W. L. Cartledge, John Clausen, Thos. Conway, J. W. Ellison, Harry Giddy, H. P. Griffin, I. N. Hylen, James Lynch, J. H. Meagher, J. M. Secord, Newman Shea. 155 votes.

Against the Amendment—Oscar Carlson, John Clark, George Cummings, Patrick Flynn, D. E. Grange, T. A. Hanson, C. J. Harrington, Dan Ingraham, Morris Krain, C. G. Larsen, C. F. May, Peter McKillop, Chas. Munnich, L. J. Norkgauer, P. O'Brien, John Olson, P. J. Pryor, Jack Rosen, Paul Scharrenberg, Charles Sullivan, J. V. Thompson. 261 votes.

The recommendation of the committee for one additional delegate was then adopted by the convention.

General Publicity.

The committee then reported upon the following resolution, as submitted by delegates from the Marine Firemen's, Oilers and Watertenders' Union of the Atlantic and Gulf:

Whereas, It is recognized that the near future is one of the most critical periods in our history confronting us, and

Whereas, We must at all times be on the alert and vigilant to watch every effort that will be made to destroy our freedom as seamen, therefore, be it

Resolved, By the International Seamen's Union in convention assembled that a widespead publicity be given to our cause by propaganda through the newspapers, and articles thereto be inserted by the various representatives of the different affiliated unions.

Your committee recommends approval of the suggestions contained in the foregoing resolution and as one means to the end favors a more liberal distribution of our official Journal, not only among our own membership but also to representatives of the press and others who need information and education upon the aims and purposes of the Seamen's Act and the Seamen's movement generally.

In elaboration of a more detailed scheme of educational publicity, as suggested by Attorney Axtell and others, your committee recommends the adoption of the following resolution:

Whereas, The growth and development of the American Merchant Marine prior to the Civil War was without parallel in the history of commerce, our national maritime spirit was equal to every demand, American ships and American seamen were known in every port of the world, the United States was the mistress of the seas, manning her peerless clipper ships with her own sons and carrying more than 90 per cent. of all national exports and imports in her own bottoms; and

Whereas, As the result of the Civil War, the change from wood to iron and our unpreparedness for that change either economically or politically, our country's proud merchant marine in a short period shrunk to only a shadow of her former self; and

Whereas, The events of the past few years have clearly proved that when national necessity sounded the clarion call to the sea, our country, notwithstanding fifty dormant years, still had the necessary maritime genius and an abundance of the natural resources to found and maintain a great merchant marine; and

Whereas, History is emphatic in her teachings that no nation can ever hope to retain and successfully operate a great merchant marine without a virile national maritime spirit back of it, because a native seafaring population to man the ships has ever been as essential to national welfare as the ownership of vessels, for in the final analysis sea power is in the seamen; and

Whereas, The history of American seamanship is a glowing record of patriotism, courage and achievement unsurpassed by any people, anywhere, no other calling demands a higher mental and physical standard in the men employed, none has given better service to civilization and to humanity, no occupation has a right to higher consideration or greater honor, for none has given more important service in peace and war; therefore, be it

Resolved, By the International Seamen's Union of America, in annual convention assembled at Galveston, Texas, January 24, 1919, that we respectfully urge upon each State Board of Education to so arrange for special courses in history, geography and pertinent economic studies so as to instill in the minds of our young men the conviction that the destiny of the United States is inseparable from the sea; also to create the basis for a thorough nautical education, to awaken an interest in the economic problems affecting shipping and in spirit a genuine appreciation of America's unlimited opportunities upon the seven seas; further

Resolved, That the attention of all educational institutions in America is hereby earnestly directed to the valuable and instructive literature upon the Seamen's Act and maritime legislation generally, which has been and is being issued from time to time by the International Seamen's Union of America, and that such literature may be had upon application; further

Resolved, That a copy of these resolutions be sent to the Governor of each State with the request that he transmit same to the President of the State Board of Education and to the State Superintendent of Public Schools for consideration of and action.

The resolution, as submitted by the committee was adopted unanimously.

Health Insurance Endorsed.

The following resolution, submitted by the delegates from the Sailors' Union of the Pacific, was read and upon favorable report adopted:

Whereas, The marine hospital fund established by Congress in 1798 to provide medical care for sick and disabled seamen is insufficient for modern needs and requirements;

Whereas, Universal workmen's health insurance is the accepted scientific method of providing such care and necessary financial relief for sick wage earners and their families, and has been successfully adopted by ten leading European countries; therefore, be it

Resolved, By the International Seamen's Union of America in Twenty-second Annual Convention assembled at Galveston, Texas, that we urge the adoption in America of the en-

(Continued on Page 10.)

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.
2. Free schools, free text books and compulsory education.
3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.
4. A work day of not more than eight hours in the twenty-four hour day.
5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.
6. Release from employment one day in seven.
7. The abolition of the contract system on public work.
8. The municipal ownership of public utilities.
9. The abolition of the sweat-shop system.
10. Sanitary inspection of factory, workshop, mine and home.
11. Liability of employers for injury to body or loss of life.
12. The nationalization of telegraph and telephone.
13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.
14. Woman suffrage co-equal with man-suffrage.
15. Suitable and plentiful playgrounds for children in all cities.
16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.
17. Continued agitation for the public bath system in all cities.
18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.
19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

nations." The conference represents millions of organized farmers. The resolutions, which were cabled to the President, state that "he (the President) has encountered through his espousal of the common people's purpose the hatred and opposition of the jingoes, profiteers and imperialists of all countries."

Then follows the warning to the Senate not to imperil the plan, "because the peoples of the world, not the governments, have won this war, and they will not be cheated of the fruits of their victory."

Grant 8-Hour Day.

Acting as umpire for the National War Labor Board, Julian W. Mack has ordered three large plants in Warren, Ohio, to establish the eight-hour day for their molders and apprentices, with the same wages paid for nine hours.

"It is to be noted," says the umpire, "that at the hearings the employes expressly stated their desire for the straight, not the basic, eight-hour day."

The workers originally asked for increased wages for a nine-hour day, but later changed this to an eight-hour day. The employers insisted that some of the workers voted for the change without understanding the situation, and to this claim, the umpire replied:

"I would feel impelled to concur in the result unless I were clearly satisfied that it was entirely unreasonable or illegal."

Wire "Union" Dissolves.

The Atlanta local of President Carlton's "union" of Western Union telegraphers has dissolved and the members have joined the bona fide Commercial Telegraphers' union en bloc.

At a meeting of the regular union the president of the defunct Western Union Employes' Association said:

"The men and women who joined the Western Union Employes' Association did so because they accepted at face value the assurance of the company and the men at the head of the organization that much good would be accomplished.

"We were a little slow in recognizing the fact that the association was organized for no other purpose than to defeat the regular union, but having at last the facts forced upon us, we are here to cast our lot with you, who we were deceived into fighting.

"The accomplishments of the association have been nil and no reforms have been obtained for the workers except those forced from the companies by the fear of the Commercial Telegraphers' Union.

"We have decided that if the Commercial Telegraphers' Union can accomplish as much as it has with a limited membership, much more can be obtained if all of us put our shoulders to the wheel in the organization recognized by the A. F. of L."

Tar Gang Fear Probe.

The Detroit Free Press says prominent business men in Jackson, Mich., fear the result of a probe in the outrage on Herbert Crawford, representative of the Machinists' union, who was tarred and feathered by a mob.

William Faupel of the State constabulary is the only man who has been arrested in connection with the case and the Free Press intimates that prominent citizens of Jackson are uneasy because the trial may show that anti-union business men were connected with the outrage and that they masked their outlawry behind the American flag.

"Incidentally," says the Free Press, "the effort to discourage the organization of the machinists in Jackson defeated itself by the Prussian tactics employed. Prior to the feather party the men were not responding at all readily to the organizing effort. After the feather party became known, the men's sympathies blazed up and in a few weeks the machinists were strongly organized."

Scores Law's Delay.

In an address to the Milwaukee Bar Association, Chief Justice Winslow of the State Supreme Court said "that every time a lawyer tries to put something over the court" and every time a court helps to delay justice, an argument is placed in the hands of those who oppose our present form of government.

"There is no question," said the chief justice, "but that many things in our social order ought to be changed and there is no question but that modern society, government, politics and the people who are in control have got to clean house."

THE I. S. U. OF A. CONVENTION.

(Continued from Page 9.)

lightened principle of universal health insurance; further

Resolved, That we demand the inclusion in laws of this subject of full medical care and a percentage of wages during temporary sickness, democratic administration of funds by those directly concerned, and that private insurance companies operating for profit be barred from the opportunity to traffic in the needs of sick workingmen.

Organizing Trap Fishermen.

The committee reported favorably on the following resolution introduced by Delegate Thompson of the Alaska Fishermen's Union:

Whereas, The International Union of Pile Drivers, Bridge and Structural Iron Workers are pursuing an aggressive organizing campaign around Puget Sound and vicinity of Southeastern Alaska, and

Whereas, Several unions of trap fishermen have been taken under the jurisdiction of said Pile Drivers, which constitutes an intrusion upon the jurisdiction of the Alaska Fishermen's Union, and

Whereas, The Alaska Fishermen's Union has never relinquished the right to jurisdiction in these waters, or in any part of the fishing industry; therefore, be it

Resolved, By the International Seamen's Union in convention assembled that we protest this intrusion upon the Alaska Fishermen's Union, and be it further

Resolved, That the Executive Board take such steps as may be deemed necessary to safeguard the interests of the Alaska Fishermen's Union.

The resolution was adopted by the convention.

Transfer to British Union.

The following resolution was submitted by the delegates from the Marine Firemen, Oilers and Watertenders' Union of the Atlantic and Gulf:

Whereas, Resolution No. 11 introduced at the Buffalo convention in 1917 was referred to the Executive Board for investigation and such action as may be deemed necessary, and

Whereas, The Executive Board has not made any satisfactory report pertaining to this resolution; therefore, be it

Resolved, That the International Seamen's Union of America in convention assembled, take immediate steps to eliminate such practice, otherwise the Atlantic Firemen will adopt retaliatory measures.

The committee reported as follows:

This resolution refers to the collection of a transfer fee varying from 10 shillings to £1 collected by the officials of the National Sailors' and Firemen's Union of Great Britain and Ireland, from members of the International Seamen's Union of America.

The Buffalo convention dealt with this subject and a complaint has been made to the President of the British union, but without results.

Your committee recommends that before retaliatory measures are adopted another effort should be made to straighten out by correspondence the complaint referred to.

We therefore recommend that Secretary Hansen be directed to communicate with Secretary Cathery of the British union, supplying details of the grievances in question and asking him to formally take up this matter at the next executive meeting of the British Sailors' and Firemen's Union.

The committee's report was adopted.

Distressed Fishermen in Alaska.

Upon the complaint of Delegate Meagher, of the Deep Sea Fishermen's Union, regarding sick and distressed fishermen stranded in Alaska iwthout means ofreturning to their homes in the States the committee submitted the following recommendation:

The committee believes that no satisfactory remedy for the foregoing complaint can be had except through legislation providing for the transportation of sick and distressed fishermen from points in Alaska to the place of embarkation in the United States and recommends reference to the Executive Board.

Adopted.

The Seamen's Franchise.

With regard to the communication from Attorney Axtell urging the introduction of amendments to the Constitutions or statutes of the various States permitting seamen to exercise their franchise as citizens when absent from their homes, your committee calls attention to the fact that this has been done in certain States for a number of years. California has twice voted upon and rejected measures of this character.

Your committee, however, is of the opinion that our efforts in this direction should be continued in co-operation with the general labor movement.

Adopted.

Liberty Loan Bonds.

Your committee has considered that portion of the Secretary-Treasurer's report under the caption "Liberty Loan Bonds."

We are pleased to note the splendid response made during the various Liberty Loan drives by individual members and District Unions.

The committee feels satisfied that the general membership and the District Unions as such will again patriotically respond when subscriptions for the fifth Liberty or "Victory" Loan campaign will be solicited.

Adopted.

The Seamen's Journal.

That portion of the Secretary-Treasurer's report under the caption "The Seamen's Journal," has had the careful consideration of your committee.

Your committee is unanimously of the opinion that the Journal, as one of the most valuable assets and weapons of our movement, should be supported on an equal basis by the entire membership of the International Seamen's Union. The Journal, however, is the property of the Sailors' Union of the Pacific and pending such time when that organization desires to relinquish control and ownership of the paper we feel that the present method of rendering support through subscriptions is about as equitable a basis as can be devised.

We are not unmindful of the fact, however, that practically every District Union should subscribe to a larger number of copies. Furthermore, we believe there should be a more general and judicious distribution of the copies received each week in bulk at the various headquarters and agencies.

For more than thirty-one years the Journal has rendered invaluable service to the cause of the organized seamen everywhere. It is doubtful, though, whether ever in its long and useful life there was as much need for its general circulation as there is right now and during the year ahead. Reactionary shipowners and plutocratic interests the world over are preparing for a general assault upon the American Seamen's Charter of Freedom. Senator Calder of New York has introduced a bill in which he not only aims to repeal all the essential features of the Seamen's Act, but actually and brazenly seeks to re-establish imprisonment for American seamen who quit their ships in the coastwise trade.

Under the circumstances a more general and liberal distribution of the Journal seems almost imperative and we recommend that the delegates to this convention take suitable action in this respect upon return to their homes.

Adopted.

This completes the report of the committee.

Respectfully submitted.

PAUL SCHARRENBERG, Chairman.
JOHN OLSON.
CHAS. MUNNICH,
J. LEONARD NORKGAUER,
OSCAR CARLSON.
PETER McKILLOP,

(To be Continued.)

THE ASCENT OF MAN.

We often hear this remark: This is a funny world. One must infer that this saying applies to the people who inhabit this globe.

As far as the world itself is concerned, we can see nothing queer or inharmonious about it. Its revolution through space and the rotation on its own axis are governed and controlled by reciprocal cosmic forces, and its animal and vegetable life function by laws engendered through matter and motion by which this planet is circumfused. On the other hand, the human inhabitants of this world—known by the collective name of man, and classified zoologically as Homo Sapiens (Man the Intelligent)—present an important theme for sober thought and serious consideration.

It is is not positively known how long the human species has existed on this earth, but according to the sciences of Geology and Paleontology, man seems to have come into being not later than the Glacial period, or about 100,000 years ago. It is established, however, that he has developed from the lowest form of organism; that his first stage as a conscious being was one of utter savagery; and that he has evolved by slow degrees up to his present physical and mental plane.

There is only a comparatively small portion of the people on this earth that can be termed intelligent or enlightened. The teeming masses, even in so-called civilized communities, are ignorant and uneducated, and, as a result, they are swayed by the few who possess the superior intelligence and knowledge.

This knowledge or intelligence, which has been monopolized by a few, can be used either for good or for evil; and it has always, with a few exceptions, been used by those individuals for the undoing and enslavement of their fellow men.

There has been a constant struggle between the powers for good and the powers for evil. Mankind has virtually never lived in peace. Wars of all kinds have continually cursed the world from the dawn of history. In the last twenty centuries there has probably not been more than 200 years of universal peace. Billions have been slain on battlefields, and other legions have been starved and massacred, and those who have perished by persecution, poverty and disease could scarcely be enumerated.

But man is not wholly bad. He carries within him some great potential regenerative forces. Despite all his cruelties and crimes and his many errors and shortcomings, he has in the meantime accomplished wonders in the field of science and invention.

Our great intellects who have shed light and luster upon the world have in no small degree lessened the baneful effects of slavery and barbarism. Such inventors as Gutenberg, Fulton, Morse, Watt, Edison, Marconi, etc., and such writers and thinkers as Shakespeare, Goethe, Hugo, Ingersoll, Bjornson, Ibsen, and others, must be regarded by every thinking man and woman as the chief creators of modern civilization.

The marvelous tools and machines in the hands of man have truly revolutionized human society and opened the gates to immense possibilities in the realization of a higher social order, and are destined to be the dominant factors in the industrial emancipation of the human race.

Had these wonderful epoch-making and wealth-producing machines been applied exclusively for the welfare of all men; had the harnessed forces of nature been made the servants of man's interest and comfort; had all the gifted men, the poets and philosophers in every age, used their talents for the moral uplift and physical betterment of all the people, mankind would to-day have been at the zenith of an ideal social status. But this was not to be. Civilization and barbarity are yet hideously blended.

Millions have sacrificed their lives in the greatest war of history just ending. But these millions have not died in vain; the deathknell of autocracy and human slavery has tolled; kings and czars will soon be dust; those who with brains and hands produce the things that are the foundation for human happiness shall soon become the arbiters of society; our great inventions and all the astounding results of work and thought and study shall be the powerful means of banishing poverty and disease from the world; lasting peace and universal brotherhood will ere long have become a fact and not a dream.

We are at last truly marching toward the sunrise of a new and golden era—an age of reason, in which science, justice and morality shall sit enthroned under the mighty canopy of freedom's ample sky. - Jakob Johansen, Member of I. S. U. of A.

GERMAN SALVAGE STUDIES.

While the German Navy has by its lawless acts sunk hundreds of ships, some of them in comparatively shallow waters, people have been busy in Germany working on the possibilities of salvage. Many new salvage devices have been brought out in the columns of the German technical press particularly with a view to operating at greater depths than those in which ships have hitherto been salved. One invention refers to the construction of floats consisting of a light porous material such as wood capable of withstanding high pressure. The wood is covered with sprayed metal to prevent water from entering the pores, the inventor asserting that for equal depths floats in the shape of hollow metal shells would have to be so thick that they would have little reserve of buoyancy. Another invention deals with deep-sea diving equipment, an improved form of "hand" for armored diving suits being described by means of which the thumb can be closed on any subject so as to form a tool-holder. Yet another invention describes an arrangement for lifting sunken ships with the use of hollow floats which are sunk in their floating condition and attached to the body to be raised, the sinking being effected by loading the floats by means of heavy bodies. This avoids the necessity of subsequent pumping out of the floats, which is considered cumbersome. It would be interesting to know where the Germans expect to find a field for the application of the ideas which are now finding expression.—Nauticus.

If Tom Hood had lived in the Southern States he would probably have chosen the child worker as the theme of his "Song."

nations." The conference represents millions of organized farmers. The resolutions, which were cabled to the President, state that "he (the President) has encountered through his espousal of the common people's purpose the hatred and opposition of the jingoes, profiteers and imperialists of all countries."

Then follows the warning to the Senate not to imperil the plan, "because the peoples of the world, not the governments, have won this war, and they will not be cheated of the fruits of their victory."

Grant 8-Hour Day.

Acting as umpire for the National War Labor Board, Julian W. Mack has ordered three large plants in Warren, Ohio, to establish the eight-hour day for their molders and apprentices, with the same wages paid for nine hours.

"It is to be noted," says the umpire, "that at the hearings the employes expressly stated their desire for the straight, not the basic, eight-hour day."

The workers originally asked for increased wages for a nine-hour day, but later changed this to an eight-hour day. The employers insisted that some of the workers voted for the change without understanding the situation, and to this claim, the umpire replied:

"I would feel impelled to concur in the result unless I were clearly satisfied that it was entirely unreasonable or illegal."

Wire "Union" Dissolves.

The Atlanta local of President Carlton's "union" of Western Union telegraphers has dissolved and the members have joined the bona fide Commercial Telegraphers' union en bloc.

At a meeting of the regular union the president of the defunct Western Union Employes' Association said:

"The men and women who joined the Western Union Employes' Association did so because they accepted at face value the assurance of the company and the men at the head of the organization that much good would be accomplished.

"We were a little slow in recognizing the fact that the association was organized for no other purpose than to defeat the regular union, but having at last the facts forced upon us, we are here to cast our lot with you, who we were deceived into fighting.

"The accomplishments of the association have been nil and no reforms have been obtained for the workers except those forced from the companies by the fear of the Commercial Telegraphers' Union.

"We have decided that if the Commercial Telegraphers' Union can accomplish as much as it has with a limited membership, much more can be obtained if all of us put our shoulders to the wheel in the organization recognized by the A. F. of L."

Tar Gang Fear Probe.

The Detroit Free Press says prominent business men in Jackson, Mich., fear the result of a probe in the outrage on Herbert Crawford, representative of the Machinists' union, who was tarred and feathered by a mob.

William Faupel of the State constabulary is the only man who has been arrested in connection with the case and the Free Press intimates that prominent citizens of Jackson are uneasy because the trial may show that anti-union business men were connected with the outrage and that they masked their outlawry behind the American flag.

"Incidentally," says the Free Press, "the effort to discourage the organization of the machinists in Jackson defeated itself by the Prussian tactics employed. Prior to the feather party the men were not responding at all readily to the organizing effort. After the feather party became known, the men's sympathies blazed up and in a few weeks the machinists were strongly organized."

Scores Law's Delay.

In an address to the Milwaukee Bar Association, Chief Justice Winslow of the State Supreme Court said "that every time a lawyer tries to put something over the court" and every time a court helps to delay justice, an argument is placed in the hands of those who oppose our present form of government.

"There is no question," said the chief justice, "but that many things in our social order ought to be changed and there is no question but that modern society, government, politics and the people who are in control have got to clean house."

THE I. S. U. OF A. CONVENTION.

(Continued from Page 9.)

lightened principle of universal health insurance; further

Resolved, That we demand the inclusion in laws of this subject of full medical care and a percentage of wages during temporary sickness, democratic administration of funds by those directly concerned, and that private insurance companies operating for profit be barred from the opportunity to traffic in the needs of sick workingmen.

Organizing Trap Fishermen.

The committee reported favorably on the following resolution introduced by Delegate Thompson of the Alaska Fishermen's Union:

Whereas, The International Union of Pile Drivers, Bridge and Structural Iron Workers are pursuing an aggressive organizing campaign around Puget Sound and vicinity of Southeastern Alaska, and

Whereas, Several unions of trap fishermen have been taken under the jurisdiction of said Pile Drivers, which constitutes an intrusion upon the jurisdiction of the Alaska Fishermen's Union, and

Whereas, The Alaska Fishermen's Union has never relinquished the right to jurisdiction in these waters, or in any part of the fishing industry; therefore, be it

Resolved, By the International Seamen's Union in convention assembled that we protest this intrusion upon the Alaska Fishermen's Union, and be it further

Resolved, That the Executive Board take such steps as may be deemed necessary to safeguard the interests of the Alaska Fishermen's Union.

The resolution was adopted by the convention.

Transfer to British Union.

The following resolution was submitted by the delegates from the Marine Firemen, Oilers and Watertenders' Union of the Atlantic and Gulf:

Whereas, Resolution No. 11 introduced at the Buffalo convention in 1917 was referred to the Executive Board for investigation and such action as may be deemed necessary, and

Whereas, The Executive Board has not made any satisfactory report pertaining to this resolution; therefore, be it

Resolved, That the International Seamen's Union of America in convention assembled, take immediate steps to eliminate such practice, otherwise the Atlantic Firemen will adopt retaliatory measures.

The committee reported as follows:

This resolution refers to the collection of a transfer fee varying from 10 shillings to £1 collected by the officials of the National Sailors' and Firemen's Union of Great Britain and Ireland, from members of the International Seamen's Union of America.

The Buffalo convention dealt with this subject and a complaint has been made to the President of the British union, but without results.

Your committee recommends that before retaliatory measures are adopted another effort should be made to straighten out by correspondence the complaint referred to.

We therefore recommend that Secretary Hansen be directed to communicate with Secretary Cathery of the British union, supplying details of the grievances in question and asking him to formally take up this matter at the next executive meeting of the British Sailors' and Firemen's Union.

The committee's report was adopted.

Distressed Fishermen in Alaska.

Upon the complaint of Delegate Meagher, of the Deep Sea Fishermen's Union, regarding sick and distressed fishermen stranded in Alaska iwthout means ofreturning to their homes in the States the committee submitted the following recommendation:

The committee believes that no satisfactory remedy for the foregoing complaint can be had except through legislation providing for the transportation of sick and distressed fishermen from points in Alaska to the place of embarkation in the United States and recommends reference to the Executive Board.

Adopted.

The Seamen's Franchise.

With regard to the communication from Attorney Axtell urging the introduction of amendments to the Constitutions or statutes of the various States permitting seamen to exercise their franchise as citizens when absent from their homes, your committee calls attention to the fact that this has been done in certain States for a number of years. California has twice voted upon and rejected measures of this character.

Your committee, however, is of the opinion that our efforts in this direction should be continued in co-operation with the general labor movement.

Adopted.

Liberty Loan Bonds.

Your committee has considered that portion of the Secretary-Treasurer's report under the caption "Liberty Loan Bonds."

We are pleased to note the splendid response made during the various Liberty Loan drives by individual members and District Unions.

The committee feels satisfied that the general membership and the District Unions as such will again patriotically respond when subscriptions for the fifth Liberty or "Victory" Loan campaign will be solicited.

Adopted.

The Seamen's Journal.

That portion of the Secretary-Treasurer's report under the caption "The Seamen's Journal," has had the careful consideration of your committee.

Your committee is unanimously of the opinion that the Journal, as one of the most valuable assets and weapons of our movement, should be supported on an equal basis by the entire membership of the International Seamen's Union. The Journal, however, is the property of the Sailors' Union of the Pacific and pending such time when that organization desires to relinquish control and ownership of the paper we feel that the present method of rendering support through subscriptions is about as equitable a basis as can be devised.

We are not unmindful of the fact, however, that practically every District Union should subscribe to a larger number of copies. Furthermore, we believe there should be a more general and judicious distribution of the copies received each week in bulk at the various headquarters and agencies.

For more than thirty-one years the Journal has rendered invaluable service to the cause of the organized seamen everywhere. It is doubtful, though, whether ever in its long and useful life there was as much need for its general circulation as there is right now and during the year ahead. Reactionary shipowners and plutocratic interests the world over are preparing for a general assault upon the American Seamen's Charter of Freedom. Senator Calder of New York has introduced a bill in which he not only aims to repeal all the essential features of the Seamen's Act, but actually and brazenly seeks to re-establish imprisonment for American seamen who quit their ships in the coastwise trade.

Under the circumstances a more general and liberal distribution of the Journal seems almost imperative and we recommend that the delegates to this convention take suitable action in this respect upon return to their homes.

Adopted.

This completes the report of the committee.

Respectfully submitted.

PAUL SCHARRENBERG, Chairman.
JOHN OLSON.
CHAS. MUNNICH,
J. LEONARD NORKGAUER,
OSCAR CARLSON,
PETER McKILLOP,
I. N. HYLEN.

(To be Continued.)

THE ASCENT OF MAN.

We often hear this remark: This is a funny world. One must infer that this saying applies to the people who inhabit this globe.

As far as the world itself is concerned, we can see nothing queer or inharmonious about it. Its revolution through space and the rotation on its own axis are governed and controlled by reciprocal cosmic forces, and its animal and vegetable life function by laws engendered through matter and motion by which this planet is circumfused. On the other hand, the human inhabitants of this world—known by the collective name of man, and classified zoologically as Homo Sapiens (Man the Intelligent)—present an important theme for sober thought and serious consideration.

It is is not positively known how long the human species has existed on this earth, but according to the sciences of Geology and Paleontology, man seems to have come into being not later than the Glacial period, or about 100,000 years ago. It is established, however, that he has developed from the lowest form of organism; that his first stage as a conscious being was one of utter savagery; and that he has evolved by slow degrees up to his present physical and mental plane.

There is only a comparatively small portion of the people on this earth that can be termed intelligent or enlightened. The teeming masses, even in so-called civilized communities, are ignorant and uneducated, and, as a result, they are swayed by the few who possess the superior intelligence and knowledge.

This knowledge or intelligence, which has been monopolized by a few, can be used either for good or for evil; and it has always, with a few exceptions, been used by those individuals for the undoing and enslavement of their fellow men.

There has been a constant struggle between the powers for good and the powers for evil. Mankind has virtually never lived in peace. Wars of all kinds have continually cursed the world from the dawn of history. In the last twenty centuries there has probably not been more than 200 years of universal peace. Billions have been slain on battlefields, and other legions have been starved and massacred, and those who have perished by persecution, poverty and disease could scarcely be enumerated.

But man is not wholly bad. He carries within him some great potential regenerative forces. Despite all his cruelties and crimes and his many errors and shortcomings, he has in the meantime accomplished wonders in the field of science and invention.

Our great intellects who have shed light and luster upon the world have in no small degree lessened the baneful effects of slavery and barbarism. Such inventors as Gutenberg, Fulton, Morse, Watt, Edison, Marconi, etc., and such writers and thinkers as Shakespeare, Goethe, Hugo, Ingersoll, Bjornson, Ibsen, and others, must be regarded by every thinking man and woman as the chief creators of modern civilization.

The marvelous tools and machines in the hands of man have truly revolutionized human society and opened the gates to immense possibilities in the realization of a higher social order, and are destined to be the dominant factors in the industrial emancipation of the human race.

Had these wonderful epoch-making and wealth-producing machines been applied exclusively for the welfare of all men; had the harnessed forces of nature been made the servants of man's interest and comfort; had all the gifted men, the poets and philosophers in every age, used their talents for the moral uplift and physical betterment of all the people, mankind would to-day have been at the zenith of an ideal social status. But this was not to be. Civilization and barbarity are yet hideously blended.

Millions have sacrificed their lives in the greatest war of history just ending. But these millions have not died in vain; the deathknell of autocracy and human slavery has tolled; kings and czars will soon be dust; those who with brains and hands produce the things that are the foundation for human happiness shall soon become the arbiters of society; our great inventions and all the astounding results of work and thought and study shall be the powerful means of banishing poverty and disease from the world; lasting peace and universal brotherhood will ere long have become a fact and not a dream.

We are at last truly marching toward the sunrise of a new and golden era—an age of reason, in which science, justice and morality shall sit enthroned under the mighty canopy of freedom's ample sky.—Jakob Johansen, Member of I. S. U. of A.

GERMAN SALVAGE STUDIES.

While the German Navy has by its lawless acts sunk hundreds of ships, some of them in comparatively shallow waters, people have been busy in Germany working on the possibilities of salvage. Many new salvage devices have been brought out in the columns of the German technical press particularly with a view to operating at greater depths than those in which ships have hitherto been salved. One invention refers to the construction of floats consisting of a light porous material such as wood capable of withstanding high pressure. The wood is covered with sprayed metal to prevent water from entering the pores, the inventor asserting that for equal depths floats in the shape of hollow metal shells would have to be so thick that they would have little reserve of buoyancy. Another invention deals with deep-sea diving equipment, an improved form of "hand" for armored diving suits being described by means of which the thumb can be closed on any subject so as to form a tool-holder. Yet another invention describes an arrangement for lifting sunken ships with the use of hollow floats which are sunk in their floating condition and attached to the body to be raised, the sinking being effected by loading the floats by means of heavy bodies. This avoids the necessity of subsequent pumping out of the floats, which is considered cumbersome. It would be interesting to know where the Germans expect to find a field for the application of the ideas which are now finding expression.—Nauticus.

If Tom Hood had lived in the Southern States he would probably have chosen the child worker as the theme of his "Song."

Labor News

With the convening of the State Legislature, Missouri trade unionists are marshaling their forces to secure the passage of a workmen's compensation law.

During the month of December 618 new members joined the International Brotherhood of Bookbinders. The brotherhood has issued a charter to the men and women employed in the Kansas City paperbox industry, cutters, gluing machine operators and assistants.

Thomas F. Flaherty of San Francisco, secretary of the National Federation of Postal Employes, declares it is imperative that salaries of postal employes be increased. Flaherty said the existing postal wage standard was established twelve years ago and meanwhile living costs have increased 70 per cent.

A general strike of organized labor designed to paralyze every industry in the country, beginning July 4 next, was decided upon by the National Labor Congress as a means of obtaining a new trial for Thomas J. Mooney and Warren Billings if Federal intervention and every other means adopted to procure the desired relief fails.

A movement to secure the building of better homes for working people in Iowa is gaining strength through the activity of the Iowa State Housing Association, which was organized for this purpose. The proposed law would regulate window openings, floor areas, sanitation, ventilation, fire protection, privacy, and the height of dwellings.

With an almost 100 per cent. organization, janitors in Chicago succeeded in winning their strike for higher wages. Rates are doubled in some cases. Under the new agreement a janitor must be given fifteen days' notice before he can be discharged. If he lives in the building he must have fifteen days to move. The workers must give fifteen days' notice if they intend quitting their employment. Wives of janitors can not be hired for janitor work. This stops the practice of an entire family working to secure a bare living.

Members of the American Federation of Labor Railway Employes' Department are conducting a campaign against piece work in the railroad shops of this country. This system has already been abolished on the Baltimore & Ohio and the D., L. & W. railroads and ultimatums have been served on the Atlantic Coast Line, the Burlington and the Elkhart, Ind., shops of the New York Central lines. Officers of the Railway Employes' Department advise that this question be handled as a system federation and not as a local matter.

In a study of the health of Ohio coal miners, conducted by Dr. Emory R. Hayhurst of the State Department of Health, it is stated that working conditions are not as good as the average of most industries in that State. While ventilation in the mines is good in the main, many of them are of a damp and muddy type and work is such that exposure to this hazard is large. Blasting during working hours fills the mine air with poisonous gases and occasions considerable health complaints. The mining laws, he says, should be amended in this respect and the division of mines given a larger force to compel obedience.

INFORMATION WANTED.

Members of the crew of the steam schooner "Florence Olsen" who signed articles at New York on September 15, 1918, for a voyage to Central America and return, and who were on board said schooner at the time she salved the steam schooner "Claremont" near the Tucker Islands, off the coast of Nicaragua, on October 31, 1918, and towed her into Christobal, will kindly communicate with Silas B. Axtell, 1 Broadway, New York City. 12-25-18

Home News

Women can not serve on juries in Oklahoma, under a decision given by Attorney General Freeling.

The San Francisco Police Department is to have a "shotgun" motor patrol in the outlying districts.

A bill stopping immigration will be reported to the House with hope of getting favorable action before March 4, when Congress adjourns.

An additional appropriation for Benicia arsenal was asked of Congress by Secretary Baker. It is to be divided as follows: Quartermaster storehouse, $18,000; hospital, $18,000; roads, $13,500.

Within thirty days a passenger-carrying aerial service will be ready to start its schedule from San Francisco to San Diego, stopping at Monterey, Santa Barbara, Los Angeles and other points.

WHY LAXCARIN IS A VITAL NECESSITY FOR THOSE SUFFERING WITH INDIGESTION, LA GRIPPE, COLDS, INFLUENZA, NERVOUS PROSTRATION, A GENERAL RUN DOWN CONDITION

LAXCARIN is a vital necessity for those who suffer from these diseases, because it is a preparation that will help Mother Nature to perform its duties, because it will clean the intestinal tracts, eliminate the malignant poisons and thereby prevent blood poisoning.

You cannot possibly live—and live long—if your bowels do not perform their natural functions. One of the greatest curses which have been cast upon the human being is constipation. Whether constipation is the result of neglect during childhood, or whether it is hereditary—it must be remedied. The sooner the better. Constipation must be done away with all price.

Lucky is the man who has never felt the ill effects of irregular bowel movement. He does not know what it is to wake up in the morning with the same tired feeling felt before going to bed the night before. Headache early in the morning does not bother him. He does not feel that terrible feeling which is caused by a coated tongue. His appetite is such that he can eat a whole calf early in the morning. His ambition is boundless—and work appeals to him. He is full of life—energy—of a desire to live.

But what about the man or woman who is afflicted with constipation or stomach trouble? Life is not worth a two-cent piece to those. It is the same continuous drudgery—the monotony of the everyday suffering. As if a great stone would be tied to their back, which must be borne along continually. From early morning to late at bed time. Nothing but a desire to end that wretched existence.

Take for instance the man who is suffering from indigestion and irregular bowel movement. He does not spring out of the bed as vigorously as the man who is healthy. He has a tired feeling early in the morning. He has a headache. His tongue is coated. He has a disgusting taste in his mouth. No desire to start the day—or to live through it. He barely touches breakfast. Work is not work to him—it is drudgery. It does not matter what kind of work he is doing. No energy—not an ounce of ambition.

Why do you suffer? Is it worth while. The LAXCARIN PRODUCTS CO. is placing on the market a preparation which is guaranteed to move your bowels. Why not take a chance? Even if you have taken a chance before. If you suffer daily backaches, sick headaches, dizzy spells and annoying stomach and bowel irregularities you naturally seek a remedy that will give freedom from these discomforts—a remedy that is what it is claimed to be.

Act today. And be another man tomorrow. Your health should be your very first consideration. Money is nothing. Send one dollar today and receive by return mail a box of LAXCARIN. Then tell your friends about the change which has taken place in your life.

LAXCARIN is a pure preparation. It will not hurt even the baby. It may be used with absolute confidence by old people. It is good for middle aged folks. Trial will convince you.

LAXCARIN IS SOLD SOLELY BY THE

LAXCARIN PRODUCTS CO.

PRICE—$1.00 per Box; 6 Boxes, $5.00.
Money Orders, Cash or Registered Letters.
Will send C. O. D. Anywhere.

DEPARTMENT E-99 **PITTSBURGH, PA.**

Domestic and Naval

Norway is preparing to make a claim of 1,000,000,000 kroner ($370,000,000) from Germany for ships sunk by submarines during the war.

During the war the C. P. O. S. ships have transported over a million troops and passengers on war business. Only eight soldiers were lost by enemy action.

The French steamer "Chaproi" struck a floating mine in the Straits of Messina and foundered. Five hundred of those on board, most of them Greeks and Italians, were drowned. Another steamer rescued approximately 150 persons.

All the Dutch ships requisitioned by the Shipping Board for war emergency operation, with the exception of those engaged in Government service will be turned back to their owners as fast as they become available in American ports.

The steamship "Beaver," which formerly plied between Portland and San Francisco flying the house flag of the old San Francisco and Portland Steamship Company, is to be retained as mother ship of the eleven submarines now based at San Diego and San Pedro.

German submarine U-139 arrived at Brest a fortnight later than other U-boats turned over to France, owing to her damaged condition. She is the world's largest submarine, being 354 feet long and having a displacement of 2900 tons. She made only one cruise before the armistice was signed.

The American steamer "Lake Erie," outward bound, was sunk in a collision with the British steamer "Hazel Branch," inward bound, at the anchorage in Cardiff roads. All members of the crew were saved. The "Lake Erie" was a vessel of 1187 net tons register and was operating in the United States naval overseas transportation service.

Franklin D. Roosevelt, Assistant Secretary of the Navy, after a conference with Admiral Sims on plans for the demobilization of the American Navy in European waters, said he was confident that with the exception of about 3000 men the American Navy would be out of Europe not later than February 15. When the armistice was signed there were 70,000 American sailors in European waters.

No man in the Navy will be discharged from the service except at his own request, according to orders received from the Secretary of the Navy. Instructions were sent to all ships and stations to proceed at once with all authorized discharges. This means that about 40 per cent. of the reserves' regular Navy men enlisted for the period of the war and four-year men enlisted since the declaration of war, are to be discharged immediately.

Although no official statement has yet been made, it is understood that the British warship "Hood," now nearing completion, will be the largest fighting vessel in the world. The "Hood" is 894 feet long and will carry eight fifteen-inch guns. Her hull is fitted with an outer cushion against which, it is claimed, torpedoes and mines will explode harmlessly. The vessel is expected to attain a speed of at least forty miles an hour. The "Hood" will cost $3,375,000. It is said that three other battle cruisers of the same type as the "Hood" are being built.

The Public
A Journal of Democracy

Poverty is A Crime!

IT isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

NAVIGATION INSTITUTE OF NEW ENGLAND
CAPT. JOSEPH T. DRAKE
Superintendent.
(Former Hull Inspector and Examiner at Boston, Mass.)
This Institute has been established to assist seamen to obtain licenses as officers of merchant vessels. All of our students are successful; there being no failures when passing for examination before the United States Steamboat Inspection Service. Our methods of instruction are evidently pre-eminent in securing highest possible license for eligible candidates. Tuition Fee very reasonable.
A Catalog and further information furnished on request.
Rooms 301-305 ADAMS BUILDING
9 Doane Street BOSTON, MASS.

INFORMATION WANTED.

Hans Meyer, member of the Sailors' Union of the Pacific, who was last seen in Honolulu, T. H., on Feb. 17, 1914, is inquired for. Any one knowing his whereabouts, please notify Henry Capell, 51 South St., New York, N. Y.—5-29-18.

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

Members of the crew of the SS. "Kellogg" who were on board when she picked up the SS. "Catania" can obtain money due them for salvage services by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

When making purchases from our advertisers, always mention The Seamen's Journal.

INFORMATION WANTED.

A libel has been filed on behalf of the following officers and members of the crew of the steam-schooner "Florence Olsen" against the owners of the steam-schooner "Claremont" and the owners of the cargo, arising out of the salvage services performed by the "Florence Olsen" to the "Claremont" on or about the 31st day of October, 1918, off the coast of Nicaragua: George Muceneek, E. Kemfield, H. Julius, G. J. Borman, H. Nelson, Thomas C. Baird, S. A. Alm, Gaston Karlson, John Demliz, John Behrin, A. Von Sohendel, H. Hofstra, W. Christiansen, C. Anderson. The members of the crew who have not yet filed their claims with the undersigned can be joined by co-libelants' petition. An adjustment of this salvage claim is expected very shortly and no time should be lost in filing claims. S. B. Axtell, Proctor for Libelants, 1 Broadway, New York City.

Members of the crew of the S. S. "St. Charles," which salvaged the S. S. "Tea" in 1917, who have not yet filed with me their claim for their share of the salvage money, should do so as soon as possible, as the case will come up for trial in a very short time.

ISIDORE A. RABINOW,
Attorney for Seamen.

News from Abroad

British prisoners numbering 158,431 have been released by the Germans. Of these 8047 are officers, 145,776 are of other ranks and 4608 are civilians.

Canadian Minister of Railways has announced Vancouver is to be connected with Liverpool and Canadian Atlantic ports by steamers running via the Panama Canal.

Members of the British mission in Lemberg narrowly escaped death during bombardment of that city by the Ukrainians, when a shell exploded in a street near them.

Twenty German girls at Andernach have been arrested, charged with a violation of General Pershing's order forbidding them to talk with American soldiers.

One hundred thousand Bombay cotton mill operatives are on strike. They demand an increase war bonus. There has been no serious disturbance apart from stone throwing by non-strikers.

A soft blue-white diamond weighing 388¼ carats, has been found at the Jagersfontein mine, Orange River Colony. This promises to become one of the diamond field's historic gems.

Somewhat of a sensation was caused in Berlin, according to a dispatch to the Handelsblad, when the nuns from the Catholic Lyceum in Lindenstrasse marched to the polling booths in a group.

Disorders in Hamburg, in which several persons were killed and others wounded, are reported in dispatches by way of Zurich. The disorders were incident to demonstrations in connection with the demand for the release of the sailors who had been imprisoned by the Government as the outcome of previous disturbances.

Prince Feisal, a son of the King of the Hedjas, has compiled a memorandum for presentation to the Peace Conference asking complete independence and autonomy for the Arabian state of the Hedjas to consist of Syria, upper Mesopotamia, lower Mesopotamia, Yemen and Nejd. The territory of Nejd is a tribal state.

Rice riots are occurring daily in Japan. The suggestion of riceless days twice a month has been made as a result. The Seiyukai government is powerless to act radically to lower the price because it obtains its support in large measure from big farmers and land owners who naturally profit by high prices. One extreme proposal is a riceless day once a week.

The British air ministry is planning an areo route from London to Capetown, a journey of 5300 miles by airplane and of 5800 miles if hydro-airplanes are utilized, according to the Daily Chronicle, which says that already most of the preliminaries have been worked out and that parties of surveyors are in Africa locating likely places at which to erect repair and supply stations.

The British empire producers' organization has written to Premier Lloyd George stating that the affiliated associations of the empire have indorsed in the strongest terms the organization's demands that the Central Powers shall pay Great Britain an indemnity commensurate with the cost of the war. The associations uniting in this plea, it is stated, represent well over $5,000,000,000 of British capital.

With the Wits

"Bliggins tries to be cheerful." "Yes," commented Mr. Groucher; "he tries so hard that he makes himself and every one else uncomfortable." —Washington Star.

Husband—Have you brought your opera glass?

She—Yes, but I can not use it.

Husband—Why not? She—I have left my bracelets at home.—London Opinion.

"Sometimes Gwendolyn speaks and sometimes she doesn't," said Maude.

"Yes," replied Maymie. "She got that way since she took a position in the telephone exchange."—Washington Star.

Young Minister (receiving gift of fountain pen)—Thank you. I hope I shall now be able to write better sermons.

The Lady—I hope so.—Boston Transcript.

Silas (in a whisper)—Did you git a peep at the underworld at all while you wux in New York, Ezry?

Ezra—Three times, b'gosh. Subway twice an' ratscellar once.—Buffalo Express.

"Say, that lot you sold me is three feet under the water." "Is it?" "Yes, it is, and you know it." "Well, it's a good thing you told me. I can let you have a bargain in a canoe." —Kansas City Journal.

Publisher—What literary experience have you previously had?

Applicant—I've been writing the screen text for the moving pictures.

Publisher—I'm afraid you won't do. Our man must have some knowledge of grammar and spelling. —Life.

"Two years are required to produce a fullgrown oyster." "I don't think I'd like the business," declared the old cattleman. "Why not?" "Not enough to show for your effort. Why, you could raise a steer in the same length of time."—Kansas City Journal.

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Horace R. Taylor — Henry Taylor

THE SEAMEN'S JOURNAL.

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 23. SAN FRANCISCO, WEDNESDAY, FEBRUARY 12, 1919. Whole No. 2525.

THE GALVESTON CONVENTION.

Conclusion of the Summarized Daily Proceedings.

Last week's issue of the Journal had the first half of the recent I. S. U. of A. convention proceedings.

This was the Twenty-second Annual Convention of the International Union. It was held at Galveston, Texas, from January 20-27 inclusive.

The second and final instalment of the summarized proceedings follows:

REPORT OF COMMITTEE ON LEGISLATION.

Chairman Rosen of the Committee on Legislation submitted the following report:

We your Committee on Legislation to whom were referred the President's report and other matters herewith submit the following report:

In dealing with that part of the President's report referring to the "Seamen's Act," your committee approves of the actions of President Furuseth and the Executive Board and their methods of handling the cases now pending before the courts, and recommend that the principles promulgated by the New York convention and concurred in by the Buffalo convention be adhered to in enforcing the "Seamen's Act," so that the benefits contemplated therein may be fully attained.

The principles in question are as follows:

Defense of Seamen's Act.

1. That the convention place itself on record as being utterly opposed to any and all amendments to the Seamen's Act, that has for its purpose and intent the repeal of said law, or which in any other way will change the spirit of the law, and that the Legislative Committee be hereby empowered to take any action it may deem best in the preservaton of our present law, and work for proper construction of same.

2. That as many of the Legislative Committee as may be needed, be authorized and instructed to proceed to Washington, D. C., at any time it may become necessary for them to do so, and to incur such expense as may be indispensable for this purpose, subject to the supervision of the Executive Board.

3. That the different district organizations keep in close touch with seamen of all nations coming into the several ports where branches are now or may be hereafter established, for the purpose of giving to those seamen all information of importance regarding their rights under the Seamen's Act.

4. That whenever advice and assistance is needed, it be given to the extent of the power and means of the district, in obtaining for these men legal counsel in the District Courts of the United States.

5. Whenever such cases are taken to the courts, the attorneys employed by the District or Local Unions shall be requested to immediately furnish a statement of the facts involved, which shall be sent to the International President.

6. That the Executive Board, through the International President, be kept informed regarding such cases, to the end that we may contend for a uniform construction of the law by the several District Courts, and, further, that appeals may be taken or contested whenever deemed necessary by the Executive Board.

7. That the cost of taking or contesting such appeals be borne by the International Union.

8. That when such action shall, in the judgment of the Executive Board, become necessary, the Board shall make a report to the District and Local Unions with a request for such funds as may be needed for this purpose.

Adopted by unanimous vote.

The Seamen's Compensation Bill.

Referring to the Seamen's Compensation Bill (S. 4342), as introduced by Senator Hiram W. Johnson, your committee recommends:

That the bill as modified by the United States Shipping Board's attorney, be submitted to the Legislative Committee for careful analysis, and after such analysis has been made, if the findings of the committee are that the intent of the bill as originally drafted has not been destroyed, that the Legislative Committee be instructed to use every endeavor to have said bill enacted into law.

Adopted.

A resolution upon this subject, introduced by the delegation from the Fishermen's Union of the Atlantic, urging the early enactment of the Johnson Compensation bill, was also unanimously adopted.

Transfer of Shipping Commissioners.

The following resolution, introduced by Delegate G. H. Brown of the Eastern and Gulf Sailors' Association, was reported favorably:

Whereas, The present system of employment of seamen in the ports on the Atlantic and Gulf coasts is an obsolete system; and

Whereas, The crimping evil is still flourishing on the Atlantic and Gulf coasts because no adequate system of giving the seekers of employment (the seamen) proper facility to obtain employment on board ships; and

Whereas, The United States Shipping Commissioners' duties in respect to these matters do not function in accordance with the purposes and law for which the United States Shipping Commissioners were established; therefore, be it

Resolved, That we urgently petition the President of the United States of America to transfer the United States Shipping Commissioners from the Department of Commerce to the Department of Labor and that employment bureaus for seamen be established under the supervision of the Department of Labor in the larger ports.

Adopted.

Marine Hospital at Port Townsend.

The committee recommended adoption of a resolution introduced by the delegate from the Marine Cooks and Stewards' Association of the Pacific, as follows:

Resolved, That the Legislative Committee urge upon the Surgeon General, that more adequate hospital facilities be provided at the port of Seattle, Wash., and that the local unions there prepare and submit facts to the Legislative Committee regarding hospital service at that port, that same may be properly presented to the Surgeon General.

Adopted.

In dealing with certain parts of the President's Report the committee submitted the following:

In approving the actions of the President regarding the draft law and manning of merchant vessels by naval crews your committee desire to compliment President Furuseth on the manner in which these problems were handled.

Adopted.

In commenting on that part of the President's report, "The Call to the Sea," your committee desire to express approval of that proclamation which has done so much in solving the problem confronting the nation, namely, the proper manning of the ships.

Adopted.

With regard to "A Message to Seamen" referred to in the President's report, your committee in approving this work desire to say that too much stress cannot be laid in calling attention to this remarkable document, remarkable not only for the fund of information it contains, but also for the task it was called upon to do and which it so ably performed, thus earning for itself a place in the annals of history.

Adopted.

In view of the fact that two bills, nullifying important features of the Seamen's Act, have been introduced in Congress, namely, S. 5285 by Senator Calder of New York and H. R. 13671 by Congressman Gould of New York, your committee recommend that the convention go on record as being decidedly opposed to both of these bills and urge upon the delegates to this convention after returning to their respective homes to use every means to bring about the adoption of resolutions condemning these bills, and we further recommend that the Legislative Committee be instructed to use every agency they can bring to bear against the enactment of said bills into law.

Adopted.

Your Committee on Legislation having considered the present physical condition of Vice-President Olander and realizing the service he has rendered the International Seamen's Union of America in legislative matters without any financial remuneration from the International, we believe it is the duty of the International Seamen's Union of America to show appreciation of his past service and recommend that the Secretary-Treasurer be authorized to expend weekly a sum equal to that specified for the President, to commence February 1, 1919.

Adopted.

In concluding, your committee endorses the recommendations embodied in the President's report, and especially in that one of printing in full as an appendix to the convention proceedings, the memorable message to seamen by the President of the United States, in which these words occur: "No more honorable or

serviceable task can come to any of our people than that of manning our merchant marine."

JACK ROSEN, Chairman;

PATRICK FLYNN,
THOS. CONWAY.
PATRICK O'BRIEN.

REPORT OF COMMITTEE ON ORGANIZATION.

Chairman Griffin of the Committee on Organization submitted the following report:

In the matter of organizing work among the Cooks and Stewards of the Great Lakes we recommend approval of the following resolution introduced by Delegates J. M. Secord, David E. Grange and William L. Cartledge of the Marine Cooks and Stewards' Association of the Atlantic:

Whereas, Owing to the fact that it is necessary to continue the work of organizing the Marine Cooks and Stewards' Union of the Great Lakes, during the coming season of 1919, if they are to be thoroughly organized and placed in a financial position so that they will in the future be able to continue in business without any further help financially; therefore, be it

Resolved, That this convention does hereby grant to the Marine Cooks and Stewards' Union of the Great Lakes, two organizers for the term of one year, commencing February 1, 1919.

Adopted.

The committee continued to report, as follows:

Those sections of the Secretary-Treasurer's report under the caption: "Historical Information," which were referred to this committee, are submitted with recommendations as follows:

First—That the action of the Executive Committee in granting a charter to the Marine Firemen and Oilers' Union of British Columbia be approved. Endorsed.

Second—That the action of the Executive Committee in granting a charter to the Marine Cooks and Stewards' Association of British Columbia be approved. Endorsed.

Great Lakes Cooks—Inasmuch as very beneficial results have been obtained through the policy pursued during the past year in the methods of organizing, we recommend that said policy be maintained during the ensuing year. We further recommend that the reports of H. P. Griffin, Administrator, and J. M. Secord, Secretary of the Marine Cooks and Stewards' Union of the Great Lakes, dealing with these matters be printed in the proceedings. Endorsed.

In the matter of the Atlantic District Unions, which show such wonderful growth during the year, we commend the efforts which have resulted in these achievements, with approval of the Secretary's report covering same. Concurred in.

Owing to the war and economic conditions the Pacific District does not show the same growth as the Atlantic, but the percentage of organization has been maintained at the well established standards of previous years.

Under the caption "Organizing," we recommend that all organizers be paid a minimum salary of forty ($40.00) dollars per week. Adopted.

The high commendation given the Atlantic Fishermen for their magnanimous action in volunteering to relieve the International of organizing expense, is well deserved and exemplifies a high spirit of unionism.

In the matter of recommendations regarding Fishermen and organizations of men sailing on Canadian ships, we recommend that the Executive Committee give these subjects careful consideration and formulate a permanent working plan for the future. Adopted.

Submitted by the Committee on Organization.
H. P. GRIFFIN, Chairman;
JOHN CLARK,
JOHN CLAUSEN,
J. M. SEWARD,
JAMES LYNCH,
J. VANCE THOMPSON,
C. F. MAY.

REPORT OF COMMITTEE ON CONSTITUTION.

The Committee on Constitution recommended nonconcurrence upon a resolution providing that in the future the conventions of the International Seamen's Union of America shall be held biennially. The committee stated they did not believe it the majority sentiment of the membership to change the present policy in this respect at this time.

The committee's recommendation was adopted.

A resolution providing that suitable quarters be secured at Washington, for President Furuseth was reported favorably by the committee and adopted by the convention.

Upon recommendation of the committee the convention voted to increase the monthly per capita tax to the I. S. U. of A., from 5 to 8 cents per member, to take care of the heavy bills incurred in protecting the seamen in the courts, to meet the new item of expense provided by the affiliation with the International Seafarers' Federation, and the increase in disbursements generally.

Two minor amendments to the Constitution were adopted, more specifically providing what steps must be taken by the Secretary-Treasurer in case of a referendum vote.

Referring to that part of the Secretary-Treasurer's report appearing under the caption "Recommendation" the committee recommended that the President be authorized during the coming year to appoint a committee of five, representing the Cooks, Firemen, Fishermen and Sailors, who shall outline specific plans according to the recommendations and report same to the next convention for action.

Adopted.

With regard to that part of the Secretary-Treasurer's Report appearing under the caption "Practice of Uniformity," the committee commended the progress made in this respect and recommended that all District Unions urge upon their membership to so recast their respective constitutions that the policy of uniformity can be realized.

Adopted.

The report was signed by the full committee, as follows:

PERCY J. PRYOR, Chairman,
JOHN W. ELLISON,
JOHN H. MEAGHER,
C. J. HARRINGTON,
DAN INGRAHAM,
C. G. LARSEN.

The Committee on Resolutions then submitted the following supplementary report:

SUPPLEMENTARY REPORT OF COMMITTEE ON RESOLUTIONS.

Resolved, By the International Seamen's Union of America in Twenty-second Annual Convention assembled at Galveston, Texas, January 20th to 25th, 1919, that we deeply appreciate the splendid reception and entertainment rendered to the delegates in attendance at this convention by the citizens of Galveston generally, further

Resolved, That we are especially grateful to Mayor Kempner and City Commissioner Shea for the cordial welcome extended to the convention at the opening session, further

Resolved, That we are thankful to the Commercial Associaton and the Labor Council of Galveston, also to the Atlantic District Unions and their joint entertainment committee for the fine diversions provided the delegates during their spare moments in Galveston, further

Resolved, That we hereby voice our appreciation to the press of Galveston for the full and fair reports published daily with regard to the proceedings of the convention.

PAUL SCHARRENBERG, Chairman;
J. LEONARD NORKGAUER,
JOHN OLSON,
PETER McKILLOP,
OSCAR CARLSON,
I. N. HYLEN,
C. MUNNICH.

Adopted.

New England Fishermen.

The following resolution introduced by unanimous consent, at the instance of the delegates from Fishermen's Union of the Atlantic, was adopted:

Whereas, The Bay State Fishing Company of Boston, Mass., is carrying on advertisement in the Gloucester Daily Times, setting forth earnings of the various men employed in the Bay State fishing vessels on the Atlantic Coast, evidently with a view of arousing public opinion against the Fishermen's Union of the Atlantic; and

Whereas, The present request of the fishermen on the Atlantic at this time is not for an increase of wages and percentages on fish, but for correction of unusual and unbearable hours of labor caused by shortage of men as crews for these vessels. The men now request a sufficient increase in the number of men employed as the crew on these fishing vessels that will warrant decent hours and fair living conditions; and

Whereas, The foregoing have been proven as the exact facts of the present controversy between the Fishermen's Union of the Atlantic and the companies operating the vessels; therefore be it

Resolved, By the International Seamen's Union of America, in regular session assembled at Galveston, Tex., January 27, 1919, that the Secretary of the I. S. U. of A. is hereby authorized to furnish the press of the country, and especially the press of the Atlantic Coast and labor journals, with full details explaining the true condition of the controversy as herein mentioned, to the end that the unfair and unjust methods of the companies be fully exposed, and the fishermen's position be properly placed before the public so that they may receive the consideration justly due them.

Election of Officers and Convention City.

The following officers were unanimously elected for the ensuing term:

President, Andrew Furuseth of San Francisco.

First Vice-President, Patrick Flynn of San Francisco.

Second Vice-President, Victor A. Olander of Chicago, Ill.

Third Vice-President, Thomas Conway of Buffalo.

Fourth Vice-President, H. P. Griffin of New York.

Fifth Vice-President, P. B. Gill of Seattle.

Sixth Vice-President, I. N. Hylen of San Francisco.

Seventh Vice-President, Percy J. Pryor of Boston.

Eighth Vice-President, Eugene Steidle of San Francisco.

Ninth Vice-President, William H. Brown of Boston.

Tenth Vice-President, Oscar Carlson of New York.

Editor Seamen's Journal, Paul Scharrenberg of San Francisco.

Secretary-Treasurer, T. A. Hanson of Chicago, Ill.

Legislative Committee: Andrew Furuseth, Victor A. Olander, Patrick Flynn, H. P. Griffin and I. N. Hylen.

Delegates to the American Federation of Labor Convention (to be held at Atlantic City, N. J., in 1919): Andrew Furuseth, Victor A. Olander, Percy J. Pryor, Patrick O'Brien and I. N. Hylen.

Delegates to the International Seafarers' Conference (to meet in London, England, February 24, 1919): Andrew Furuseth and Patrick Flynn.

Legislative Representative: Third Vice-President Thomas Conway was unanimously elected to represent the International Union at Washington during the absence of Andrew Furuseth.

Convention City: San Francisco was chosen as the next convention city. The convention will be called to order the second Monday in January, 1920.

INJURIES TO SHIP'S BARBER.

A. L. Hartman, employed as a barber on the S. S. "Shinyo Maru," of the Toyo Kisen Kaisha at the nominal rate of $1 per month, went ashore at Nagasaki on his own business. On returning to the ship he lost his balance and fell, his left leg being caught in the hawse hole of the launch, resulting in his injury, for which he sued in the U. S. District Court (N. D., Cal.) and was awarded $1400 and costs by Judge Van Fleet, being $700 for medical and other expenses and a like sum for his sufferings and loss of time.

The shipowners brought appeal denying among other things that the crew of the launch were employed by them, but on the contrary that they were employed by an independent contractor. They further set up the plea of contributory negligence by the plaintiff and that the position of the parties was governed by the laws of Japan at the time of the accident.

The Circuit Court of Appeals (Ninth Circuit) found that the owners of the launch though independent contractors were really retained by the shipowners for the transportation of passengers and crew from ship to shore. However, the plaintiff did not make use of the launch for the purpose of his employment but for his own purposes. In reversing the judgment of the lower court Circuit Judge Ross said:

"After a careful consideration of the question of the alleged negligence, but one conclusion can be reasonably reached upon the evidence, and that is that the unfortunate accident was not due to any negligence on the part of any employe in the operation of either the launch or ship, but to the attempt of the defendant in error to step from the launch to the gangplank, in the then condition of wind and water, with the bundles under one of his arms. It would serve no useful purpose to review the evidence, but, reaching that conclusion, it is obviously our duty to disregard the finding of the trial court to the contrary. It being unnecessary to consider any of the other points relied upon by the plaintiff in error, the judgment is reversed, and the case remanded to the court below for a new trial."

Demand the union label upon all purchases!

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Labor Has New Status: English Editor.

Reynold's Newspaper, one of England's leading liberal publications, prints an editorial on after-the-war problems, in which the editor makes this significant statement:

"If there is one lesson which has been gained from the war, it is that the value of labor was always under-estimated, and the value of capital always over-estimated. In the first week of the war, the whole banking system of this country would have crashed into ruin, only for the fact that the Government supported the money market with the national credit. And that credit, it has been clearly shown, lay not so much in banks and capitalists, as had been supposed, as in the power of the people to use their energy and their skill to do the work that was required if we were to win the war.

"Labor has got, through the war, a new status. It has been clearly demonstrated that only those who work, whether with hand or brain, count; the rest matter little or nothing. And that fact having been demonstrated, it is likely to be made the center of the economic discussions of the future.

"We in this country have shown that, despite the fact that 6,000,000 men have been taken from industry, and millions more men and women have been diverted into making things that kill instead of things that give life, the workers have been on the whole better fed, and better off generally, than before. When those millions of men and women are again established in the arts of peace, are they all going back to the same old stage as before we learnt the great lesson? We think not."

Need for Education Is Vividly Pictured.

In a publication just issued by the United States Bureau of Education, the need for education in this country is vividly pictured.

"What should be said of a world-leading democracy wherein 10 per cent. of the adult population can not read the laws which they are presumed to know?" is asked.

"What should be said of a democracy which sends an army to preach democracy wherein there was drafted out of the first 2,000,000 men a total of 200,000 men who could not read their orders or understand them when delivered, or read the letters sent them from home?

"What should be said of a democracy which calls upon its citizens to consider the wisdom of forming a league of nations, of passing judgment upon a code which will insure the freedom of the seas, or of sacrificing the daily stint of wheat or meat for the benefit of the Roumanians or the Jugo-Slavs when 18 per cent. of the coming citizens of that democracy do not go to school?

"What should be said of a democracy in which one of its sovereign states expends a grand total of $6 per year per child for sustaining its public school system?

"What should be said of a democracy which is challenged by the world to prove the superiority of its system of government over those discarded, and yet is compelled to reach many millions of its people through papers printed in some foreign language?

"What should be said of a democracy which expends in a year twice as much for chewing gum as for school books, more for automobiles than for all primary and secondary education, and in which the average teacher's salary is less than that of the average day laborer?

"What should be said of a democracy which permits tens of thousands of its native-born children to be taught American history in a foreign language—the Declaration of Independence and Lincoln's Gettysburg speech in German and other tongues?

"What should be said of a democracy which permits men and women to work in masses where they seldom or never hear a word of English spoken?

"Yet, this is all true of the United States of America in the year of grace, 1918, wherein was fought the second battle of the Marne and the battle of the Argonne forest."

Packer Is Mournful.

These are sad days for the meat packer, according to J. Ogden Armour, who assured the United States Senate Committee on Agriculture that "there are some people who wouldn't have any business and there are times when I don't blame them."

Mr. Armour said the reason that the five great packing plants have forged ahead is because "there are people who perhaps work a little harder, who take more chances, who add more things to their business, who go into greater detail and thus work out to a large basis."

Mr. Armour stated, however, that half a billion dollar investment was necessary to go into the packing business.

Mr. Armour admitted that the "big five" packers maintain a secret fund "for purposes of legislation and litigation," and that the assessments were based on the amount of business done. It was also admitted that the food administration permitted the packers to make 4 per cent. profit in addition to 9 per cent. profit, which has been claimed heretofore as the limit of the packers' profits. The 4 per cent. profit was kept secret, Mr. Armour said, and was allowed for the purpose "of paying interest on money borrowed."

The witness agreed that the total profits of his concern were nearer $25,000,000 than $15,000,000, as had been asserted.

Later, in discussing his relations with the other packers, Mr. Armour said, "We are all content to go along and make a little money."

Business Oligarchs Must Change Tactics.

Industry can no longer be ruled as an oligarchy, and democratic principles must be applied, declared R. J. Caldwell, business man of New York and member of the employers' industrial reconstruction investigating commission, appointed by the Department of Labor to make a survey of the European industrial situation.

"We rule our industry as an oligarchy," said Mr. Caldwell. "We regulate wages arbitrarily—save where labor unions are able to intervene. We refuse to consult with the workers about their own working conditions.

"What harm can it do to extend the application of democratic principles to indus-

World's Workers

A western interprovincial conference of labor is to be called early in March, the city of Calgary, B. C., having been tentatively agreed upon as the seat of the conference. The labor movements of British Columbia, Alberta, Manitoba and Saskatchewan have already expressed their sympathy with the project. It is intended that the annual convention of the British Columbia Federation of Labor be held during the first three days of the week, and the balance of the week be given over to the Western Conference.

The British Government Department of Labor Statistics reports that the number of English trade unionists at the end of 1917 was 5,287,522. In the previous year the number was 4,437,947. This includes the total membership of the 1133 trade unions known to the department. The increase in male members was 617,000, or 15.8 per cent., and in female members 233,000, or 43 per cent. The total number of female members now approximate 774,000. It is stated that some of the unions of less skilled workers have not included in their returns members in the military service.

Recent numbers of L'Humanité, of Paris, France, devote a large amount of space to the problem of unemployment in France. Unemployment is general in many of the leading industrial districts, but it is particularly serious in the districts which have been manufacturing munitions. In one issue a long article is printed commending to the French Government the Belgian example of dealing with unemployment. The minister of industry and labor in Belgium has opened a large number of employment exchanges. In case these exchanges are unable to provide work, the State grants work to the unemployed at a minimum wage of not less than 5 francs ($1.00) a day in agricultural districts and 75 centimes (15 cents) an hour in city districts. In this way, writes the editor of L'Humanité, the Belgian workers are protected against the maneuvers of those employers who use hunger as a means of reducing wages below the indispensable minimum, and also against excessive exploitation.

The British Labor Party has taken a vigorous stand in favor of having the factories and other works built by the Government during the war, retained under national control. The "London Times" in an effort to discredit this move has been urging the Government to permit the trade unions to make an experiment in guild Socialism by taking over some of these factories and managing them in competition with private industries. The "London Nation" in commenting on the situation calls attention to the fact that even should the trade unions make an effort to take over the factories and manage them, they would very easily be discredited by their failure to secure raw materials and to obtain markets. Workshop control is only a small part of modern business. The trade unions controlling the shops would be helpless in the hands of the bankers, producers of raw material and marketers of the product they created. "The Nation" warns the unions that any attempt to follow the suggestion of the "Times" is bound to fail. It further suggests that the "Times" desires this failure in order to discredit the work of the Labor Party.

Husband Again Feeling Well; Wife Happy

COLUMBUS WOMAN SAYS LAXCARIN WILL HELP ANYONE AS IT HELPED HER HUSBAND.

"My husband suffered from stomach trouble, heartburn and indigestion, for more than a year. At times he was so terribly irritated that I was actually afraid to go near him. The slightest noise, the rattling of the baby—all brought them on his feet—his nerves were simply shattered," said Mrs. Arthur Stevens of Columbus, the wife of a well known railroad conductor.

"LAXCARIN came to our attention through the newspapers, and although we were both very skeptical about its advertised merits, we have decided to try it, and now we thank God for bringing it to our attention. LAXCARIN stopped the food my husband ate from fermenting, and because he was able to digest it, it nourished him and it built him up again. LAXCARIN stopped the gas that caused heartburn and gave him a fine appetite. It has again brought his nerves around and they are in a fine shape now. He again sleeps as well as before the stomach trouble started. LAXCARIN is certainly a great medicine, and it will help every one as it helped my husband."

LAXCARIN is sold by the Laxcarin Products Co., Pittsburgh, Pa., Dept. Sent upon receipt of one dollar cash, stamps or money order.

MANUFACTURER'S NOTE — There is absolutely no secret about the formula of the Laxcarin preparation. It is made out of pure herbs, and is universally known in the Medical World.

Sold By The
LAXCARIN PRODUCTS CO.,
Dept. E-99. Pittsburgh, Pa.

Pacific Coast Marine.

Construction work on the $500,000 marine railway at the naval auxiliary station at San Diego has commenced. When completed the railway will be capable of docking destroyers, submarines and other light-draft craft.

Hercules Powder Company officials at San Diego officially announced that their ocean-going tug "Bahada" had been purchased by the Long Beach Dry Dock and Shipbuilding Company. The purchase price was $40,000.

The proposed general reduction of San Francisco Belt Line switching charges from $3.25 to $2.50 per ton, which was announced recently by the California Board of Harbor Commissioners, will become effective on March 1, according to President McCallum.

The Alaska Packers' Association, San Francisco, states in its annual report that "there has been expended for improvements and repairs to the fleet the amount of $259,557. The association now owns eight ships, eleven barks, one barkentine, three schooners and sixty-nine steamers and launches, a total of ninety-two vessels."

The San Francisco Board of Supervisors has indorsed the bill providing for municipal control of San Francisco harbor. A report approving the bill was submitted to the Board by committees on commercial development and State laws. In addition to adopting the report, the Supervisors passed a resolution urging passage of the bill by the State Legislature.

The steam yacht "Venetia," owned by John D. Spreckels, has arrived at Colon, according to cable advices. The Venetia played a conspicuous part in combating German submarines in the Mediterranean and, according to official Navy Department announcement, sunk one U-boat. The "Venetia" will be sent to Mare Island to be put back in shape for return to its owner.

Secretary Daniels is said in a despatch from Everett, Wash., to have signed contracts with the Norway Pacific Construction and Drydock Co. for building five coast guard cutters at a total cost of $3,435,000. It is expected to lay the first keel not later than March 15. The contract calls for the delivery of the vessels between December 1, 1919, and April 1, 1920.

The F. E. Booth Fish Company's new building at Meiggs Wharf, San Francisco, is rapidly nearing completion and will be used by the company as a market for the sale of fish. A feature will be the installation of tanks in which fish may be kept alive until purchased. A permanent aquarium for the display of unusual species of fish sometimes caught by the company's boats also will be installed.

The Norwegian bark "Superior," Captain K. Hansen, has been lost at sea, off the Island of Bali, at the outer end of Java, and the captain and eight members of the crew are missing, according to advices received at San Francisco. The mate and seven of the crew landed safely at Bali and reported the loss of the ship. It is possible that the missing men may be located later. The "Superior" sailed from San Francisco for Manila on August 3, and left the Philippine port December 12, loaded with 4000 bales of hemp and 1000 tons of sugar. The vessel was bound for New York.

Colonel W. H. Heuer, United States Engineer in charge of War Department projects in the Coast district, has been ordered to make a complete survey of conditions on Humboldt Bay and at Humboldt jetties, in preparation for resumption of jetty construction and channel deepening at an early date, according to word received from Congressman Clarence F. Lea, which includes assurance that the War Department is preparing to buy rock for jetty use on a large scale. It is expected that the work will furnish employment for from 400 to 500 men in all, and will result in re-opening large quarries which have been idle since jetty work was discontinued at the beginning of the war.

It is reported that Chile will appear before the Peace Conference and demand that her bankers and financiers be given title to the ninety-two interned German ships in Chile. If the demand is granted Chile will be the only country that remained neutral to collect a claim of this kind. It is intimated that the belligerent countries will claim that if the interned fleet is turned over to the banks of Chile, they will remain in the possession of Germans, for it is alleged that the banks are owned and controlled by Germans. Chile will base the claim on the ground that the banks furnished the millions needed to pay the crews and keep the ships in repair. The fleet has a aggregate tonnage of nearly 775,000 deadweight.

The new Norwegian steamer "Bonheur," 3480 tons, built for the Norway Pacific Line for operation out of San Francisco, was destroyed by a floating mine in the North Sea December 23. The vessel was struck off Coquet Island and went down in a few minutes, the crew escaping in the small boats. The "Bonheur" sailed from Christiania, December 9, for San Francisco. The Norway Pacific Line is now operating the steamer "Brazil," the motor-ship "George Washington" and other vessels from local ports, and had planned to increase this operation by adding the "Bonheur" and other ships to the fleet. The "George Washington" is the largest motor-ship afloat and is said to be the most economical ship afloat in point of operation and maintenance.

The rate on lumber via the Panama Canal has been cut from $35 to $18 per thousand foot measurement by the Shipping Board. The announcement did not create any particular interest among shipping men for there has been little or no movement of lumber from this Coast to the Atlantic. The opinion was ventured, however, that the new rate will make it possible for the British operators to get the cream of the haul on lumber from this Coast, as they will receive more than $18 a thousand for the short haul across the Atlantic. Assistant Director Ebey of the Shipping Board said that as far as he knew there was no lumber being transshipped across the Atlantic from the Eastern ports. He understood, he said, that the lumber taken from this Coast was intended for use in this country and would consist chiefly of railway ties.

Writing about the self-insurance policy of the Alaska Packers' Association, President Henry F. Fortman, in his annual report, says in part: "The association carries its own insurance on buildings, wharves, machinery, equipment, furniture and on product in the course of manufacture and finished in its own plants; also on all floating property and on cargoes of box shooks, lumber and coal. All up and down general cargoes are insured at full values, and salmon and merchandise stored in warehouses in San Francisco at about one-half their values. At the close of 1917 the fund showed a credit of $4,570,978; its interest income on investments amounted to $230,200 for the year, and, in addition, the fund was credited with $1,272,396. From the interest income a dividend of $115,016 was paid. The amount charged for dividends, leases, expenses and taxes aggregate $931,310. The insurance fund now amounts to $5,142,266."

President John H. McCallum of the Board of State Harbor Commissioners received congratulations recently from Governor Stephens because the Commission had made it possible for the State's chief executive to notify the United States Shipping Board at Washington that San Francisco had already gone ahead and taken the importers, exporters and shipping men into its confidence in the matter of looking after the interests of the port. A letter was received from Washington in which the Governor was asked to suggest to the Harbor Board the advisability of appointing an expert committee as an advisory body. Stephens answered that the local Harbor Board had not appointed this committee, but had previously appointed other special committees, and these had worked with the board on various matters during the past six months. McCallum said that he was glad that the Commission had acted before the idea was even suggested to Washington.

The Pacific Mail liner "Venezuela," which was requisitioned by the Government for the transportation of the French officers and a cargo of military supplies to Vladivostok several days ago, will not be needed for this purpose, and will be permitted to remain in the regular service between this port and the Orient, according to Harold H. Ebey, assistant director of the Shipping Board. It is understood that the United States Army transport department has solved the transportation problem and may add another transport to the service out of San Francisco. This would indicate that there is little likelihood of the "Venezuela" or any other Pacific Mail vessel now being taken from the service for the use of the Government. The vessel had been booked to capacity with freight and passengers before being requisitioned the last time, and the greater part of the travelers will reclaim their reservations and sail on the 18th. The fight put up by the Chamber of Commerce and other commercial bodies of the city is believed to be responsible for the change in the Government plans. The "Venezuela" is expected to arrive at San Francisco February 12, and is bringing a full list of passengers.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, FEBRUARY 12, 1919.

WORK OF THE CONVENTION.

The second and final installment of the Galveston convention proceedings is published in this issue.

It is only meet and proper to begin a review of the convention's work with some facts anent the numerical and divisional strength of the membership represented at the 22nd Annual conclave of the International Seamen's Union of America.

An abstract from the valuable data compiled in Secretary Hanson's report shows the 50,000 members of the International Union to be divided in the following groups:

Cooks, Stewards, Waiters, etc.	7,200
Firemen	9,600
Firemen, Oilers, Watertenders, Coal-passers, etc.	14,700
Sailors (Boatswains, Quartermasters, Able Seamen, Ordinary Seamen, etc.)	18,500
Total	50,000

A division of the membership along geographical lines shows the following interesting results:

Atlantic Coast	25,000
Great Lakes District	7,900
Pacific Coast	17,100
	50,000

Considering the well-known fact that the bulk of the International Seamen's Union membership was for years concentrated on the Pacific Coast, the foregoing figures, indicating a new geographical alignment, are highly significant and encouraging, to say the least.

It is altogether needless to say that the convention was unanimous in the adoption of several declarations making it perfectly clear that the International Union will, in the future as in the past, uphold and defend the Seamen's Act against all enemies, at home and abroad.

In close connection with this subject was the formal action of the Convention to join the International Seafarers' Federation. For many years past the International Seamen's Union of America has been affiliated with the International Transport Workers' Federation. Somehow, little if anything of permanent value was ever accomplished by the Transport Workers' Federation. At the outbreak of the war its executive officers were all in Germany and their conduct during the war has practically put the finishing touches to the Transport Workers' Federation's life and usefulness. One point, however, should be made to show an essential difference between the old Transport Workers' Federation and the new Seafarers' Federation. The Transport Workers' Federation was dominated and controlled by landsmen in the interest of workers engaged in the various transportation trades ashore. The Seafarers' Federation will be dominated and controlled by seamen for seamen.

There was a lengthy and spirited debate upon the various phases of the new international ties and upon the new obligations and duties about to be assumed. Andrew Furuseth and Havelock Wilson, President of the British Seamen's Union, had cabled the convention asking that at least one additional delegate be sent to the London conference of the International Seafarers' Federation, to be held on February 24. Many delegates favored sending three additional delegates, one each from the firemen, cooks and fishermen respectively. In the end the committee's report, providing for one additional delegate, prevailed. Andrew Furuseth and Patrick Flynn were unanimously elected to represent the organized seamen of America at said conference. The JOURNAL will keep its readers fully informed upon the doings of the London conference and on developments in the International Seafarers' Federation, generally.

The convention adopted a new policy providing for a more general dissemination of literature in all sections of the country setting forth the truth upon the Seamen's Act and the aims and objects of the organized seamen's movement from the national and international point of view. In line with this activity suitable quarters are to be established at the Nation's capital.

A determined effort is to be made for the enactment of the National Seamen's Compensation bill now pending in the United States Senate. Attorneys for the Shipping Board have suggested several modifications of the bill. Instead of making the best American Compensation laws the standard for a Seamen's Compensation law these gentlemen, evidently having in mind the shipowners' welfare first, last and all the time, propose to make the British Seamen's Compensation law the basis for an American Seamen's Compensation Act. That they will not be permitted to do so without a fight goes without saying.

Following up the old problem of securing adequate compensation for accidents the convention unanimously declared for the establishment of universal health insurance, i. e., to demand the inclusion, in laws upon this subject, of full medical care and a percentage of wages during sickness.

Better and more adequate Marine Hospital facilities on Puget Sound was again demanded and the local unions were urged to submit facts of the deplorable existing condition to the Legislative Committee.

Several resolutions pertaining exclusively to the affairs of fishermen were adopted. One of these protests against the organization of trap fishermen on Puget Sound, and in Alaska under the jurisdiction of Pile Drivers. Another resolution directed the Secretary to take the necessary steps to insure proper publicity in reply to grossly misleading advertisements appearing in a Gloucester, Mass., daily to the detriment of the Atlantic Fishermen.

A decidedly timely and pertinent resolution, favoring the transfer of U. S. Shipping Commissioners from the Department of Commerce to the Department of Labor was adopted. The JOURNAL will deal editorially with this matter in a later issue.

The Committee on Organization reported satisfactory progress in the work of organizing the Marine Cooks and Stewards on the Great Lakes. The convention therefore voted to continue the financial assistance in that direction. The issuance of separate charters during the year to the Marine Firemen and the Marine Cooks of British Columbia was approved. Finally the Executive Board was authorized to formulate a permanent working plan for the better organization of all seamen in the United States and Canada.

The amendments to the constitution adopted are of minor importance except one providing for an increase in the monthly per capita tax from 5 to 8 cents per member. For some time past it has been necessary to levy assessments upon the treasuries of affiliated unions in order to meet the heavy bills incurred in protecting and safeguarding the Seamen's rights in the Courts. This method of raising revenue has been rather unfair because District Unions with small treasuries have practically entirely escaped payment. Under the increased per capita tax it is confidently believed assessments can be entirely eliminated. Taxes will thus be equally distributed over the entire membership of the International Seamen's Union, regardless of funds in the respective treasuries.

Several recommendations by Secretary Hanson, relating in particular to the formulation and adoption of a more uniform constitution by all district unions, also to an extension of the International membership book to cooks, firemen and fishermen, were referred to a separate representative committee of five, to be appointed by the president.

As a whole the Galveston Convention dealt with all problems affecting the seafaring people in a progressive and forward-looking spirit. The utmost harmony prevailed throughout. There were only two roll calls on debated issues during the entire convention. One was on the number of delegates to be sent to Europe and the other on the selection of the next convention city. All officers, delegates and representatives were elected without opposition, which, in itself, is an indication that the delegates at the convention were determined to sidetrack all personal animosities and to center their energies against the common enemy outside the ranks.

THE SEATTLE STRIKE.

The one redeeming feature about the general "sympathetic" strike at Seattle is the fact that it ended as quickly as it started.

To anyone not on the ground it is, of course, impossible to fully comprehend all the ramifications of that ill-advised and unfortunate walkout. There have been times and occasions in the history of the American labor movement when a general sympathetic strike was not only jus-

tifiable but highly commendable. Men and women have more than once struck in sympathy when the right to organize was denied. They have walked out in sympathy with their fellow workers when attempts were made to increase the working hours or reduce wages. But a general sympathetic strike to enforce an immediate increase in wages for a certain group of workers is decidedly an untried and more than questionable method of getting results.

All that appears to have been accomplished by this wonderful flash in the pan expression of a new and self-styled revolutionary unionism seems to be a sort of dark brown taste such as follows an overindulgence in alcoholic beverages. At any rate, it is sincerely hoped that nothing more serious than the dark brown taste will develop. It is a certainty that the would-be union-busters will do their utmost to turn the Seattle fizzle to their advantage, but there need be little danger of more disastrous consequences if the workers in the great Northwest will do some earnest and serious thinking for themselves. The I. W. W. mouth revolutionists and world saviors who have infested that section of our country of late will disrupt any bona fide working class organization if permitted to freely practice their own impossible theories. And if that one solemn lesson can be driven home to the hearts and minds of the great rank and file then this unhappy and misdirected manifestation of working class solidarity in Seattle has not been entirely in vain.

FACTS ON SHIPBUILDING.

A correspondent challenges the accuracy of the figures published in last week's editorial under the caption "Our Wooden Ships."

The JOURNAL asserted that the Shipping Board originally contemplated building some eight hundred wooden ships but that only about ninety had been completed. The figures quoted refer only to vessels built for the Shipping Board and are believed to be substantially correct.

Since the publication of the before mentioned data Mr. Piez, Director-General of the United States Shipping Board Emergency Fleet Corporation, has furnished the United States Senate with official figures showing that the total output of American shipyards for the calendar year 1918 was as follows:

410 steel vessels of.....	2,570,077	tons d. w.
10 composite ships of.....	37,500	" "
106 wooden ships of.....	376,400	" "
Total 526	2,983,977	" "

The above figures represent ships actually delivered during the year 1918 and should be supplemented by the following returns also furnished by Mr. Piez:

	Number	Tons D. W.	State of Completion	Equivalent in Completed Tonnage
Vessels Delivered	526	2,983,977	100%	2,983,977
Launched but not Delivered	287	1,222,873	80%	978,298
On the ways.....	391	1,939,225	33⅓%	646,108
Work done on Ships Begun in 1917	391	1,908,735		115,372
Total				5,054,055

The foregoing official figures on the "total" output of American shipyards would seem to indicate that the JOURNAL did not stray very far from the actual facts in asserting that only about ninety wooden ships had been actually completed for the Shipping Board.

RIGHTS OF INJURED SEAMAN.

Jury Finds Master Guilty of Negligence in Caring for Injured Seaman and Awards $2500 in Damages.

Editor Seamen's Journal:

Below is copy of charge in the case of Antonio Leone, tried before a jury in the Supreme Court, Kings County, New York. The jury brought in a verdict of $2500.00 for personal injuries and suffering sustained by plaintiff, a member of the crew of the S. S. "Bonifice" of the Booth Steamship Line, through the negligence of the captain and physician on board, in failing to send the man to a hospital at Barbadoes, four days after the accident.

The evidence indicated that he was suffering a dislocated shoulder from the time of the accident, four or five days out of New York, until his arrival to the United States, just two and one-half months later. His arm was reset at the Long Island College Hospital.

The X-ray plates taken at the hospital mysteriously disappeared. Fortunately I had sent him to the New York Hospital for examination and treatment and their records were available. The verdict of $2500.00 was none too large under the circumstances.

The case is remarkable in that the plaintiff's testimony on the trial was unsubstantiated, except that I was able, as attorney for the man, to develop certain inconsistencies in the testimony of the three officers and physician who were arraigned against him. The disappearance of the hospital records which would have proven that the dislocation existed at the end of the voyage, figured materially in the finding of the jury. In many ways this is an important case.

Yours very truly,
S. B. AXTELL.

SUPREME COURT, KINGS COUNTY.
Trial Term, Part V.

Antonio Leone, Plaintiff, vs. Booth Steamship Company, Ltd., Defendant.

Tried before Hon. Stephen Callaghan, and a Jury, Brooklyn, N. Y., December 11th and 12th, 1918.

Appearances: Silas B. Axtell, Esq., Attorney for Plaintiff; Haight Sanford & Smith, Esqs., (Henry M. Hewitt, Esq., of Counsel), Attorneys for Defendant.

Callaghan, J.:

Gentlemen: It very often happens, in the trial of a lawsuit, that in the light of subsequent events, a great deal of testimony taken has nothing to do with the case as it is finally submitted to the jury, and that is true of this case. Here I have allowed testimony, which, in the final analysis has nothing whatever to do with the proposition which I shall submit to you for your consideration. I have taken out of this case the question of whether or not the defendant was responsible for this accident, and it does not matter how it occurred, that is not for your consideration. I have taken away from you the first cause of action, which alleges negligence on the part of the Steamship Company in sending this man aloft to do some work, and I have taken away from you any question as to whether or not the Doctor was guilty of what we know as malpractice, in other words, a failure to properly diagnose and treat this case, because the Doctor is a man of some experience, of middle age, or past, and was thoroughly competent to discharge his duties as a physician on board this vessel. So that no liability can be predicated here for anything which the Doctor did in his failure to properly diagnose or treat this case. So we come down to this one proposition, and that is the only point which you may consider in this case. Should those in charge of this vessel, acting as reasonably prudent men, have sent this man to a hospital in Barbadoes, or in one of the South American ports, for the purpose of having his condition diagnosed, so that they might be able to properly treat him?

The law places upon a steamship company or in other words it places upon the captain, or those in charge of a steamship, the duty of properly looking after its passengers and crew. In this case the man was a member of the crew, and had he been sick at sea, the duty would have been upon this Steamship Company, or the captain, to see that he got proper care and proper medical aid, and if they did not have a doctor on board, it was the duty of the steamship captain to put into port, under certain circumstances. Of course that has nothing to do with this case. But the point that I am trying to make clear to you is the duty which those in charge of the ship owed to this man, and then say whether or not they discharged that duty. The Doctor frankly tells you that he did not know of this fracture of what has been called the upper tuberosity, that he did not know for sure that this condition existed, (although he says he suspected it), until he saw the X-ray in the Long Island College Hospital in Brooklyn. The testimony shows that this man continued to suffer for a long time, two months and a half I believe it was, from the time of this accident until he got final relief by an operation

(Continued on Page 11.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Feb. 10, 1919.

Regular weekly meeting came to order at 7 p. m., F. Buryesen presiding. Secretary reported shipping quiet; many members ashore.

The Ballot Committee reported the following having been elected officers for the ensuing term: Treasurer, Ed. Andersen; Secretary, Andrew Furuseth; Assistant Secretary, John H. Tennison; First Patrolman, E. A. Erickson; Second Patrolman, C. F. Larsen; Third Patrolman, W. Bastion; Victoria, B. C., Agent, J. Etchells; Vancouver, B. C., Agent W. G. Millard; Tacoma Agent, H. L. Petterson; Seattle Agent, P. B. Gill; Seattle Patrolman, John Andersen; Aberdeen Agent, Ed. Rosenberg; Portland Agent, Jack Rosen; San Pedro Agent, Harry Ohlsen; Honolulu Agent, Jack Edwardson; Editor The Seamen's Journal, Paul Scharrenberg; Business Manager, S. A. Silver.

The following were elected to represent the Union in the San Francisco Labor Council and Waterfront Workers' Federation, respectively:

Delegates San Francisco Labor Council: Ed. Andersen, W. Bastion, E. A. Erickson, W. H. C. Hansen, C. G. Larsen, C. F. May, D. W. Paul, Paul Scharrenberg, S. A. Silver and John H. Tennison.

Delegates Waterfront Workers' Federation: Joe Faltus, C. G. Larsen and Paul Scharrenberg.

Trustees Maritime Hall Association: Ed. Andersen, E. A. Erickson, C. G. Larsen, D. W. Paul and John H. Tennison.

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., Feb. 3, 1919.

No meeting; shipping slow; members scarce.

J. ETCHELLS, Agent.

Room 11, de Cosmos Block, 1424 Government Street.

Vancouver, B. C., Feb. 3, 1919.

Shipping slack

W. G. MILLARD, Agent.

58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, Feb. 3, 1919.

No meeting. Shipping and prospects medium.

H. L. PETTERSON, Agent.

2016 North 30th St. Tel. Main 808.

Seattle Agency, Feb. 3, 1919.

Shipping dull.

P. B. GILL, Agent.

84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, Feb. 3, 1919.

Shipping fair; prospects poor.

ED. ROSENBERG, Agent.

P. O. Box 280. Tel. Main 557.

Portland Agency, Feb. 3, 1919.

Shipping fair; prospects uncertain.

JACK ROSEN, Agent.

88½ Third Street. Tel. Main 6013.

San Pedro Agency, Feb. 3, 1919.

Shipping fair.

HARRY OHLSEN, Agent.

128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, Jan. 27, 1919.

Shipping poor; prospects poor.

JACK EDWARDSON, Agent.

P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Feb. 8, 1919.

Regular meeting of the Marine Cooks was called to order at 7 p. m., T. McGlinchey in the chair. Secretary reported shipping fair.

E. F. BURKE, Secretary pro tem.

42 Market Street Phone Kearny 5955.

DIED.

Carl Andersen, No. 716, a native of Norway, age 51. Died at San Francisco, Cal., Feb. 10, 1919.

Knut A. Petterson, No. 1567, a native of Sweden, age 26. Died in the wreck of S. S. "Geo. Loomis," December, 1918.

Armas Puntti, No. 1466, a native of Finland, age 31. Died at San Francisco, Cal., Feb. 4, 1919.

A. W. Rosenquist, No. 19, a native of Finland, age 56. Died at San Francisco, Cal., Feb. 10, 1919.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Secretary of Labor Wilson went before a joint meeting of the Senate and House Committees on Labor and urged that the Kelly bill, appropriating $500,000,000 for the Government development of land, minerals and water power on the public domain, and the Kenyon bill, appropriating $100,000,000 for immediate starting of work on roads and other public improvements, should be promptly passed. This was his answer to the question, "What shall Congress do to meet the unemployment danger?"

Secretary Wilson told the Committee that Congress must act promptly and constructively if the "philosophy of force" were not to be spread broadcast over the country by the impatience of the unemployed. There need be no serious trouble, he explained, if the big projects contained in those two bills were started, and good wages were offered to all men who want jobs and are not afraid of hard work.

To prevent workingmen from listening to the I. W. W. doctrines, and to prevent such unrest in industrial cities as might make necessary the use of force in their suppression, the Secretary thought, Congress must show a determination to provide employment. There would be no social revolution if there were industrial prosperity for the wage workers.

In support of the Secretary's testimony two facts should be stated here: As compared with 11,114 unemployed men, reported from twelve cities on November 30, there were this week 262,000 unemployed reported from 123 cities. Where there were seventy-four cities reporting a balance between labor and jobs on November 30, on January 18 there were only forty-nine cities in which such a balance existed. That is the first fact. The second is that a veteran ex-member of the Executive Council of the American Federation of Labor has returned from a visit to some fifteen or twenty industrial centers, and has reported to the Government that the rank and file of the labor movement is likely at any moment to forget the discipline of the various international unions and to take the industrial law into its own hands. Apparently this collapse of union morale is due partly to the rapid increase in unemployment and partly, also, to the failure of the National War Labor Board to make awards in hundreds of the cases that have been submitted to it.

As a result of this report upon the possibility of strikes throughout the country, it is said that the Cabinet this week became alarmed, and discussed the wisdom of cabling to President Wilson a suggestion that he take hold of the situation.

Complaints against the failure of the War Labor Board to handle the cases brought to it are increasing. Matters came to a head yesterday, when it was shown that the section of the Board made up of Wilkinson of the United Mine Workers and C. E. Michael, a St. Louis employer, had almost a score of disputes in their care, and none of them ready for award. Some of these cases dated back to last July and August. It is charged that Guerin of the Carpenters and Rickert of the United Garment Workers are taking the same course as Wilkinson and the five employers—slowing up the machinery or stalling it altogether. The complaints are to the effect that if the members of either side of the Board do not want to make awards they ought to quit and come out in public and declare their opposition to this plan of settlement of disputes. Then the workers in any dispute will know where they stand, and will fight their own battles.

The Board has voted to instruct Wilkinson and Michaels to proceed with their cases and to bring in awards.

Delegates from the local unions of the International Union of Mine, Mill and Smelter Workers in the copper camps of Montana, Utah and Arizona have been in conference with the Secretary of Labor, trying to find some way of meeting the unemployment conditions in that industry. Copper production was stimulated, during the war, by fixing the price at 26 cents a pound. The war ended much sooner than the copper profiteers thought would be the case. They promptly began discharging their men, until now some 30,000 or 35,000 of the 125,000 men in the industry have been dismissed. To add to the trouble, great numbers of discharged soldiers have flocked to the copper camps, expecting to find good jobs in the mines. Instead, they finds crowds of idle and resentful men, and discover that the bosses are still reducing their forces.

Thus far, all has been orderly enough. True, the Phelps-Dodge copper combine made an average profit, for the three years before the war, of $7,448,399, and it made a war profit of $21,974, 263, which would have made it possible to set aside $14,500,000 of excess profits with which to meet its taxes and also pay wages this year and next year regardless of the copper market. But that's not business. Anyhow, the National Security League has got quite a lot of those profits, for its "educational campaign" in favor of State Constabulary, compulsory universal military training, and so forth. The vice-president of Phelps-Dodge gave $10,000 to the National Security League on July 12, 1917—a few days after the Phelps-Dodge officials in Bisbee had kidnaped and deported 1,200 miners.

That Arizona end of the copper business is further muddled by Senator Ashurst, who loudly endorsed the Bisbee deportations, but who knows little about the copper market. At a meeting in Baltimore the other night, Ashurst wound up a speech by pledging that he would never endorse the re-opening of trade with Germany. Now copper has dropped to 19 cents, and there is a surplus waiting to be absorbed or exported. Germany, before the war, used to be our biggest buyer of copper. Treasury officials are urging that trade with Germany be restored, so that we can take up the slack in the copper industry. But Ashurst of Arizona is just getting interested, orally, in the war, and until his Phelps-Dodge friends take him in hand the mines in Arizona will continue to lay off men.

An agent of the Government who went to England to study the educational side of the labor movement, and who made a trip to France before returning, is now writing a report on his investigations. He looked into the Labor College, which is maintained in London by two of the biggest trade unions—the South Wales Miners and the Railwaymen—and the Plebs' League, which is the organization of young men who have passed through the one-year course of training in this school for labor organizers. He found that there are thousands of college-trained men in England who are conducting classes of workingmen, two or three nights each week, teaching them economics and working-class history and trade union tactics. There are thousands of these highly trained men in the big industrial centers, constantly talking economics and industrial history and industrial politics to their fellow workers. Upon this basis of labor-movement education the great British labor movement is growing and developing its power. The new system of shop committees, which has been described as a "bloodless revolution" in Britain, is one of the results of the demand of these schooled trade unionists for direct control of shop affairs.

All accounts of the strike in Belfast, in Scotland, in Wales and in London agree upon one point—the national officers of the unions have been defied by the locals or by the shop committees, exactly as has been the case in some of the metal trades strikes in this country. It is not so much industrial unionism as local mass action, brushing aside all jurisdictional lines for the time being. The decision of the Mooney convention to try to secure a nation-wide general strike on July 4 for the release of Mooney and Billings does not follow the example set by the British, because the Mooney strike is to be neither local nor in conflict with the laws of the several international trade unions. Strikes on the British model are threatening, however, in most of the big industrial centers.

Seattle's shipyard strike, with its promise of a general sympathetic walkout, has created a good deal of uneasiness in Government departments here. The plan of Director Piez of the Emergency Fleet Corporation to create a lockout in answer to the strike is not endorsed very warmly. A Seattle shipyard owner, here this week, discussed with friends the possibility of starting a strike in the yards on the Atlantic Coast, to "equalize conditions" and force the Fleet Corporation to find a real solution to the problem in the West. When conditions drift to a danger point, Piez will probably cable to President Wilson for instructions. Meantime the War Labor Board field agents are going to visit the Pacific Coast and report informally on the grievances of the strikers.

At a discussion of what to do in order to eliminate or reduce the rabbit pest in New Zealand, a member of the New Zealand Council of Agriculture mentioned an area in the Auckland district of some 70,000 acres which carried, on a low estimate, 350,000 rabbits. Inasmuch as ten rabbits will eat and destroy as much pasture as would feed one sheep, it was pointed out that these rabbits had destroyed the feed which might have kept 35,000 sheep worth $127,746 a year to the country. Rabbits are being slaughtered by the millions and their skins prepared for export, of which the United States has taken very large numbers during the last year. A large number of rabbits are also being placed in cold storage awaiting shipment to Europe.

THE TRUTH ABOUT RUSSIA.

Despite the tremendous barrage of lying regarding Russia and the alleged instability of the Soviet Government, the truth is beginning to be admitted by the enemies of Russia. Ever since the ascendency of the Soviets to control, correspondents have assured their readers in Allied countries that the fall of the Soviets and their leaders was a matter of only a few weeks. Weeks passed, and the event was postponed to another week, only to be repeated from week to week down to the present moment. The "wish was father to the thought," and there was nothing more substantial to these stories than this wish.

The Paris correspondent of the New York "Times" now admits that the Soviet Government is more firmly planted in Russia than ever, and in this he is confirmed by a "French business man" and a "high official at the Russian Embassy." The Frenchman is quoted as naively saying: "What no one here in France seems to understand is that Bolshevism is based on a new idea—the idea of the supremacy of the under dog—just as the French revolution was based on the idea of the rights of man and democratic freedom from despots. By this idea Bolshevism has a powerful appeal to the masses, to the shiftless and ignorant, to the exploited section of humanity."

Now, it so happens that the French revolution also represented the under dog, but that animal at that time was the nascent capitalist and trading class held down by the old feudal regime. That revolution is glorified to-day. The Russian revolution represents a new under dog, the "masses, the exploited section of humanity," and it is hated by the exploiting classes in all countries. It is true that it has its percentage of the "ignorant," also—ignorant because of lack of opportunity under the capitalist regime. But there are few of the "shiftless" to be found in the Russian revolutionary movement or the Socialist movement anywhere else. These shiftless ones always serve as the shock troops of Tammany, of reactionary intrigue, of capitalist imperialism, just because they are the aimless dregs of society, without aims of their own.

But the truth is seeping through the high wall of censorship surrounding Russia, as this dispatch indicates. We think it the glory of the Russian revolution that it represents the disinherited, the "exploited section of humanity." We believe that it carries a message of more importance to the peoples of the world than any that could be sent to them by the ruling statesmen of any other country.

It also is a matter of rejoicing that it now is being admitted by the enemies of Soviet Russia that the Russian Government is growing stronger and becoming more stable every day. There is additional testimony to this in the numerous statements of interventionists that, if a large army is not sent soon, the Soviet Government will become so strong as to be impregnable. It is an admission that waiting for the expected fall of the Soviets is so much moonshine; that they must be overthrown and policed by foreign armies if they are to be permanently abolished. Revolutionary Russia is vindicated out of the mouths of some of her most irreconcilable enemies, though their strength owes nothing to these sinister forces that have tried everything to restore an old and hated regime.—New York Call.

LINCOLN'S BIRTHDAY.

The anniversary of Abraham Lincoln's birthday on this day (February 12) brings to mind Lincoln's sentiments in regard to labor, and their application at the present time.

Lincoln adhered closely to the idea that industry and intelligent economy form the basis of prosperity. Although his administration offered no such profitable method of saving as the present-day War Savings Stamps and other Government securities, the principles of advancement enunciated by Lincoln could very well be part of the "wise buying," "intelligent saving," and "safe investment" which are the chief features of the Government's 1919 thrift campaign. Lincoln said:

"The prudent penniless beginner in the world labors for wages awhile, saves a surplus with which to buy land or tools for himself, then labors for himself another while, and at length hires another beginner to help him. This is the just and generous and prosperous system which opens the way to all, gives hope to all, and consequent energy to progress and improvement of condition to all."

This was not theorizing. Lincoln was no stranger to labor. It was his closest companion during the greater part of his life, and it is safe to say that he performed well more kinds of hard manual work than falls usually to the lot of man.

When Lincoln was being acclaimed a nominee for President in 1860, the most notable contribution made to the State convention of Illinois was a curious banner composed of two weather-worn fence rails, decorated with bags and streamers, and bearing the inscription:

FOR PRESIDENT IN 1860.

The Rail Candidate

Two rails from a lot of 3,000 made in 1830 by Thos. Hanks and Abe Lincoln—whose father was the first pioneer of Macon County.

Following the storm of applause which greeted the banner, Lincoln arose, and, pointing to the banner, said: "I cannot say whether I made those rails or not, but I am quite sure I have made a great many just as good."

Later on, when Lincoln was in the White House, he always pointed with pride to the days when he did a hired man's work, and told many a story about his rail-splitting, ploughing, lumbering, boating or store keeping. He never failed to pay tribute to that "most important incident in my life, when by honest work, I earned my first dollar."

Lincoln lived in the first half of the nineteenth century, but were he here in the first half of the twentieth, he could not more fittingly interpret the personal and patriotic need for industry, frugality and investment in profitable War Savings Stamps and Liberty Bonds than by repeating:

"What is that we hold most dear? Our own liberty and prosperity."

COMPENSATION MAKES GAINS.

Despite severe competition by private casualty companies, the California state insurance fund for workmen's compensation has made conspicuous gains during the past year, according to the annual report just issued by the State Industrial Accident Commission.

The State fund shows an increase of about 80 per cent over the business of 1917. It then wrote 24 per cent. of California's total compensation business, or $1,300,000 in premium income, while the estimated premium income for 1918 is $2,500,000.

The expense ratio of the State fund, exclusive of the 2 per cent. tax, has been reduced from 15 per cent. in 1915 to 10 per cent. in 1918, and to date a total of $578,000 has been refunded to policy-holders in dividends. The average expense ratio of commercial companies throughout the United States is 40 per cent.

This showing is stimulating the demand, voiced by organized labor in eighteen States, for the complete exclusion of private companies from the field of workmen's compensation business. Recent experiences in States having exclusive State funds for workmen's insurance, notably in Ohio, it is being pointed out, has proved that millions of dollars are saved each year in industry and that more liberal benefits are made possible for injured workers and their families when private profits are forbidden in casualty insurance.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.
2. Free schools, free text books and compulsory education.
3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.
4. A work day of not more than eight hours in the twenty-four hour day.
5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.
6. Release from employment one day in seven.
7. The abolition of the contract system on public work.
8. The municipal ownership of public utilities.
9. The abolition of the sweat-shop system.
10. Sanitary inspection of factory, workshop, mine and home.
11. Liability of employers for injury to body or loss of life.
12. The nationalization of telegraph and telephone.
13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.
14. Woman suffrage co-equal with man-suffrage.
15. Suitable and plentiful playgrounds for children in all cities.
16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.
17. Continued agitation for the public bath system in all cities.
18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.
19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

try. They have proved themselves in government. Is it not reasonable to suppose that they will prove equally applicable to industry?

Labor can not longer be regarded as a commodity, which, like rubber and wheat, can be stored on the shelf or in the bin in slack season for times of greater demand. Working men and women are living souls—hungry in times of famine as in times of plenty—and they have come to realize that they are souls, and not merchandise, and must be treated accordingly.

"Every business must in times of plenty provide an insurance fund for times of famine, and every business must govern all of its members by the consent of the governed."

Fears More Profiteering.

Testifying before a Senate Committee, Walter L. Fisher declared that "prices would bump the ceiling" when the Food Administration ceases to function, if the Government does not take from the packers control of the private cars, stock yards and terminal refrigerator plants. The witness appeared as attorney for a live stock association. He said that the extreme profiteering would not only raise prices for the consumer but it would reduce production as stock raisers would hasten to sell even breeding animals to get a share of the temporary high prices.

Active in Minnesota.

The executive council of the Minnesota State Federation of Labor has mapped out a program of vigorous activity, which includes the following:

Every effort should be made to secure State controlled compensation insurance in this State and the chairman of the Ohio State Industrial Commission will be asked to address the Minnesota Legislature on the operation of State insurance there.

Organize employes of the steel trust on the Mesaba ore range.

Co-operate with all forces in the State who stand for better government, and confer with employers on labor legislation.

Government ownership of railroads, telegraph and telephones was endorsed.

Duncan Favors Unity.

James Duncan, President of the Granite Cutters' International Association and First Vice President of the American Federation of Labor, declares for an amalgamation of the stone trades unions in the current issue of the Stone Cutters' Journal. He says "there can be no question" but that this course is advisable.

Many viewpoints are being expressed by organized stone cutters on this question and President Duncan says these details would entail endless argument. He says the one queston before the membership is, "Shall we amalgamate?" and that "all of the other side issues raised by the granite cutters are for future determination, should the membership of the stone trades first decide to amalgamate."

It must not be assumed that the child who receives its only education while tending a machine will necessarily develop a machine-like obedience to driving power.

STABILITY.

Reconstruction to be effective must be based upon sound economic facts.

Briefly, that is the position of the United States Department of Labor in promoting building, an industry that was stopped during the war, one that is necessary to the progress of the country, adding to its wealth and its taxable resources. Every new building erected helps society in various ways. When carried on in a large way—nationally, for instance—the building industry sets in motion all other industries. Thus at this time it is the chief naural source for the useful employment of the labor which during the war was engaged in war work and presents means for absorbing the soldiers mustered out of the nation's service.

Building, then, besides being useful, necessary and beneficial, in a measure assumes a patriotic aspect. Love of country means more than mere shouting for victory, cheering heroes and saluting the flag. It means work for the good of the country, for the peace and prosperity of the people and for the maintenance of order.

These conditions cannot prevail if the people are idle. Idleness will produce industrial unrest; that, in turn, will arouse discontent, and discontent breeds revolution.

Revolution wipes out order, reason, reverence, sentiment—everything that is sacred falls before revolution. The goal of revolution is attained at that point when its fury is spent. There it stops. Out of its debris may come good, may rise some noble principle, may develop a great power exercised with benevolence. But that no man can direct, for revolution is not to be controlled. It surges, sways, sweeps on without heed of the sorrow, the hardships, the suffering that is left in the path of the storm.

Revolution is a human cyclone propelled by madness.

Hunger and misery are the parents of revolution, but when hunger is appeased and misery assuaged they cannot check their wayward child. Revolution destroys. It is irresponsible because it recognizes no authority.

The power of the people lies in order, in generous consideration, in sympathetic understanding and in conservative action. A nation built upon these principles is fortified against revolution. They are the forces which arrest destruction. Industry sustains them.

Reconstruction, then, must be founded upon industry.

Employment of men merely to give them something to do without producing things that will be useful or without adding to the world's wealth is wasteful.

Building supplies the means for the useful exercise of industry, adding to the wealth of the world and bringing happiness to the people.

The Department of Labor has chosen wisely its road to prosperity. The nation will profit by its foresight.

Exemption was granted in England to a man named Beardsley, who is the owner, manager, and only employee of a coal mine near Matlock. He mines twenty to twenty-five tons of coal weekly, and last year his output was 1000 tons.

Demand the union label upon all purchases!

TRADE WARS.

In 1888 France and Italy engaged in a trade war. For two years each country applied retaliatory duties against the other, and then for eight years further each country applied its maximum duties to imports from the other. Both suffered seriously. By the end of the decade Italian imports to France had declined 57 per cent., and French exports to Italy showed a decrease of fully 50 per cent.

More serious was the trade war between France and Switzerland in the early 'nineties. This war lasted for two and a half years. France applied to Swiss goods her maximum rates, which were approximately 40 per cent. higher than her minimum rates. Switzerland in turn applied to French goods punitive duties ranging upward to 150 per cent. The Swiss also, by changes in railway rates, assisted in diverting their Marseilles business to Genoa, their Havre and Dunkirk trade to Antwerp and Rotterdam, and the whole of their transatlantic silk trade to England via Belgium and Holland. In addition they canceled their literary convention with France, which meant not only a serious financial loss to her, but the diminishing of French cultural influence, to the advantage of German thought and literature.

France's losses in this trade war were heavy. The diversion of Swiss commerce to other countries lost to her millions of francs in railway receipts, ocean freight, and commissions. Austria, Italy and the United States gained at her expense in the sugar trade; Spain in the wine trade; Italy in the silk trade; Germany and Belgium in metal goods; and the United States in leather. Germany received half of the trade lost by France in ready-made clothing and one-third of that lost in woolen goods. Not until seven years after the close of the trade war did French exports to Switzerland equal again the exports of the normal years before the trade war.

History is conclusively against trade wars. Insofar as the Paris resolutions and the plans for the economic union of Central Europe provide for the use of the economic weapon as a war measure, they are legitimate supplements to military operations. It is when they go beyond this and contemplate organized trade warfare after peace is declared that they become dangerous. The very conception of such plans has made it clear that the military struggle must go on to a point where all problems can be settled at the peace conference. They constitute a warning against an inconclusive peace. They lead to the conviction that a permanent peace can be achieved only after a decision in the field. If we can look forward only to a bitter trade conflict after hostilities cease, with the Allies on one side and the central empires on the other, we may expect that conflict to culminate in a second world war.—William S. Culbertson, in the Century Magazine.

The early closing of stores makes for the earlier opening of the rational era in the lives of the store workers.

The reduction of the hours of labor increases production by virtue of the law that demand increases supply.

RIGHTS OF INJURED SEAMAN.

(Continued from Page 7.)

or treatment at the Long Island College Hospital. And it is said by him that he demanded of the captain of the steamship that he be sent to a hospital for treatment. His demand or request that he be sent to a hopsital does not necessarily require that the captain should grant it, because a captain is charged with the responsibility of carrying on his vessel in the interest of the commerce of the country, and in the interest of the owners, and he is only required to do what a reasonably prudent man would have done under all the circumstances So in this case concededly this man asked the captain at Barbadoes if he might go to a hospital. The question for you to determine is whether or not the captain acted as a reasonably prudent man in not sending this man to the hospital at Barbadoes. or when they got to South America. The testimony shows that this ship made half a dozen calls at different ports in Brazil, and the plaintiff claims that he then requested to be sent to a hospital. At any rate he did not go to the hospital. And it is assigned here as a reason for not sending him to the hospital that the British Consul advised, in one instance, that it would be extremely dangerous for him to remain in that port. Upon all the testimony it comes back to the proposition which I laid down to you before: Did those in charge of the ship discharge their full duty towards the plaintiff? If you find that they did. that ends the case, and your verdict would be for the defendant. If you find that they did not, you will then seek to determine just what pain this man suffered. You understand that you cannot pay him for the injury which he suffered by reason of the fall, or any injury which he suffered if he had had the treatment, say for instance of an X-ray, or suffering which he had in the regular course, had this fracture been properly diagnosed and treated, from the beginning. but all you may pay him for is the unnecessary and the continuing suffering which he had as a result of the failure of those in charge of the steamship to send him to a hospital for examination. There is no direct testimony here that there was an X-ray apparatus at Barbadoes or at any of the hospitals in the South American ports. but you heard the testimony of the Doctor that they are in general use, and it is for you to say, whether or not one could have been found in those hospitals, and an X-ray taken of this man's arm, so as to disclose the exact condition. I will leave that for you to determine.

If you find that the plaintiff is entitled to a recovery, you come to the question which is somewhat difficult of solution, because it is pretty hard to say just what pain and suffering was caused to this man, or in other words, what unnecessary or continuing pain he suffered because of the failure of the captain to do his duty. You have heard the testimony what the doctors say about it, you know the condition of his arm during all this time, and you should be able to determine just what it was. When you determine that, you will pay this man such a sum of money as he is entitled to.

You are not to be influenced in this action by anything that has been said about this defendant being a corporation or that the plaintiff has certain rights. We recognize the rights of the plaintiff, and of course, at the same time, we recognize the rights of the defendant. When we come to the point that cases are to be decided upon sympathy, or upon any such talk as was made to you by the plaintiff's counsel in this case, then we get into a very dangerous situation because when we come to the time that cases cannot be decided fairly and squarely as between an individual and a corporation, or between one individual and another, without regard to sympathy or prejudice, I say when that times comes. it is a very dangerous place for us to live, and I should not want to be here, and I don't want you gentlemen to be biased or influenced in the slightest by any such talk as that.

You are just as much a part of this court as I am, and it is just as much your duty to decide this case, and all other cases, upon the testimony, free from any outside influence, as it is for me to discharge any official duty which may develop upon my shoulders.

Our law says that the burden is upon the plaintiff to prove, by fair preponderance of the evidence, that is believable evidence, which weighs down in his favor, first, that there was a failure of duty on the part of those in charge of the ship, and, secondly, that there was unnecessary or continuing pain suffered and endured by the plaintiff as a result of that failure.

All we are interested in here is to have you render a fair verdict as between these parties, and say by your verdict where the justice and the truth lies as between them.

By Mr. Axtell: I want to take an exception to your Honor's remarks to the plaintiff's counsel, during the summing-up of this case, cutting in on my time.

The Court: What do you mean by that?

By Mr. Axtell: I had two minutes to go, according to Mr. Hewitt's time, when your Honor said, "Let me address the jury." I hadn't finished

The Court: I hardly know how to characterize such a statement as that, because you know it is false. I did not fix your time or limit your time.

By Mr. Hewitt: Your Honor said we could have unlimited time.

By Mr. Axtell: The record shows the jury are re-called.

The Court: Let the record further show that what the Court referred to in its charge was a statement made by you that this defendant was a large Steamship Company owning millions of steamships, and that this man was a poor, plain man, having nothing but his body, and he was seeking his rights. That is what you said.

By Mr. Axtell: That is not the portion of your Honor's charge that I except to.

The Court: That is the portion that I referred to.

By Mr. Axtell: At the end of my address your Honor cut me short, and did not permit me to finish my address to the jury. On that ground I except.

The Court: That is a false statement.

By Mr. Axtell: I ask the Court to charge the jury that the plaintiff can recover damages and indemnity for any extra pain and suffering that may have been caused to him through cruel and inhuman treatment on the part of the master of the ship by reason of the said master or officers requiring him to perform work which he was not in fit physical condition to do.

The Court: If they acted as reasonably prudent men would have acted, I so charge.

By Mr. Axtell: I ask the Court to further charge the jury that the master of the vessel, and the officers, were there acting for the master, or any other person to whom he delegates his power and authority or duty, represents the owner in its duty to furnish to an injured seaman prompt and proper medical care and attention, or hospital services, if required and that the owner must respond in damages for any neglect of that duty upon his part.

The Court: That may be true as an abstract or general proposition, but it does not cover the facts in this case as finally submitted to the jury, and I refuse to charge in the language of the request.

By Mr. Axtell: Exception.

ARE WAGES A GIFT?

(By James M. Lynch.)

"There is no gratitude in them." This assertion was recently made by a manufacturer discussing his employes. "I voluntarily raised one man's wages; he had been with me for years at the same weekly rate, and I made the increase on my own motion, without request from him. Going through the factory the other day, I was stopped by this man. Of course, I thought he wanted to thank me. Nothing of the kind: he told me the increase was not enough. I tell you, there is no gratitude in them, no matter what you do for them."

This set me thinking. What prompted the employe to express for the first time in years his wage aspirations? Did the unsolicited and long-deferred increase in wages break the bonds of fear that economic isolation brings to the unorganized wage earner? Was there the sudden outburst of pent-up resentment against a condition of servitude that precluded any voice, direct or indirect, in the sale of labor and time?

Gratitude may be unfettered or slavish; it may be the natural expression of a free wage earner, or the hypocritical and expectant fawning of the unorganized toiler protected only by his mythical if legal "right of contract." Organized wage earners are self-reliantly grateful; they are appreciative of their hard-won right of collective bargaining; they are conscious of their gains through mass action.

To organized toilers wages are not a gift.

Beer is believed to be one of the most ancient of drinks. Manuscripts written at least 3000 years before the Christian era show conclusively that even at that primitive period the manufacture of an intoxicating liquor from barley or other grain was extensively carried on in Europe.

Labor News

To correct such contradictory laws as exist in Texas and other places, where a mother's pension law enables children to attend school up to 16, while educational laws permit them to leave school at 12, seventeen States of the Union, the National Child Labor Committee announces, are taking steps for the codification of all child labor laws in unity with each other.

President Wilson has signed the bill empowering departmental heads to provide transportation home for discharged war employees. The bill was passed by Congress and then forwarded to France for the President's signature. Many officials have taken it for granted that the President would sign the bill and have been carrying out the purposes of the act before it became a law.

The Brotherhood Railway Car Men of America reports a membership of 173,235 on the first of the year. "Ours is the largest railroad organization in America." said President Ryan, who declares the car men "have just struck their stride." "We have raised wages, shortened hours, improved conditions and developed a lasting trade union morale among the men in our calling," he said.

According to reports of the National Child Labor Committee, there has been a vast increase in the labor of children under 14 years of age during the past two years, and they call attention to the fact that it will be harder for boys and girls to go back to school than it was to leave school for industry. Even if the situation assumes a pre-war status there would still be at least two million child-workers in America.

Prohibition of immigration for four years after the war, except natives from Cuba, Mexico, Canada and Newfoundland, has been agreed to by the House immigration committee. The American Federation of Labor supported the measure on the theory of "America first," and that there are a sufficient number of foreigners in this country that should be assimilated. The present labor surplus was also used with effect by the trade unionists and other advocates of this measure.

The appointment of Miss Ethel E. Tulloch of San Diego, California, as fifth vice-president of the National Federation of Post Office Employees, is announced by the Federation from its national headquarters in Washington. This is the first time in the history of the postal employees' organization in America that a woman has been made a member of a governing board, and this appointment comes as recognition of the increasing number of women who have entered the postal service in recent months.

Wage increases of 5 and 10 per cent. to all employes of telegraph systems under Government control have been announced by Postmaster General Burleson. The 5 per cent. applies to employes who have been in the service continuously for six months and not more than one and one-half years. The 10 per cent. applies to employes who have been in the service continuously for more than one and one-half years. These rates shall not apply to premium rates nor to premium earnings and the advance cannot raise wages more than $200 a month.

INFORMATION WANTED.

Members of the crew of the steam schooner "Florence Olsen" who signed articles at New York on September 15, 1918, for a voyage to Central America and return, and who were on board said schooner at the time she salved the steam schooner "Claremont" near the Tucker Islands, off the coast of Nicaragua, on October 31, 1918, and towed her into Christobal, will kindly communicate with Silas B. Axtell, 1 Broadway, New York City. 12-25-18

When making purchases from our advertisers, always mention The Seamen's Journal.

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted
La Follette's Magazine, Madison, Wis.

Home News

Senator Lawrence Y. Sherman of Illinois, Republican, intends to retire from public life when his present term in the Senate expires March 3, 1921. Senator Sherman's health, particularly an increasing deafness, is understood to be the reason for his decision.

Josephus Daniels' "biggest Navy" program was bitterly attacked by Senator Borah, who charged that, while in theory the Government has great plans for universal peace and brotherhood, "in practice it still apparently is following the rules of kings and autocrats."

The name of the next war loan will be "the Victory Liberty Loan," Secretary Glass has announced. The exact date in the spring when it is to be floated has not been fixed. The honor flag of the loan will bear a blue "V" on a white field surrounded by a red border, the "V" indicating both five and victory.

There is no immediate hope of an appreciable reduction of food prices, according to Sylvan L. Stix, president of the Wholesale Grocers' Association, in addressing the annual convention of that body. Stix declared food prices probably will never revert to the old standard. One reason was the increased production of gold.

Pleas to Congress for Government economy are threatening the administration's large naval program. Several big fleet advocates on the House Naval Committee are wavering because of letters from constituents who oppose extensive naval construction on the sole ground that it would increase the already large federal taxes.

Financial losses and in some cases, ruin for telephone companies, was predicted by W. H. Lamar, solicitor of the Postoffice Department and member of the Wire Control Committee, unless Government operation of the wire systems was extended for at least two or three years to permit a general reconstruction of rates and restoration of normal conditions.

A national congress for a league of nations will be held during February under the auspices of the League to Enforce Peace and its State branches. The congress will consist of nine conventions to be held in nine cities. The Pacific Coast congress will be held in San Francisco February 19 and 20. William H. Taft, president of the league, will preside and speak at each convention.

Lewis B. Franklin, director of war loan organization for the United States, while in San Francisco said the coming Liberty Victory Loan will be the last. Although the rate of interest and exemption features of the loan are not known, Franklin said it is generally agreed that the bonds will be of short maturity and that the size of the loan will be as large as the fourth which was for $6,000,000,000.

Vilhjalmar Stefansson, the Norwegian Arctic explorer, was awarded the Hubbard gold medal by the National Geographic Society for his achievements during the last five and a half years in which he reduced the unknown Polar regions of the Western Hemisphere by approximately 100,000 square miles. His was the largest contribution to the geography of hitherto unknown areas for many years.

Listen to Good Advice

Every day you hear instructions in regards to precautions to be taken in order to ward off the dreaded Spanish Influenza, also as to what to do if the Flu has already attacked your system.

USE A GOOD STOMACH CLEANER AND BOWEL REGULATOR IN CASE OF SPANISH INFLUENZA

Keep therefore always at hand the most Ideal of Stomach and Blood Cleaners, and the best of Laxatives known.

USE
LAXCARIN

STOMACH AND BLOOD CLEANSER TABLETS which quickly cleans the stomach, the bowels, and besides it helps the digesting organs in performing its duties, it produces a good appetite, and regulates the stomach.

Substitutes Must Be Refused

Domestic and Naval

Fifteen hundred Mare Island sailors have been ordered East to help man German ships which will be used as transports to return American troops from France. Recruits will replace the men leaving the island.

Supercargoes will be recruited by the Navy Department for duty aboard all Government-owned vessels of the merchant marine. The officers will report to the Shipping Board the performance of each vessel on each voyage.

The Chicago, Rock Island & Pacific Railway Company has acquired a half interest in the Trinity & Brazos Valley Railway. The transaction involves the payment of approximately $4,000,000 by the Rock Island, which will have a permanent outlet to the Gulf ports.

The American Bridge Company has received an order from the United States Railroad Administration for twenty-five all-steel barges, to be operated on the Mississippi River between St. Louis and New Orleans. The specifications call for barges 230x45x11 feet, with a capacity of 1400 tons on 7 feet draft.

Under an executive order signed by the President, January 7, 1919, vessels purchased by the Navy during the war may be sold to their former owners at their appraised value. Should the former owners not desire to regain possession of their vessels or decline to pay the appraised value, it is directed that the vessels be advertised for sale by auction.

According to a report from Norfolk, Va., the Norfolk Hampton Roads Dry Dock and Ship Repair Corporation will install a shipyard at Lamberts Point on a tract of 160 acres, of which forty acres is on high ground. There will be a water frontage of 2900 feet. It is said that work will begin before March 1 and is expected to be completed by September. The plans contemplate two floating dry docks and the total capital investment will be about $7,500,000.

Orders have been issued to the higher naval officers making important assignments among which are: Vice-Admiral Henry B. Wilson, to command squadron 4, division H, Atlantic fleet; Rear-Admiral Wm. R. Shoemaker, to command division 3, Atlantic fleet; Rear-Admiral Harry Huse, to command training of the Atlantic fleet; Rear-Admiral Chas. P. Plunkett, to command destroyer force and flotilla No. 1; Rear-Admiral Alexander Halstead, to command naval forces in France; Capt. Edw. L. Beach, to be commandant of Mare Island Navy Yard.

According to a statement made by Mr. Charles Piez, Vice-President of the Emergency Fleet Corporation, before the Senate Committee on Commerce last week, the cost of construction of the first Hog Island ship was $2,427,000, which works out at about $323.60 per ton deadweight, as the "Quisconck" has a capacity of 7500 tons deadweight. These figures are believed in shipbuilding circles to be below the actual cost, and estimates made by practical men in touch with the conditions which existed at Hog Island before the signing of the armistice vary all the way between $350 and $400 per ton deadweight.

NAVIGATION INSTITUTE OF NEW ENGLAND
CAPT. JOSEPH T. DRAKE
Superintendent.
(Former Hull Inspector and Examiner at Boston, Mass.)
This Institute has been established to assist seamen to obtain licenses as officers of merchant vessels. All of our students are successful, there being no failures when passing for examination before the United States Steamboat Inspection Service. Our methods of instruction are evidently pre-eminent in securing highest possible license for eligible candidates. Tuition Fee very reasonable.
A Catalog and further information furnished on request.
Rooms 301-305 ADAMS BUILDING
9 Doane Street BOSTON, MASS.

INFORMATION WANTED.

Hans Meyer, member of the Sailors' Union of the Pacific, who was last seen in Honolulu, T. H., on Feb. 17, 1914, is inquired for. Any one knowing his whereabouts, please notify Henry Capell, 51 South St., New York N. Y.—5-29-18

Members of the crew of the SS "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

Members of the crew of the SS. "Kellogg" who were on board when she picked up the SS. "Catania" can obtain money due them for salvage services by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City 10-16-18

When making purchases from our advertisers, always mention The Seamen's Journal.

INFORMATION WANTED.

A libel has been filed on behalf of the following officers and members of the crew of the steam-schooner "Florence Olsen" against the owners of the steam-schooner "Claremont" and the owners of the cargo, arising out of the salvage services performed by the "Florence Olsen" to the "Claremont" on or about the 31st day of October, 1918, off the coast of Nicaragua: George Muceneck, E. Kemfield, H. Julius, G. J. Borman, H. Nelson, Thomas C. Baird, S. A. Alm, Gaston Karlson, John Demliz, John Behrin, A. Von Sohendel, H. Hofstra, W. Christiansen, C. Anderson. The members of the crew who have not yet filed their claims with the undersigned can be joined by co-libelants' petition. An adjustment of this salvage claim is expected very shortly and no time should be lost in filing claims. S. B. Axtell, Proctor for Libelants, 1 Broadway, New York City.

Members of the crew of the S. S. "St. Charles," which salvaged the S. S. "Tea" in 1917, who have not yet filed with me their claim for their share of the salvage money, should do so as soon as possible, as the case will come up for trial in a very short time.

ISIDORE A. RABINOW,
Attorney for Seamen.
277 Broadway, Room 401, New York City. 1-1-'19

News from Abroad

The belief is expressed in French official circles that the preliminaries for peace will be finished and ready for submission to the French Chamber between March 15 and March 31.

The municipality of Copenhagen intends to use about 35 acres of the property it owns near the city for the growing of vegetables for their municipal kitchens and other institutions.

London is trying out 100 policewomen, uniformed and assigned to beats as are the men. They are sworn in as constables and their particular duty is to assist others of their sex.

Of the American soldiers taken prisoner by the Germans on the western front only a single one now remains in Germany. He is at Stuttgart, too ill to be removed at present.

All plants employing more than ten hands in Bavaria are closed for lack of coal and the employes are receiving 90 per cent. of their wages from the State. Thousands of soldiers are out of work.

Co-operation in Belgium has made progress in spite of the war. Since 1914 the society "Vorwit" has gained more than 5000 members, and hundreds more would have enrolled if in 1918 "the National Food Committee had allowed persons to choose their baker."

The North German Gazette reports an American syndicate has bought the Schichau shipbuilding yards, one of the most important in Germany, for 100,000,000 marks ($49,000,000). The Schichau works built the famous cruiser-raider "Emden" and the "Hessen Albert."

Fear that Prussia may be able to put through a form of government for new Germany at the coming National Assembly at Weimar which will enable her to dominate the new nation as she dominated the old empire, may lead to a serious division between the delegates from north and south Germany.

Count von Bernstorff denied the charge published in American newspapers that he had financed Francisco Villa's banditry in northern Mexico. "I never in my life had anything to do, directly or indirectly with Villa," he declared. "It is one of the many fake stories invented about me to create anti-German sentiment."

According to reports received from Moscow, the "International Communist Congress" there has decided to convoke the first congress of "a new revolutionary internationale." The Communist Congress, it is stated, has drafted a manifesto setting forth a program based upon the program of the German Spartacus party and the Russian Communist and Bolshevik parties.

There is a notable movement of settlers toward the rich agricultural regions of Mindanao, for the vast expansion in the values of agricultural products brought about by war conditions has given rise to unusual interest in the agricultural possibilities of the Philippines in general and to those of the island of Mindanao in particular, as on that island lies much of the best hemp and copra land of the archipelago. In the occupation of this agricultural land of Davao, the Japanese, in recent years, have led all other nationalities.

With the Wits

"Your landlady cuts things a trifle short, doesn't she?"

"Somewhat. About twice what she serves would be a half-portion."—Louisville Courier-Journal.

Mrs. Riley—Are yez on callin' terms wid our neighbor?

Mrs. Murphy—Oi am that. She called me a thafe an' Oi called her another.—Boston Transcript.

"Is it very risky going out in a canoe?"

"Not so very," replied the summer girl. "You can get some good practice in a hammock."—Kansas City Journal.

He—Mr. Cadby refused to recognize me to-day. Thinks, I suppose, that I am not his equal.

She—Ridiculous! Of course you are. Why, he's nothing but a conceited idiot.—Boston Transcript.

"You ask for my daughter? What are your prospects, young man? Do you own the house you live in?"

"No, I rent it, but I have five tons of coal in the cellar."

"Take her."—Louisville Courier-Journal.

"Why do you keep referring to Von Ananias? There is no such person mentioned in the Bible."

"I put the 'Von' in myself. The name of the original mendacity expert should be Germanized as much as possible."—Washington Star.

Tommy—Smokin' cigarettes hurts ya. Pop told me so.

Jimmy—Aw, he was jest stringin' ya.

Tommy—No, he wasn't stringin' me, either; he was strappin' me. That's how I know it hurts.—Boston Transcript.

Mabel—That fish looks like trout. I'm very fond of trout. I wonder if it is trout.

Norma—Why don't you ask the chef?

Mabel (to the chef, sweetly)—What kind of fish is that?

Chef—That is fried fish, ma'am.—Judge.

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Horace R. Taylor — Henry Taylor

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 24. SAN FRANCISCO, WEDNESDAY, FEBRUARY 19, 1919. Whole No. 2526.

WHY "A LEAGUE OF NATIONS"?

Frank P. Walsh Supplies a Logical Answer

Few men in public life have a higher standing among the working people of America than Frank P. Walsh, recently joint chairman of the National War Labor Board.

Mr. Walsh has asked the Journal to help in this greatest crisis of history to marshal public opinion behind America's real purpose in the war. The Journal gladly responds by publishing herewith Mr. Walsh's own views on the subject.

It is obvious that agreements made at the Peace Conference will, for generations to come, vitally affect for good or ill the economic, political and moral wellbeing of mankind. The creation there of a League of Free Nations can alone insure the orderly development of the world and preserve peace. To get such a league President Wilson wisely decided, by personal attendance, to throw his great influence on the side of an unselfish and righteous peace, with a League of Nations to safeguard it perpetually.

A successful League of Nations depends absolutely upon the vigor and enthusiasm put behind the demand by the common citizenship of America. The sad figure of Abraham Lincoln arose on the field of Gettysburg, in the darkest days of our nation, revivified the spirit of American people, and filled their hearts with courage and hope by the declaration that those sacred lives given in defense of the Union had not been sacrificed in vain, but that there was to be a new birth of freedom under God so that a government of the people, by the people and for the people should not perish from the earth.

Might we not to-day, standing at the open graves of the yet unnumbered dead of the American Army in the bosom of beautiful France, likewise declare that their splendid lives were not given in vain, but that the entire world was to have a new birth of freedom under God, so that the blessings of democracy, as breathed into the Declaration of Independence by our forefathers, carried into the Constitution of the United States, and made abiding law by the love, veneration and customs of our people for a century and a half, should be extended to the darkest corners of the earth; that out of the European holocaust should rise a league of nations, inspired by the same ideals, having for its loftiest and most inspirational conception the declaration that there shall be no more autocrats and no more wars.

A few muddled statesmen and timorous Americans are using the words of the immortal Washington to combat this splendid idea of a league of nations, demanding that there be no "entangling alliances" with Europe. Who established any such alliances, as far as this war is concerned? An autocratic power, running wild in a bloody effort for world control, set aside all high ideals and attempted to shatter the finest thought of the modern world.

Hypocritically crying out that they were engaged in a war of defense, the Central Powers violated solemn treaty obligations, assailed with violence unprotected peoples and destroyed countless lives. They set out, in the name of war, upon a system of atrocities viler than anything which had ever yet entered the imagination of the darkest and most despotic minds, became pirates, and worse, upon the high seas, destroyed the lives of innocent men and women, and even infants, and so far as our country is concerned, boldly attempted to enter into negotiations with other countries, to the end that our sacred soil should be invaded, the lives of our people destroyed, and our territory parceled out to victorious vandals.

To prevent this crime, thousands of American lives were offered and billions in treasure poured out, to force victory to the allied arms in Europe.

If this means an "entangling alliance," let any American, in or out of the Congress of the United States, step forward now and say that our country was not right in entering the war.

It is not conceivable that under the guise of a league of nations, an international state can be set up which in a congress, court of arbitration, or any forum whatsoever, could restrain one single ideal, or set aside one principle of America's Declaration of Independence, the Constitution of our country which sprang from it, or the laws, habits and customs of our people, justified by a century and a half of experience, and finding deeper lodgment in the judgment and hearts of mankind than ever before in the history of the world.

With this as a fundamental conception, I say that all the advances in thought of all the nations of the earth; all of our common education, our art, science and literature, mean nothing and we still are as naked savages, with the thinnest veneer of hypocrisy covering our stark ugliness, unless out of this awesome slaughter and bloodshed can come a confraternity of men and women, speaking the unanimous voice of all the peoples of the world, and agreeing upon principles not of internal government nor national statesmanship, nor even international polity, but which shall be based upon the single object—the abolition of war.

I would not essay to speak for workers in America or elsewhere. The mighty problem which confronts Europe, as far as its industrial state is concerned, is a weighty one and still in the seething caldron of agitation and violence. It must be settled quickly and upon the basis of justice, if their forms of civilization are to endure.

That the industrial situation in our own beloved land at the present moment is of monumental concern to the integrity of the very existence of our state, no sane person can deny. But I cannot conceive that we will not weather the storms and that the good old ship will not faithfully sail past the rocks of reconstruction through the channels of equity and justice.

The workers of our nation, with the co-operation of enlightened employers, and, if need be, the firm assistance and hearty co-operation of the States and the nation, will be the exemplar to all the world in happy adjustments of industrial conditions.

The sudden change from a great industrial nation at war, working its prodigious limit in the production of war essentials, to a great, peaceful agricultural and industrial nation, was bound to bring severe shocks. The leaders of our nation, political, professional and scientific, as well as those governing the agencies by which our industrial and commercial life is animated, understand that there must be, but only temporarily I hope, a large body of unemployed. It is vital to the larger hope of the nation, to the peace of the future in industry, that the employers should not permit that situation to depress wages, lengthen hours of labor or to exact working conditions intolerable in the slightest degree. Othewise they will mar the fine adjustments necessary to the carrying on of their own business evenly and profitably.

The wise and broad view will allow labor to keep up its onward march to the plateau of absolute industrial justice. It will speed up the operation of peace industries, which even now are crying aloud for expression, activity and normal life. In a very short while, prudent and far-seeing counsel in industry would find the United States embarked on an era of prosperity, not only for the few but for all, unparalleled in our business life.

The workers, of all others, are interested in a just and effective league of nations, which will insure the abolition of war for all time. The burden of war falls most heavily upon them. They comprise the great masses of the population in all countries. Their children are fed into the horrible maw of the war monster in numbers of colossal immensity. Their property is the first to be destroyed and the last to be restored. From them the blood of sacrifice after war will flow the longest, and upon their wearied shoulders the pains and burden of reconstruction will fall the hardest and be the most enduring.

The workers of America stand as one man for a league of nations which will preserve every American ideal, yet will be strong enough to dictate, by force if need be, good conduct on the part of any participant nation which may hereafter exhibit the hideous war lust. It should teach obedience to principles that will make that nation fit to live as a constituent part of a society refined to a conception of the highest aspirations of a newer and more ideal civilization.

STIRRING UP MEXICO.

The Pan-American Federation of Labor, at a meeting of its advisory committee just held in New York, has launched an attack upon the proposal of United States Senator Ashurst, of Arizona, to purchase part of Mexico from the Mexican Government.

"Senator Ashurst's bill calls for the purchase from Mexico of Lower California and the richest part of Sonora," says the committee's declaration. "This bill is a mere blind to cover other intentions because the Senator well knows that an attempt on the part of any Mexican official or body of officials to sell any part of Mexico to the United States would cause Mexicans to rise in arms."

It was said that Senator Ashurst has oshwn a reckless disregard of the temper of the Mexican people to the scheme. Asked on the floor of the Senate whether this scheme would not result in an uprising by the Mexican people, Senator Ashurst is reported to have answered: "Oh, well, what is one revolution more or less in Mexico?"

The Ashurst bill is viewed by the committee as only one of the indications of a drive by internationally allied capital for the exploitation of weaker nations. The committee, representing the labor organizations of a majority of the Latin American republics, issued a call urging immediate action in order to co-operate effectively with the labor movements of Europe now making a new world for the workers.

The committee declared that "the capitalistic wealth of the world is now concentrating in the United States, and this overwhelming power of private wealth is even now commencing a campaign which, if unchecked, will end in armed intervention in the Latin American republics and the forcing of the workers of the republics into war.

"Mexico is the first point of attack and, as all Latin America knows, what is done to Mexico will eventually be done to all Latin America.

"In the Congress of the United States Senator Ashurst's bill calls for the purchase from Mexico of Lower California and the richest part of Sonora. This bill is a mere blind to cover other intentions because the Senator well knows that an attempt on the part of any Mexican official or body of officials to sell any part of Mexico to the United States would cause Mexicans to rise in arms.

"Claims against Mexico for alleged acts during the last revolution are being pushed in the United States Congress, claims from citizens of the United States and England, alone, estimated at a total of three hundred million dollars in gold. Three hundred millions more are the estimated value of the claims for damages against Mexico coming from other foreign nations.

"To purchase the claims of the foreign capitalists now contesting for the petroleum deposits in Mexico—the natural resources of the nation as set forth in the Mexican Constitution and inherited by the nation from the Spanish dominion—it is estimated that Mexico would have to pay the sum of four hundred millions of dollars.

"One billion dollars in claims, the total of all these capitalist demands, the people of Mexico cannot pay, a fact well known to these same capitalists who have another concealed purpose, namely, to force the revision and abrogation of those parts of Mexico's Constitution which proclaim for the workers a national eight-hour day, the right of the workers to organize and strike, the protection of women and children in industry and scores of other labor laws the most liberal yet devised in the Western Hemisphere. These labor laws and those parts of the Mexican Constitution which proclaim the right of the nation to the ownership of petroleum and minerals is a standing menace to the imperialistic plans of the capitalists of the United States who are now working openly for the conquest of Mexico and Latin America by economic pressure, if possible, but by arms if necessary.

"All this is against the welfare and peace of the workers of Pan-America and therefore the advisory committee of the Pan-American Federation of Labor calls upon the representative labor organization of every Pan-American Republic to immediately elect its delegates to the Pan-American Federation of Labor Congress to be held in New York City on July 7, 1919, in order that we may get into communication with them.

"Our brothers of the labor movements in Europe are to-day uniting. A united labor movement of the Western Hemisphere must meet and unite with the labor movement of the Eastern Hemisphere.

"JOHN MURRAY,
"CANUTO A. VARGAS,
"Secretaries of the Pan-American Federation of Labor.

"LUIS N. MORONES,
"Secretary-General of the Confederation Regional Obrera Mexicana."

THE PRESIDENT'S DESK.

The story of President Wilson's desk at the White House is told by a London newspaper. It recalls such a happy little incident in the past relations of the United States and Great Britain that it is quite worth giving once again. In 1852, H. M. S. "Resolute" was sent to the Arctic in search of Franklin, but, getting into difficulties, she was abandoned by her crew. Three years later an American whaler extricated and towed the ship into port. The "Resolute" was then purchased and refitted by the United States Government and sent to England, by President Franklin Pierce, as a token of good-will and friendship.

Some little time afterward, being past service, the "Resolute" was broken up in Plymouth dockyard, and from her timbers Queen Victoria had a desk made, which she sent to President Buchanan as a memorial of "the courtesy and loving kindness" which had prompted his predecessor to send the vessel back to England. The desk has ever since been the one used by successive Presidents of the United States for their official correspondence.

The new courts of law established by the British in the occupied portions of Palestine do all in their power to harmonize their decisions in accordance with the ancient Jewish law. This is especially noticeable in cases of inheritance and wills, where the Jewish law is frequently resorted to in the decision of cases.

THE DOOM OF EMPIRES.

With thrones and crowns in all parts of Europe scattered in the whirlwind of revolution, and other thrones still standing only because the ermined occupants, under the wise guidance of responsible statesmen, have bowed their royal heads to the demands of democracy, it is interesting to run across the words of Colonel Robert Ingersoll, spoken over thirty years ago. "The Doom of Empires" was the theme of Ingersoll's remarks, and he said:

"The traveler standing amid the ruins of ancient cities and empires, seeing on every side the fallen cellar and prostrate wall, asks, Why did these cities fall? Why did these empires crumble? And the ghost of the past, the wisdom of ages, answers: These temples, these palaces, these cities, the ruins of which you stand upon, were built by tyranny and injustice. The hands that built them were unpaid. The back that bore the burdens also bore the marks of the lash. They were built by slaves to satisfy the vanity and ambition of thieves and robbers. For these reasons they are dust.

"Their civilization was a lie. Their laws merely regulated robbery and established theft. They bought and sold the bodies and souls of men, and the mournful wind of desolation, sighing amid their crumbling ruins, is a voice of prophetic warning to those who would repeat the infamous experiment, uttering the great truth: that no nation founded upon slavery either of body or mind can stand.

"When I take into consideration the poverty, the anxiety, the tears, the agony of civilized life, the failure, the withered hopes, the bitter realities, the hunger, the crime, the humiliation and the shame, I am almost forced to say that cannibalism after all is the most merciful form of which man ever lived upon his fellowmen. It is impossible for a man with a good heart to be satisfied with this world as it is now. No man can truly enjoy even what he knows to be his own, knowing that millions of his fellowmen are in misery and want. When we think of the famished we feel that it is almost heartless to eat; to meet the ragged and shivering makes one almost ashamed to be well dressed and warm. One feels as though his heart was as cold as their bodies.

"In a country filled with millions and millions of acres of land waiting to be tilled, where one man can raise the food for hundreds, millions are on the edge of famine. Who can comprehend the stupidity at the bottom of this truth? Is there to be no change? Is the law of supply, invention and science, monopoly and competition, capital and legislation, always to be the enemies of those who toil?

It may be all right to give the devil his due, but it is not all right for a union man to give his money to a non-union employer. Buy union-labeled goods and there will be no non-union employers.

The view of the majority is always right, since it alone can be put into practice. The view of the minority can never be more than a theory incapable of demonstration.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Railroad Piece Work Is Doomed.

Before his retirement, by resignation, from the railroad administration, Director General of Railroads McAdoo ordered all regional directors to discontinue piece work in railroad shops "whenever a substantial majority of the employes desire such a change."

"It is important," continued the Director General, "that this matter be handled without delay or hesitation and with a sympathetic purpose to carry out fully the spirit of these instructions. Please see that all officials concerned are properly and promptly advised so that they may act without delay as occasions arise."

The railroad executive was undoubtedly influenced by the organized shop men's agitation against piece work and is in line with his policy to develop a harmonious spirit among these workers, rather than engender ill feeling between them and the management.

As the matter now stands, piece work will be abolished if the men so elect. Officers of the American Federation of Labor Railway Employes' Department, which represents the shop men, say that piece work will be overwhelmingly rejected, and in some cases unanimously. They base this prediction on the result of a referendum now being taken on this question by the department.

Acting President Jewell and Secretary-Treasurer Scott, of the Railway Employes' Department, both declare that this is one of the biggest gains railroad workers have ever made.

"For twenty-five years," they say, "shop men have opposed piece work. This was behind strikes on the New York Central, Erie, Pennsylvania and numerous other railroads."

The unionists point to their latest victory as additional evidence in favor of trade union organization and continuous agitation.

Employers Develop Bolshevik Spirit.

In answer to a request for "literature or articles to combat bolshevism among workingmen," A. F. of L. Secretary Frank Morrison made this reply:

"The only literature or articles issued from this office are in advocacy of the principles of trade unionism.

"I believe that the principal cause for social unrest in our country is the attitude of conscienceless greed as represented by certain large employers of labor who refuse a living wage, insist on long hours and deny their employes the right to join a lawful organization in an effort to improve their working conditions.

"Nothing can develop a mob spirit in this country quicker than the anti-union attitude of the Steel Trust, for instance. This corporation, through its control of small municipalities in western Pennsylvania, has made free assemblage impossible in these communities by closing every hall to their workers. The same principle is applied by the Steel Trust on the Minnesota iron ore range, in the Northwest lumber industry, and other employers of labor who seem to be guided in social questions by the attitude of so-called 'big business.'

"As force begets force the mob spirit of the employer is met by the mob spirit of the employe. The development of this spirit is logical when it is considered that because these workers are not permitted to act collectively through trade unions they possess no knowledge of the orderly development or the value of public opinion as a remedy for wrongs. This public opinion can only be developed through organization, agitation and education, which the American Federation of Labor so insistently calls for."

His Visit No Small Honor.

"President Wilson represents the world's greatest civilized community," the Manchester Guardian said in commenting on the visit of the American executive to England.

"President Wilson's visit is no small honor," the paper declared. "He represents the world's greatest civilized community. He stands for the might of a great ideal. For a moral purpose which is stronger than armies. His supreme object, his fixed purpose, is turning the victory to the best account.

"We can make the best return for his aid to the alliance by helping. He is a good fighter and has some of the world's big forces with him."

Union Telephone Girl Quits Federal Board.

Miss Julia S. O'Connor of Boston has forwarded to Postmaster-General Burleson her resignation as a member of the committee appointed by him to investigate wages and working conditions of employes of telephone and telegraph companies.

Miss O'Connor is president of the telephone operators' division of the International Brotherhood of Electrical Workers, and in her letter to the postal chief she hits straight from the shoulder in regulation trade union fashion. She informs Mr. Burleson that to retain membership on his committee "would amount to a serious betrayal of the rights and interests of my fellow workers, whom you charged me to represent." She says the committee meetings have been infrequent, it has no avowed policy, its one consistency "has been hostility to the organized telephone and telegraph workers," and that its refusal to avail itself of the information, advice and assistance of the organized workers has reduced it to a condition of impotency.

The Postoffice Department is charged with repudiating agreements and "discrimination is employed that is unparalleled under private control," while low wages are referred to as a "disgraceful exploitation" that should "challenge the concern and attention of all persons interested in American standards of life."

Because the Postoffice Department has not disavowed discrimination and a denial of rights supposed to be enjoyed by citizens employed by the Government, "the odium of this state of affairs," she says,

World's Workers

The British labor party has been officially recognized as the opposition party in the British House of Commons, and succeeds to all the privileges which that entails.

An agreement has been reached between the leaders of the Swedish Railway Workers' union and the council of direction of the railways, according to which an eight-hour day is installed in all the workshops of the state railways, beginning January 2, 1919.

Chinese laborers who have been employed in munition factories and on public works in Northern France during the war period are being returned to China. This action is taken in order to relieve the serious unemployment situation that now exists. All Chinese workers now in this part of the country will be sent back to China as soon as transportation can be provided.

Although often referred to as a saddler and tanner, Herr Ebert, Germany's socialistic president, is really a journalist. In his early days he was apprenticed to a harnessmaker, but at the age of twenty-one he became the editor of a Socialist newspaper, his articles in which attracted much attention. He is said to be a keen debater and clever parliamentarian, and has great influence among the organized workers of Germany.

The Scottish Conference of the Independent Labor Party, held during the first week in January, decided to organize a daily press of its own throughout Scotland. The Christian Science Monitor reports J. Ramsay MacDonald as saying: "The Labor Party must have a daily press of their own in London, Glasgow and elsewhere." He said that before many weeks they would have a daily paper in London, and he predicted that at the next election they must have 560 instead of 360 candidates, and contest practically every seat in the country. Mr. MacDonald stated that there was city after city in Scotland which the Independent Labor Party would win directly the coalition began to break up, and a little more educational work had been done. The Independent Labor Party has made considerable advance in Scotland since 1910.

There are parts of Australia that are still in the grip of landlordism. A dispatch in the "Maoriland Worker" describes the conditions in these words: "From Tenui to Akitea there is a stretch of country extending over forty miles owned or in the possession of a few men. The class of men they employ is such that the only school now open is at Akitea, and the attendance is ten children. There are stations whose owners will not employ a married man, partly because a married man wants enough wages to keep his family and partly because to accommodate a married man more accommodation will be required. This expense the squatter avoids and herds his men in hovels like swine, building wooden bunks side by side, and, in some cases, to save space, in tiers one above the others. It seems to me that the country which, in the hands of the squatter, cannot support families, should be taken from them and cut up into closer settlement. From Whakataki to Akitea no land has ever seen the plough though much of it, if in the hands of small men, would produce fine crops and give much employment."

Mothers!

AN APPEAL FOR YOUR CHILDREN

Look back at your childhood days.
Remember the physic that mother insisted on—castor oil, salts or cathartics.
How you hated them. How you fought them. How you dreaded their after-affects.
That was all wrong, but then nobody knew better.

With our children it's different.
The day of harsh physics is over.
We don't force the bowels now; we coax them.
We have no dreaded after-effects.
And the dose is a candy tablet.

Mothers who cling to the old form of physic simply don't know what they do.
The children's revolt is well-founded.
Their tender bowels are harmed by them.
The modern way is to give a gentle laxative more frequently. To keep the bowels always active.
The best method is LAXCARIN.

LAXCARIN is a candy tablet.
Children love their pleasant taste.
Give LAXCARIN, then don't worry—they never disappoint.

Pacific Coast Marine.

The 600-foot tower at the Naval Radio Station at South San Francisho was damaged during the week by fire, caused by a short circuit 300 feet from the ground. Owing to the height of the tower, which is on the summit of a hill, it was impossible to play water on the blaze. Several sailors attached to the station went up into the tower with fire extinguishers, but were driven back by the intense heat. Naval officials say the station's wireless service will be crippled for several months.

Orders were received at Portland, Ore., from the United States Shipping Board to stop work on the last five 9500-ton steel vessels contracted for by the Government and being built in the yards of the G. M. Standifer Construction Corporation. It is expected work later will be ordered continued on some of the vessels when the amount of material on hand is reported upon. Officials of the shipyard believe the Government may intend to have a larger type of carrier built.

Captain E. L. Whitney of Mobile, who has purchased several Pacific Coast sailing ships during the last eighteen months, has returned to San Francisco. The last purchase he contracted for was the "Espada," from the Pacific Freighters Company. The schooner was wrecked two days after the contract. Whitney said he is not anxious to purchase any more ships at present, because he expects the price to drop to nearly a pre-war basis in a short time. He also said that he is quite sure that a number of windjammers soon will adorn the mud of Oakland Creek. Local ship brokers do not agree with him, but the captain said that is because they wish to sell him a vessel.

The San Francisco Chamber of Commerce has gone on record opposing Senate Bill 94, containing provisions for the transfer of the San Francisco water front from the State of California to the City and County of San Francisco. The official statement of position was promulgated by the maritime and harbor affairs committee of the chamber. According to Robert N. Lynch, general manager, the view of the chamber is that charter amendments, in which all interests would be protected, should be made before the Legislature is called upon to act in the premises. In the meantime appropriate amendments could be proposed and adopted for ratification at the same legislative session at which the action could be taken providing for city control.

Following the receipt of advices from Washington that the Shipping Board would establish a school to teach young men foreign and domestic commerce at the Georgetown University, shipping men at San Francisco have suggested to Director of Operations John H. Rosseter that a similar school be established there. Assistant Director of Operations Harold Ebey said that he believed the Pacific Coast should be considered, and, that as Washington is so far away, it would be well to have a department of foreign and domestic commerce established at the University of California. The plan was originated by Rosseter, and suggests the acceptance of the plan utilized in the old days of shipping, when the head office was known as the counting-house and all of the experts of the organization were drafted from the ships.

Captain Robert Dollar has been appointed by the Chinese Government to direct the purchase in this country of more than $10,000,000 worth of machinery, steel products and shipyard supplies needed by China to fulfill her contract for the building of eight freighters for the United States Shipping Board. The vessels, which will have a tonnage of 10,000 each, will cost approximately $2,000,000 each and are being constructed by the Kang Yang Iron and Steel Company, a Chinese Government-owned plant at Shanghai. Contracts for these vessels were signed in Washington last July by representatives of the Shipping Board and by Captain Dollar, who at that time signed on behalf of the Chinese republic. Four keels are to be laid at a time, and the contract calls for delivery of the new ships complete by next December. John A. McGregor, Pacific Coast representative of the Bethlehem Shipbuilding Corporation, Limited, is now in the Orient overseeing details.

Pouring of concrete in the hulls of the two 7500-ton concrete oil tankers at the yards of the Pacific Marine and Construction Company at San Diego was started on February 15. The vessels, the largest concrete craft in the world, will be launched in April. Each of the ships will contain approximately 300,000 square feet of lumber. This takes into account only the timber that actually comes in contact with the concrete. The total amount of reinforcing steel used in each ship is 1600 tons. The ships will be 430 feet in length between perpendiculars, 54 feet beam, and will have an oil-carrying capacity of 70,000 barrels stored in eighteen transverse and longitudinal bulkheads. Between the cofferdam and the forward cargo oil tank will be space for carrying several hundred tons of dry cargo. Propulsion will be furnished by 2800 horsepower triple expansion engines, giving a speed of ten and a half knots an hour. The ships will be completely outfitted at San Diego.

Net earnings of the Matson Navigation Company for 1918, as shown in the annual report submitted at the stockholders' meeting during the past week, were $1,354,736.41. This compares with a net profit for 1917, before Federal taxes, of $2,396,129. The company paid $709,440 in dividends last year, twelve regular monthly and two extra dividends having been distributed. The surplus account for last year makes the following showing: Balance, January 1, 1918, $4,176,073.41; depreciation, disallowed, $197,-934.29; profit and loss, December 31, 1918, $1,354,736.41. Total, $5,728,744.11. All retiring directors and officers, headed by President E. D. Tenny, were re-elected. The balance sheet as of December 31, 1918, shows assets of $15,038,-472, of which sum $4,503,847 is carried as the valuation of the company's seven steamers and four other vessels. Net earnings from operation of these vessels last year amounted to $4,493,717. The balance sheet also shows reserve for taxes amounting to $2,700,000 and a balance to surplus at the end of the year of $4,337,620.

A mysterious wreck of a sailing vessel, believed to be that of the ill-fated bark "Helen W. Almy," which foundered off the Golden Gate during the early Klondike rush, has been located by Captain Young of the Booth fishing trawler "Ithuna." In attempting to raise the huge otter net from the bottom, forty-six fathoms deep, the gear caught in the rigging of the sunken craft and in the bits of wreckage raised it is believed that the identity of the craft has been disclosed. The hulk was found seven and a half miles southeast of Point Reyes and nearly due north of the North Farrallon. The foundering of the "Almy" was one of the grim disasters that attended the rush to the Klondike and resulted in the death of fifty men, including the crew. The vessel had lain in Oakland creek for years and, according to old-timers along the water front, was not fit to go to sea. She was shifted from the mud and liberally daubed with new paint and presented an appearance attractive enough to induce forty goldseekers to engage passage on the 500-ton ship. Despite a terrific storm raging outside, and although the bar was breaking badly, Captain Hogan cleared for Kotsebue Sound, and the next day the waters beyond the Heads revealed that a disaster had overtaken the little craft, which was never heard from again.

The Chinese Six Companies of San Francisco have appointed a committee of two local Chinese merchants to audit the books of the China Mail Steamship Company, in order to settle the controversy between the board of directors, and the minority stockholders, which has thus far resulted in the death of Fong Wing, member of the board of directors. This was announced by Set Bok Sing, the original organizer of the China Mail Steamship Company and a representative of the minority stockholders. The minority stockholders, he says, have sent two white men to the Seattle shipyards to investigate how the money appropriated by the stockholders of the steamship company for the reconstruction of the steamer "Nile," now the "Nanking," was spent. According to Set, the minority stockholders sent the two men north to ascertain if there are any discrepancies between the amounts charged and the amounts paid out. These men, he says, have been in the shipyard at Seattle where the "Nile" had new engines installed and various other repairs made for over three weeks. Set expects them to return within the next two weeks. Their report will be handed to the Chinese Six Companies. The report of the two Chinese who are to audit the books of the steamship company will also be handed to the Six Companies. In case any false entries or discrepancies are found, the directors will have to make good the difference, says Set. Set would not state the amount the minority stockholders believe has been squandered, but said he thought it amounted to nearly a half million dollars.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., Third Floor, California St., near Montgomery. Telephone, Sutter 5807. (Advt.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, FEBRUARY, 19, 1919.

MISPLACED JURISDICTION.

At the beginning of our Government the Merchant Marine was placed under the administative jurisdiction of the Department of the Treasury.

It was then the general belief that the two factors of this industry—the material (the ships) and the personnel (the seamen)—would reach the highest development possible if placed under the administrative head of one department. Under the direction of this department the principles now governing the administration of the Shipping Commissioners Act and the Inspection laws were developed. It is a matter of history that far from realizing the expectation of the country American sea power, up to our entry in the recent war, gradually declined until we were left with comparatively few vessels and fewer seamen.

There have been many administrators; some great, some indifferent; all honest and generally capable. It is the height of folly to charge that our decline in sea power was their fault. Unsound systems fall by gravity and the greatest of men can only delay, but not prevent the downward trend.

The Department of Commerce, formerly the Department of Commerce and Labor, was created to give systematic encouragement to industrial production and to trade. The basic idea of this department is that the two factors in industrial production and trade, the instrumentalities and the personnel, could be brought to the highest point of efficiency under one administrative head. The energies of the Department were naturally exerted to the improvement of tools, methods and organization, to increasing the productive power of the instruments in use, to creating new instruments, all to bring greater efficiency and to cheapen production.

But whatever success was attained in dealing with the instrumentalities, gradually the personnel was neglected and became of minor importance in the view of the department. The personnel suffered. It failed to follow the upward trend. Skill and general efficiency in workmen must follow the improvements in machinery or the improvements to a large extent are wasted.

Upon the entry of our country into the war, now happily concluded, the Shipping Board was created to accelerate the building of and to rehabilitate our Merchant Marine. The success which has attended its building program is unparalleled in the world's history. But while it has concentrated upon this building problem with such success, it is facing failure in the manning of this new fleet.

Except in rare instances and only after long experience does the mind occupied with the mechanical aspects of civilization, comprehend fully the fundamental distinction between the inanimate instruments and the men who operate the instruments, and that the problems of each of these factors must be dealt with in a different spirit. In recognition of this fact the Department of Labor was created.

The duty of the Department of Labor is to stimulate skill, to aid in the distribution of labor and to aid the laborer in obtaining remunerative employment, and finally to see that labor is employed under conditions conducive to safety, health and comfort.

The controlling thought of this department is development of a highly skilled and efficient personnel for all branches of industry. It deals with men. To be successful the department must know and sympathize with the working men; it must gain and keep their confidence. It is the one place in our Government to which the laborers may bring their grievances strong in the faith that they will not be misunderstood, confident of a sympathetic hearing and in any endeavor to right wrongs and compel fair treatment.

The personnel of the merchant marine is in a peculiarly difficult position.

The inspection service acting under the supervision of the Secretary of Commerce is authorized to make rules to see that every steam vessel "is in condition to warrant the belief that she may be used in navigation with safety to life." The local inspectors are charged with the execution of these rules.

This same inspection service is authorized to make rules governing the issuance of licenses to officers, to examine applicants, to grant or withhold licenses, and the execution of these rules is made the duty of these same local inspectors.

It is the duty of these same local inspectors to examine into and report upon accidents and disasters at sea and as part of that duty they are empowered to suspend or revoke the licenses of officers. The presumption is that whenever a vessel is permitted to go to sea it is seaworthy. It has been inspected and has been passed.

The crew on joining the ship may find that the vessel is not seaworthy. Its hull, equipment or personnel may not be what it ought to be; but as it has been formally passed any complaint as to unseaworthiness is equivalent to an accusation against the local inspectors of neglect of duty. It would be passing strange if under such conditions reports or complaints of unseaworthiness were to come in any great number from the personnel. Thus it happens that risks which ought not to be assumed are taken as a matter of course.

When accidents have occurred and it is not clearly shown that such were unavoidable it equally is a matter of course that the personnel of the ships are blamed and punished.

The accident, if not unavoidable, could result only from the neglect of duty either by the inspectors or by the personnel.

Inevitably injustice or what is honestly felt to be injustice occurs, and this in spite of the most conscientious administration of the department. The result is diminution in efficiency in both the personnel and the ships.

A somewhat similar condition attaches to the service of the Shipping Commissioners. These were intended to be employment officers. The Commissioners were to keep a register of seamen. Neither of these purposes have been attained. Such registers would have disclosed the rapid downward trend and a remedy might have been found. If such registers had been kept as the law contemplated, these would have been of very great value to the country during the war.

Shipping Commissioners might be presumed to be in close touch with the men employed and to be informed of facts connected with the vessels, facts which from the peculiar position of the inspectors would not reasonably come to them. But these Commissioners are reporting to the same department as the inspectors, and so the department is not burdened with reports or complaints.

There can be little doubt that these deplorable conditions would gradually pass away if the personnel and the instruments were under the administrative jurisdiction of different departments. Under such a rearrangement one department would automatically stimulate the other and neither of the factors would be neglected. Public interest in both factors would be stimulated, with the result that the understanding of and the interest in the development of real sea power would be materially increased.

"UTOPIAN MOONSHINE"!

That safe, sane and eminently respectable exponent of stand-pat journalism, the San Francisco Chronicle, can barely suppress its righteous indignation at the proposal made to the Paris peace conference "that the seamen of the merchant marine shall be guaranteed the right of leaving their vessels when the same are in a safe harbor."

The Chronicle's wrath is expressed in a typical leave-well-enough-alone editorial with this climax:

> The labor commission seems to have usurped the whole field of the peace conference, and perhaps that is the best guarantee that its wild debates will come to naught. Under the guise of discussing labor interests it has taken in every subject in the gamut of human relations, and some of its recommendations, as the right of sailors to desert their ships at any port, strike at the whole foundations of world commerce. In place of practical proposals our labor delegates have indulged in Utopian moonshine.

So, the right of seamen to quit their jobs when the ship on which they serve is in a safe harbor "strikes at the whole foundation of world commerce"!

How charmingly naive!

With characteristic stupidity the Chronicle, which has the magnificent nerve to label itself "100 per cent. American," blandly ignores these well-known facts:

1. That under the laws of the United States seamen on American ships already enjoy "the right to quit" at home and abroad.

2. That under the laws of the United States seamen on foreign ships have the same priceless privilege when their vessels are in any safe port of the United States.

3. That both the Inter-Allied Labor Conference at London, England, and the

Pan-American Labor Convention at Laredo, Texas, by unanimous vote demanded an extension of that right to the merchant seamen of all countries.

But what does all this amount to when a mossback editor considers "the foundations of world commerce"?

According to the Chronicle's theory, we must have world commerce, and if world commerce can not be had without human slavery, child labor and exploitation of the workers generally, why then we must and shall and will, forever and ever, continue in the same old groove.

It is the same old story. The abject worship of property and property rights; the sacrifice and surrender of all things worth while in order that "world commerce" may survive and flourish.

Our country is the richest on earth. We have only 6 per cent. of the population of the world, and our land area covers only 7 per cent. of the globe area. Yet we produce 25 per cent. of all the wheat grown in the world, 75 per cent. of the corn, 40 per cent. of the iron, 40 per cent. of the coal, and 50 per cent. of the copper.

And because we have all these riches and this great surplus we must have world commerce. And to have world commerce we must enslave those of our workers who carry this surplus to foreign lands!

Such is the logic of American stand-pat journalism. Such is the kind of stuff that is dished out, day after day, by the majority of our country's daily newspapers.

MILES OF LUMBER.

Nearly 400,000,000 feet of yellow pine lumber have been cut and transported by rail and water to shipyards on the Atlantic Coast and the Gulf Coast for construction of wood vessels under the direction of the United States Shipping Board Emergency Fleet Corporation. With this amount of lumber we could span the Atlantic to the French coast —3,000 miles or more—with a bridge floor 25 feet wide and one inch thick and have about 4,000,000 feet of yellow pine to spare. This is only half the story, as it does not include lumber shipped to Pacific Coast shipyards.

These figures are contained in a report filed by the Lumber Department, Supply Division, Emergency Fleet Corporation, in which the Department gave the total lumber requirements for 275 wood ships then in course of construction on the Atlantic and Gulf coasts as approximately 475,000,000 feet, of which 400,000,000 feet, as stated above, have already been cut and delivered. And these, including Pacific Coast shipments to shipyards on that coast, have been made in a little more than a year.

The figures given apply to yellow pine vessels built and building on the Atlantic and Gulf coasts and do not include those on the Pacific Coast which are built of fir. If these are included, the bridge floor from the Atlantic to the French coast could be made 50 feet wide. With the millions of feet of lumber used by the Shipping Board for the construction of tugs and barges added, the bridge floor could be provided with sides 3½ feet high.

The battle cry of "A World Safe For Democracy" was glorious, but now that the battle is over let us not let our battle fires lapse into innocuous desuetude.

THE MOONEY CONGRESS.

A Report on the Transactions of the Recent Chicago Convention Called to Deal with the Mooney Case.

Secretary E. D. Nolan, of the International Workers' Defense League, has furnished the Journal with the following résumé of the recent Chicago Labor Congress on the Mooney case:

The Mooney Labor Congress which convened in Chicago, January the 14th, was in many ways absolutely unique in the history of the American labor movement, or of the world, for that matter.

Called on six weeks' notice, due to the exigencies arising from Governor Stephens' commutation of sentence, it was an appeal to the rank and file of American labor, and the rank and file responded nobly.

In spite of the handicap of the "flu" epidemic and the holidays during which many unions did not meet, 1182 labor bodies responded to the call.

Practically all the large cities in the country were represented by delegates from their respective central bodies.

The corps of newspapermen covering the convention outrivaled in numbers even those attending the national conventions of the dominant political parties.

Be it said, however, that only the papers sympathetic to labor attempted to render a fair and impartial report. The millionaire-owned daily papers were not looking for truth, nor did they attempt to analyze the underlying "motif" of the convention. Most of them were hungry for "stories" which could be twisted into "sensations" that would make the papers sell.

Others, out and out organs of predatory wealth, like the Chicago Tribune, manufactured the most cold-blooded lies with the deliberate intention of obstructing a movement to obtain justice for labor, looking upon it (as it undoubtedly is) as a menace to the privilege of the master class.

The one sweet morsel which the big dailies seized with avidity was furnished by the fact that these delegates from all over the United States represented all phases of the labor movement from the ultra conservative through all shades of liberalism, progressivism to the extreme radical.

The clash of ideas which manifested itself on the floor in the spirited debate between earnest men, expressing themselves vigorously rather than elegantly, was played up by a part of the press as a prelude to forthcoming riots.

The scare headlines worried no one, however, except the riot-squad of the Chicago police, who held vigil for three nights in full accoutrements at the Chicago avenue station in anticipation of riots described in the reportorial dream books.

The mere venders of news could not understand—what so strikingly manifested itself later —that the conflict was not over main issues, but was merely caused by men and women of strong convictions, all anxious to point out what to them seemerd the best way to reach the same goal,—justice for labor. Conservative or radical, on that central issue the convention was an absolute unit.

The main resolution on the Mooney case submitted by the Committee on Resolutions as embodying the best thought of the convention, expressed in twenty-six resolutions dealing with this specific issue, contained three cardinal propositions, to wit:

1. Remedial legislation in California.
2. Appeal to Congress and President for Federal intervention.
3. General strike set for July 4, 1919, if above means fail. Strike to continue till Mooney and Billings are free.

During and after the session of the Mooney Labor Congress, Assemblyman E. S. Hurley of Alameda County, California, a union electrician, introduced two measures in the California Legislature:

1. Bill to investigate Fickert and his methods. Vote pending.
2. Bill to amend statutes to the end that convictions secured through fraud and perjury be reversed. Vote pending.

Thus a campaign for remedial legislation in California has already been inaugurated without cost or worry to the defense forces.

Proposition number two is in the hands of President John Fitzpatrick of the Chicago Federation of Labor; Andrew Furuseth, President of the International Seamen's Union; Alex. Howat of Kansas District, United Mine Workers; J. F. Anderson, International Vice-President Machinists' Union, and Martin Flyzick of Wasington District, United Mine Workers.

It is a powerful committee, both as to the quality of its personnel and the strength of the organizations back of them.

Perhaps they will succeed,—perhaps they will not.

It is a mooted question. But the point is, no body of men with power behind them has hitherto tried to get federal action. If they

DIED.

Isack Hansen, No. 1525, a native of Norway, age 38. Died at San Francisco, Cal., Feb. 17, 1919.

Murl Lawrence Kelso, No. 1276, a native of Indiana, age 39. Died at San Francisco, Cal., Feb. 15, 1919.

Carl W. Lofgren, No. 797, a native of Sweden, age 41. Died at San Francisco, Cal., Feb. 15, 1919.

Fred E. Roalsen, No. 917, a native of Norway, age 38. Died in the wreck of the S. S. "Temple E. Dorr," Cuba, Jan. 4, 1919.

The United States Shipping Board has canceled contracts for six ships at the Moore (Oakland, Cal.) Shipbuilding plant. They represent a contract price of nearly $13,000,000. The cancelation of these contracts, it was said, was due to strikes and labor conditions in the east bay yards. It was intimated that further cancelations could be expected. The contracts canceled in the Moore yards were as follows: Three 10,000-ton steel oil tankers, at a contract price of $2,400,000 each. Three 9400-ton steel freighters, at a contract price of $1,800,000 each. These cancellations follow the announcement of Charles Piez, director-general of the Shipping Board Emergency Fleet Corporation, that strikes in violation of existing agreements between the shipyards, the Government and the unions would cause the cancellation of contracts in the yards affected. The contracts canceled during the week are for ships whose keels had not been laid.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Government ownership and democratic management of the railways of the United States has been formally demanded of Congress by the spokesmen of two million railway workers. Glenn E. Plumb, general counsel for the four brotherhoods of transportation employes, and Austin B. Garretson, chairman of the brotherhoods' legislative board and head of the Order of Railway Conductors, testified before the Senate Committee on Interstate Commerce that the railroad workers would never approve of the return of the properties to private operation. They declared also that while they would be willing to see the present control extended for five years in order to afford time for the Government to get ready to really operate the roads on a proper basis, certain autocratic policies of the Railroad Administration must be changed in the meanwhile. The chief reform necessary just now is the withdrawal of the McAdoo order that the employes shall not take an active part in politics.

"The railway problem," said Plumb, "presents a social question which can only receive a political solution. . . . The interests of the employes in the ultimate solution, measures by the financial returns to them, far exceed the interests of the security holders. In point of numbers they represent approximately one and a half million voters, with their families and dependents, between five and six million citizens."

Then he suggested that the unfairness of the no-politics order would be clearly recognized if the words "owner of any railroad securities or official of any railway corporation" were put into that order in place of "employe in the railway service of the Uinted States."

"We must vehemently object," he continued, "to being in any way barred from the full participation in the affairs of this Nation, in which we are so vitally interested. If this Government should continue to demand from us our sole and wholehearted allegiance, it must give to us the same protection in our civic and political rights which it gives to others who may have adverse interests in the determination of a political issue. We must have the same opportunity to organize for the accomplishment of a legitimate political end that our adversary enjoys. We must have the same freedom to contribute of our resources to procure legitimate political action, and we must have the same right to select as our representatives in the United States Senate, or any other legislative body, those who share in our convictions and whom we deem best able to give expression to our political beliefs. . . .

"For a government erected by all the people to deny to a class of citizens, that classification depending entirely upon the nature of their employment, the full protection of the civic rights which it was intended that that government should guarantee to all, is to alienate the allegiance of that class and to sow the seeds of discontent, which in due season blossom in anarchy and revolution."

Plumb was asked whether the employees had reached any understanding with the Director General that this no-politics order was to be abolished. He said no formal promise had been given, although he made it evident that the men are disregarding the order, and that they look for its withdrawal.

The reactionary Senators who comprise the majority of the committee were startled at the boldness, the detailed completeness and the logic of the plan for Government ownership and efficient democratic management of the railroads. Under this plan the Government would buy the railway securities, which have decreased in value from $15,027,000,000 in 1912 to $13,700,000,000 in January of 1919. The Government would organize an operating corporation, which would have no capital except its operating ability, and whose board of directors would be chosen as follows: One-third to be elected by the classified employes below the grade of appointed officials; one-third to be elected by the appointed officers and employes; one-third to be appointed by the President of the United States. This board of directors would have power to appoint all officers from president down to the point where employment by classification begins, and to prescribe the conditions of employment and classification of all other employes.

Wage boards and boards of adjustment, similar to those now in operation under the McAdoo arrangement, would be maintained.

This plan, when analyzed, is nothing short of a proposal that the railroad industry be run by the actual railroaders for the whole people of the United States, instead of being run by either business or political aristocrats for the benefit of a few stockholders and the advancement of someone's political fortunes. It takes the property out of politics, and it adds to the political welfare of the country all the mental and moral resources of two million skilled workers. By removing the interest of the idle rich in railroad property it puts an end to the constant poisoning and corruption of public life by the railroad lobby.

John Scott, secretary-treasurer of the Railway Department of the A. F. of L., said to-day that the referendum taken by the fourteen organizations in the Department showed an almost unanimous vote for Government ownership, with a willingness to agree to the five-year preliminary lease of life to the Railroad Administration. However, recent tendencies among high officials in the Railroad Administration are taken by the union men to mean that these officials are going to try to discredit Government control from now on, and the organized men may find it necessary to set aside their former decision for the five-year delay. They want Government ownership. If Railroad Administration policy is to be hostile to Government ownership—and Mr. Hines has testified that he is opposed to it—then the organized labor movement will go straight for its goal.

Exactly as was the case in 1916, when Congress passed the Adamson eight-hour law for the train crews, Congress does not favor what the men demand. But two million votes are not to be hastily cast aside. These Senators are scratching their heads!

For big politics is on tap once more in Washington. Bill Taft is organizing another attempt to get the Republican nomination for the Presidency in 1920. Knox of Pennsylvania, and Harding of Ohio and Hiram Johnson and Borah are also mentioned. Taft is playing the National War Labor Board for all it is worth, in the hope that the labor movement will forget how he fought every interest of the wage workers during the years when he was in public office. Recently he has even tried to make his peace with the prohibitionists, after a lifetime of hostility to their idea. And to catch any stray votes that may help, he is at the same time heading the propaganda of the League to Enforce Peace and making the proposal that some 100,000,000 to 150,000,000 Russians be killed off unless they change their politics.

Knox and Harding are equally anti-labor, while Johnson and Borah, friendly to labor in general, are considered unlikely to get the nomination because they come from States too far West.

The Labor Party agitation has worried the politicians a good deal more than they will admit. You may have noticed that neither Senators Myers, Walsh, King, Thomas, Sherman, Smoot nor any others of the "copper" or "packer" sympathies have talked about this movement, but they have kicked up a great dust about "Bolshevism." On the day that the packers were shown to have been controlling newspapers secretly, by big loans of cash, the special interest crowd in the Senate put through their resolution to investigate the "Bolshevik" activities of a committee composed of Frank P. Walsh, Jane Addams and a half dozen editors of the chief liberal magazines in the country. Thomas of Colorado and Jones of Washington also began to paint the Seattle strike as a sort of red revolution, just when their pet scheme for turning over to private profiteers billions of dollars' worth of Government oil and coal and phosphate lands, including the Cunningham coal claims in Alaska, was being put on greased skids, in secrecy, to get through the House and and Senate. Thomas declared that it was time that old party differences be dropped. He kept off the Labor Party, but his meaning was plain enough.

But here's a new one from Charlie Schwab. He is getting scared again, over in Paris, and he has had his lawyer, Paul Cravath, come before the War Labor Board and withdraw the refusal of his Bethlehem Steel Company to carry out the Board's award. The 20,000 men in the plant are promised that the company will deal with the shop committees they have chosen. They are tired of trickery, and are waiting to be shown. Schwab's change of mind seems to be due to a discovery that President Wilson was outraged by Hunnish treachery, even in the United States, and was going to deal with it.

"If three out of four provision stores to the block could be done away with and the entire trade handled by one store, the cutting off of duplicate plants would reduce cost by a very large percentage."—New York Times.

The union label acts as an educator, organizer and director for the public, thus making the purchaser the intelligent and friendly ally of, instead of the indifferent foe to organized labor.

THE MOONEY CONGRESS.

(Continued from Page 7.)

fail, it is proof conclusive, convincing to men of all shades of opinion within the labor movement, that justice cannot be secured though any governmental agency, and labor must rely on its own power to safeguard itself against capitalist conspiracies.

It was in pursuance of the thought that the "Mooney Case" is a well-defined conspiracy, not alone against the individual Mooney, but against the organized labor movement, that the Committee on Resolutions submitted the second main resolution covering national and international aspects of the case. The committee held that the Mooney case symbolizes the struggle of labor to free itself from industrial autocrats and that the very type of men of Big Business, who are behind Fickert and his crew, are the same who foster wars and maintain race animosities in order to increase their own power and opportunity for exploitations.

Embodied in this resolution, the right of all nations to determine their own mode of living, withdrawal of troops from Russia, and the release of political and industrial prisoners were recommended to the members of the American labor movement and all justice-loving citizens as subjects requiring the utmost effort, in order to preserve the greatest fundamental rights of men and peoples, the basis of all fundamental justice: There is no wrong without a remedy.

To carry out the detailed program, leading up to the climax on July 4th, entailing, as it does, thorough organization work and an intense publicity campaign, the convention recommended a voluntary assessment of 50 cents upon every organized worker.

Many delegates came instructed by their organizations to present to the convention resolutions bearing upon after-the-war reconstruction.

It became apparent early in the proceedings that on this question there was the widest difference of opinion, which would have prolonged the convention far beyond the financial resources of most delegates.

The Committee on Resolutions perforce had to take cognizance of the fact that these resolutions, be they ever so meritorious, were entirely outside of the purpose of the convention call, and, therefore, recommended no action, a recommendation which was adopted by an overwhelming vote. The committee, having been sustained in its recommendation and the object of the convention accomplished, the chair declared the convention adjourned sine die.

Undoubtedly there was some disappointment among those delegates who had expected to take up a reconstruction program. But the great majority of delegates, who were sent to voice their opinion on the "Mooney Case" were thoroughly satisfied with a good job, well done.

We note with great satisfaction the many endorsements of the convention's action. Particularly does it augur well for success when those who failed to have their ideas presented to the convention, now that the smoke of battle has cleared away, show themselves big enough and broad enough to forget differences of opinion for the time being, and are willing to put their shoulders to the wheel to make the 4th of July, 1919, a true day of Declaration of Independence from the tyranny of courts, a tyranny more powerful and far more subtle than that exercised by King George in 1776.

INTERNATIONAL WORKERS DEFENSE LEAGUE.
E D NOLAN, Secretary-Treasurer.

"Where the carefully trained child learns bad manners is a standing mystery to its watchful parents," remarked a speaker at a meeting of a parent-teachers' association recently. "These anxious rearers of the young are often heard propounding this query, but generally without result. Once in a while, however, out of the deep silence comes an illuminating answer. Johnny furnished one just the other day. He had just finished a particularly toothsome dish of apple pudding, which he ate to the last morsel. Then, despite the fact that there was company at the table, he deliberately picked up his saucer and licked it clean. 'Johnny!' exclaimed the mother after a horrified gasp, 'whom did you ever see do a thing like that?' 'Dogs,' replied Johnny."

The union label is an inspiration, a guide-post and a rallying point for the energetic and conscientious women in every community, and for this reason the Woman's Union Label League came into being.

IS MEXICO TO BE NEXT?

Newspaper comment running throughout recent weeks is in the tone of "Mexico next!" The New York Times has an editorial condemning as confiscatory the provisions of the new Mexican Constitution with regard to natural resources, particularly oil deposits. "No time should be lost," says the Times, "in making the Mexican Government understand that titles obtained and granted in good faith must be respected, and that the enforcement of confiscatory legislation will not be endured." The Engineering and Mining Journal comes out with a fine foursquare avowal of Palmerstonism: "Commerce follows the flag, but the flag follows the prospector," and proceeds to talk about two million soldiers, not as a threat, but merely by way of pointing out to Mexico that "the viewpoint of the American public has changed somewhat within the last few years"; and ends with the customary intimation to Mexico that "what we ask her to do is for her own good more than ours." The public will get more and more of this kind of thing in the course of the next few months, and we hope that newspaper readers, while there is yet time, will learn to appraise it at its proper value. In case of disagreement between two governments, the chosen function of the press in most instances is to egg on each of them until the disagreement winds up in a serious collision. This is precisely what the American press is doing—urging on first the Carranza Government and then our own. If the public permits itself to be moved, the press and the interests it speaks for will gain their ends, but not otherwise.—The New York Nation.

WHAT IS A BOLSHEVIKI?

Several of the JOURNAL'S readers have asked for an "authentic" definition of the word Bolsheviki. Here is one quoted verbatim from the War Cyclopedia issued by the Committee on Public Information in Washington:

"Bolsheviki. A Russian word meaning 'belonging to the majority'; originally the left or radical wing of the Russian Social Democratic party. In 1905, at the time when the split in the party occurred, the radicals, led by Nikolai Lenine, were in the majority, or Bolshinstvo, and hence called themselves Maximalists or Bolsheviki, meaning the majority faction. The moderates, similarly, are called Minimalists or Mensheviki. The Social Democratic party is composed mainly of industrial workers. The other great Socialist party of Russia, the Social Revolutionary party, is made up chiefly of peasants. In this party also a division occurred into a more and a less radical wing, and in the summer of 1917 the more radical faction, finding themselves in agreement with Lenine on all points except agrarian policy, adopted the name of Bolsheviki, and began to work for the most part in alliance with their radical brethren of the Social Democratic party against the moderates, or Minimalists, of both old parties."

"It is the province of Law to make it as easy as possible for men to do right and as difficult as possible for them to do wrong."—William E. Gladstone.

LET ABSENT SEAMEN VOTE.

Editor Seamen's Journal:

In enclose copy of letter received from Senator James A. Foley, member of the Senate, State of New York, 14th District, who is chairman of the Legislative Committee of the Democratic Organization. I have contended that seafarers should be furnished with the machinery of voting. Perhaps if you publish Senator Foley's letter the State Legislatures of other coast States will be disposed to take favorable action also in the proposition.

Yours very truly,
S. B. AXTELL.

Dear Mr. Axtell:

I am in receipt of your letter of recent date in reference to extending the right of absentee voting to seamen.

I agree with you that some provision should be made to help them. The policy of our State, however, has been to discourage absentee voting, except in case of war. The Commercial Travelers, for several years, have been trying to get an amendment to the Constitution through, permitting them to register or vote while absent from the State. As you know, it is necessary to pass a Constitutional Amendment to permit such voting.

I will take the matter up, however, with Governor Smith and the chairman of the Judiciary Committee of the Senate, to ascertain if it is possible to initiate legislation to accomplish the purpose you have in mind.

Sincerely your friend,
JAMES A. FOLEY.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.
2. Free schools, free text books and compulsory education.
3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.
4. A work day of not more than eight hours in the twenty-four hour day.
5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.
6. Release from employment one day in seven.
7. The abolition of the contract system on public work.
8. The municipal ownership of public utilities.
9. The abolition of the sweat-shop system.
10. Sanitary inspection of factory, workshop, mine and home.
11. Liability of employers for injury to body or loss of life.
12. The nationalization of telegraph and telephone.
13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.
14. Woman suffrage co-equal with man-suffrage.
15. Suitable and plentiful playgrounds for children in all cities.
16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.
17. Continued agitation for the public bath system in all cities.
18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.
19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

"must rest upon the Postoffice Department."

"No statement on the telephone situation would be honest or complete," she continues, "if it failed to draw the attention of the Postoffice Department to the widespread discontent and unrest that exists among the telephone workers. The Postmaster-General cannot be unaware of this dissatisfaction, since it has expressed itself upon numerous occasions in strikes and threats to strike. The situation is no less acute among the unorganized workers, save that they lack the voice and means of expression which organization brings."

Problems Ahead.

The United States Bureau of Education has issued a special bulletin on America's part in the great war, for circulation in the schools of this country. Special emphasis is given to the importance of the problems of reconstruction. The bulletin says:

"The war has made the world safe for democracy only in the sense that the door has been opened, that the path has been cleared of all obstacles set up by autocratic governments. The establishment of just democracy is still to be accomplished.

"What the war has accomplished is to win for the world the opportunity to work out the problems of democracy unhampered by the forces of autocracy. This task is ours and will extend through the years. Patriotic duty to our country and our obligation to the new world demand that we should work at it now and for years to come with redoubled energy, and with unanimity no less complete than that with which we have waged war."

Heads Labor Board.

The commission on international legislation on labor of the Paris peace conference has unanimously elected Samuel Gompers, president of the A. F. of L., as president.

The commission was appointed by the peace conference and has no official connection with the proposed interallied trade union conference which will be attended by President Gompers and four vice-presidents of the A. F. of L.

President Gompers' colleague on the peace conference commission is Edward N. Hurley, chairman of the United States Shipping Board.

Has Strike "Solution."

Mr. Harry Gordon of New York, announces that the Dress and Waist Manufacturers' Association has a solution for the strike of 35,000 workers being waged by the International Ladies' Garment Workers' Union.

Mr. Gordon said the manufacturers will employ workers who have no union connection and of a type "different from our present class of workers."

There are enough workers, unemployed in this city, due to the abandonment of Government work, he said, to supplant the strikers, "women and men who do not submit to the bolshevistic doctrines which the strikers drink in so readily."

"The new class of help which the manufacturers intend to employ," continues Mr. Gordon, "will be kept permanently. The workers will be carefully selected from the army of unemployed which is at present marching through the streets in this and other cities, and our permanent solution of the great difficulty—the class of help—will have been solved."

Mr. Gordon, it might be stated, is not a manufacturer and knows nothing of the garment industry. He is a hired man—a lawyer. The "bolshevistic doctrines" which he refers to are a demand for the 44-hour work week and a living wage. These demands have been indorsed by A. F. of L. Secretary Frank Morrison in a letter to President Schlesinger of the International Union congratulating the trade unionists on their splendid fight for better conditions.

Up to Old Tricks.

The National Liberal Immigration League has issued a statement against the proposed stoppage of immigration for a period of four years. The league ignores industrial conditions in this country and declares that it "would be wiser to wait until we have a problem before we attempt to solve it."

This league opposed the passage of the present Burnett immigration restriction law in 1915. At that time President Gompers made public a series of sensational documents which showed that the league was financed by large employers of labor, and steamships companies.

The list included the Pittsburgh Coal Company, Susequehanna Coal Company, Carnegie Corporation, Lackawanna Steel Company, Jones & Laughlin Steel Company, Berwind-White Coal Mining Company, Rogers-Brown Iron Company, and other large employers.

Among the documents was a cable to the Hamburg Steamship Line, Hamburg, Germany, in which officers of the league state that they owe $7,000 in salaries, rent, printing, etc., and that "unless we pay immediately we will be sued and put in bankruptcy with disagreeable consequences for all concerned."

In urging large employers to contribute regularly to the support of the league, officers state that "we have to send appeals and communications to some 15,000 influential persons, most of them clergymen."

It was also stated that it is necessary to send to Washington a number of delegations composed of members of various nationalities. The league gives this hint on how delegates were chosen for these junkets:

"But the delegates were not really chosen by bodies of their own nationalities."

Since President Gompers' exposé the league has kept out of public print up to the present time.

Labor Agents Howl.

Private labor agents and employment bureaus throughout the country are trying to put the United States employment service out of business by having Congress refuse to appropriate the necessary maintenance funds. The Government has dealt a hard blow to this meanest of labor exploitation by its no-profit system of supplying labor.

The methods employed by the agents is shown by a circular issued throughout New York State by General Secretary Daly of the Associated Manufacturers and Merchants of the State of New York.

Daly acknowledges that his executive committee and board of directors have not passed on the question, and then declares that "there is a very general impression that the United States employment service should not be continued after the war necessity ceases." He says the service has been a failure, that to continue it would be for the purpose of furnishing jobs to organized labor's business agents and "social welfare folks," and that business men should urge their Senators and Congressmen to vote against any appropriation.

New York State Director Kirchwey of the employment service has protested to the president of the manufacturers' association. He says it is obvious why the private agents oppose the service.

WHO WAS SPARTACUS?

Just as the Russian revolution added the word Bolsheviki to our vocabulary, so the German revolution has produced Spartacus. Most Americans have learned by this time that Bolsheviki is the Russian for "majority," but the derivation of Spartacus, the name given to the Liebknecht group, is little known. The reason for its application to this section of the German revolutionists arose from the fact that the name "Spartacus" was the recognized signature of Karl Liebknecht in his secret communications to his followers in the period preceding the revolution. But the original Spartacus was another revolutionist who, away back in the year 73 B. C., led a revolt of Roman slaves. In those days schools were established in which slaves were trained as gladiators to fight each other in the arenas for the amusement of the "society" people of Rome.

From one of these schools, near Capua, in the year mentioned, there escaped forty-six of these slave-gladiators, among whom was Spartacus. They fortified themselves on the top of Mount Vesuvius. There they were joined by large numbers of escaped slaves. With Spartacus as leader they succeeded in overcoming soldiers sent to recapture them, and getting possession of their arms were able in three battles to defeat others sent in pursuit. This success brought such accessions to their ranks that their number soon reached a hundred thousand. For two years throughout Southern Italy they were completely victorious against the armies of their former masters, until, weakened by racial and other quarrels, they were surrounded and overcome by Roman armies. Spartacus died like a hero, for, though wounded and forced to his knees, he fought on against his foes. The bodies of 5000 of his followers were set up on spikes along the Appian Way as a reminder to all rebellious-minded slaves.

Just to settle the occasional argument—here it is again: Transatlantic steam navigation was inaugurated wth the voyage of the American steamship "Savannah." The first regular transocean service was begun by the British vessel, the "Great Western," which sailed April, 1838.

MERCHANT SHIPS NOW BUILDING IN THE WORLD.

The total number of merchant vessels under construction throughout the world (excluding the Central Powers) on December 31, 1918, according to Lloyd's Register Shipbuilding Returns, was 2,189 ships of 6,921,989 gross tons, or double the largest corresponding tonnage under construction by the world before the war, which was 3,446,890 gross tone in June, 1913.

The details of merchant tonnage under construction on December 31, 1918, were as follows:

Countries.	Steamers and motor vessels.				Sailing vessels.				Total.	
	Steel.		Wood.		Steel.		Wood.

THE GERMAN SHIPS.

After having had "Conservation" dinned into our ears daily and hourly for the past couple of years, it is somewhat surprising to find certain more or less influential persons and newspapers advocating "sinking without trace" the German warships recently delivered to the victorious allied powers in accordance with the terms of the armistice. Four years of reckless but necessary extravagance in the expenditure of money and materials should have taught even Admirals and those profligate spenders, the newspaper editors who lavishly scatter millions and billions in beautiful round linotype figures, the necessity for retrenchment and salvage.

Germany's much vaunted and feared navy, we learn, was mostly junk—but a very superior quality of junk at that. Of the ten battleships turned over to the Allies, and constituting the very flower of the German fleet (outside the six battle-cruisers, also surrendered, and which appear to be fairly valuable as loot), nine are said to be so entirely out-of-date in style and equipment as to be worthless from a naval standpoint. If this is true, Germany showed good judgment—from her standpoint—in refusing to engage the British fleet in battle; her navy would have lasted about as long as did Cervera's collection of antiques at Santiago. Ten years ago the German vessels were mighty monsters of destruction; now they are useless for action against "modern" warships—which is a graphic illustration of the wastefulness of warships. But that is another story.

To get back to the disposition of these German warships. Taking the word of naval authorities that these vessels are valueless for war purposes, it is still very clear that they are worth millions as "scrap," and that to sink them wolud be a wanton waste and crime against the sacred name of Efficiency. —S. F. Star.

"The latest census of the United States gives the number of families occupying homes as 20,000,000. Of this number more than one-half, 10,700,000 are renters. Of the 9,000,000 who live in their own homes, 6,000,000 are free from debt and 3,000,000 are carrying mortgages."—Emerson P. Harriss, "Co-Operation," p. 63.

PRUSSIAN LABOR POLICIES.

Returns of the "Labor Inspectorate for Prussia" for 1917 cause the Berlin Vorwaerts to comment on the "criminal sapping of the nation's strength," which "will exact a fearful revenge on the future race."

Male employees over 16 decreased, according to these statistics, from 2,662,152 to 1,956,202, but women employees increased from 667,734 to 1,240,593. Employees 14 to 16 increased from 280,148 to 327,904, and children under 14 from 2584 to 6012. In engineering workshops the number of women increased from 51,513 to 327,512.

Cases where privileges due to exemptions from the workmen's protection act have been scandalously abused have risen to 6108 for exceeding the ten-hour working day rule for women, 9292 for suppression of the legal lunch-time interval, nonobservance of the prohibition of night work to 13,398, and nonobservance of the prohibition of juvenile labor to 1209.

The Vorwaerts complains of the indulgence shown to employers by the authorities who granted permission for overwork for women to the extent of 23,000,000 hours and for night work by women to a total of 44,000,000 hours.

The two-shift system is still maintained generally, while few three shifts are in operation.

Fish-skin "pearl" tiaras and necklaces have long been work by women, but fish-skin shoes are among the many new and interesting things shown at the recent chemical exposition in New York City. The modern chemist by a clever curing process makes the skin of the shark, the codfish, the mackerel, the tuna fish, and others as tough and durable as leather of the same thickness.

The objection to compulsory arbitration lies not so much in the fear of injustice as in the dislike of being forced to accept even justice at the hands of the Government. We prefer the injustice of our own making to the justice of an assumed master.

Labor News

A committee of Trade Union women is to be sent to Europe shortly by the Department of Labor to study reconstruction problems as applied to women in industry.

The Independent Labor Party of Chicago nominated the following members for municipal offices: John Fitzpatrick, president of the Chicago Federation of Labor, for Mayor; John Kikulski, Polish organizer of stock yards workmen, for City Clerk, and Knute G. Torkelson, a carpenter, for City Treasurer.

A bonus of $240 to each employe of the Federal and District Governments, to meet the high cost of living, was voted by the House in passing the legislative, executive and judicial appropriation bill for the fiscal year beginning July 1, next. This represents a doubling of the $120 bonus recommended by the Appropriations Committee.

The Public Employment Bureaus of the State of California during the calendar year 1918 filled 165,323 positions, according to the report of the Superintendent of the Bureaus filed with J. P. McLaughlin, State Labor Commissioner. Positions for males comprised 149,319 of this total, the remaining 16,004 being for females placed.

The American Association of Labor has published a colored chart showing the progress of workmen's compensation legislation. The Far West shows a massive red block, while the South is solidly black. Workmen's compensation laws are now in force in thirty-eight States, in addition to Porto Rico and the Territories of Alaska and Hawaii. The Federal Government also provides such protection for its own million civilian employees.

The Independent Labor Party organized in Chicago by the Chicago Federation of Labor has begun the publication of a weekly newspaper, "The New Majority." "The New Majority" starts as a 16-page paper. In the near future it is expected that it will be converted into a daily. The first issue of the paper declares: "It is fitting that the toilers should have their own newspaper, upon which they can rely for the truth about things of interest to workers, and in which they can find expression of their point of view. The Republican and Democratic parties have betrayed the people. The Labor Party comes to smite them. The newspapers have been the mouthpieces of the two old parties, and their bosses, the money kings."

Resolutions were adopted by the Farmers' National Conference on Reconstruction in America and International Reconstruction at Washington, appealing to Congress to preserve for the use of all the people the "natural resources of the Nation now in public ownership—coal, iron and copper ores, water power, timber lands, phosphate and potash deposits, gas and oil lands." The Conference urged the defeat of the bills now before Congress transferring these lands to private ownership without proper safeguards for the public interests. The Conference also urged upon Congress "immediate legislation eliminating watered stock and stock fraudulently issued and not representing any actual and prudent investment on the part of the railroads from their capitalization, and to inaugurate Government ownership and operation."

Carl Hansen, a native of Soon, Norway, age 35, formerly a member of the Lake Seamen's Union, is inquired for by his mother, Marn Hansen, 778 Sixth Ave., Milwaukee, Wis. 8-17-18

Members who were present at the time when W. Bodie met with an accident on board the S. S. "Eastern Sea," last July, are requested to communicate with the above named comrade, P. O. Box 65, Seattle, Wash.

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted

La Follette's Magazine, Madison, Wis.

• • •

League President, Judge James M. Rea, Savannah, Mo.; Vice-Pres., Kenneth B. Elliman, Boston, Mass.; Treasurer, Herman Cohn, Seattle, Wash.; Secretary, W. E. Brokaw, Longbranch, Wash.

Home News

The board of regents of the University of Utah announced that it would ask the next Legislature to make it compulsory for all physically fit male students to take military drill at the university five or six hours a week for two years.

The Treasury Department has issued an appeal to holders of war savings stamps to either hold them till maturity or have them cashed at a postoffice. Complaints have been made that brokers are buying these stamps at reduced prices, and it is urged that they be redeemed at postoffices, if it is necessary to sell.

Chairman Colver, of the Federal Trade Commission, before the House Interstate Commerce Committee, said that if the present tendency of the "big five" packing companies is allowed to continue they will, within ten years, be able to dictate to the American people just what food they shall eat, how it shall be packed or sold and just how much shall be paid for it.

In his report on the operating results of the federalized railroads, Director General of Railroads McAdoo states that 6,496,150 troops were handled between January and November 10, last year. These movements averaged 625,434 a month and the maximum was reached in July, with 1,147,013. The number of men handled in Pullman cars was 1,868,-210, and the number in coaches, 4,627,940.

The influenza epidemic caused 111,688 deaths in the forty-six largest cities and last year increased the combined death rate for these communities to 19.6 per 1000, according to Census Bureau statistics. Total figures for the country are not available. Baltimore, with 26.8 per 1000, and Nashville with 26.4 had the highest rates of the registration cities, while St. Paul with 13.9 and Minneapolis and Grand Rapids with 14 each had the lowest.

Building of railroads in the South, reconstruction of railroads throughout the country, and all other public improvements contemplated by the Government should, in the opinion of Judge Elbert H. Gary, chairman of the board of directors of the United States Steel Corporation, be begun at once. "Why should there be any talk about unemployment?" said the Judge. "The country was never more in need of its workers than now, and it will use all the workers it can get. I don't think there is going to be any permanent or menacing unemployment."

William G. McAdoo, former Director-General of Railroads, urged upon the Conference on Inland Waterways, at Defiance, Ohio, the importance of extending Government control of railroads for five years, in order to co-ordinate rail and water routes, and bring both into harmony with our merchant marine. Mr. McAdoo closed his appeal by saying: "The powerful and sleepless forces of reaction are solidly arrayed against this plan. They will defeat it unless the American people are aroused to the situation. The time is short. The matter is vital. My earnest suggestion to you and your associates is that you press upon the attention of the Congress the importance of the five-year control in order that the things you want to accomplish may be brought about."

HEALTH

THE GREATEST OF ALL BLESSINGS
CAN ONLY BE PERMANENT IF

Laxcarin Products Co.,
Price $1 per box; 6 boxes, $5.00 Dept. E-99, Pittsburgh, Pa.
Will Send C. O. D. Anywhere.

Domestic and Naval

The entire crew of the transport "Mount Vernon" has been commended by Secretary Daniels for gallantry displayed when the ship was torpedoed by an enemy submarine September 5 last. "The conduct of the entire personnel from the time the ship was struck until she arrived safely in port was such as to uphold the best traditions of the service, according to official reports," says a statement issued by the Navy Department.

All American ships which have been requisitioned by the Government during the war have been released to their owners, with the exception of those engaged in army service, it was announced recently by the United States Shipping Board. In the place of those retained for service and which are fitted for the transportation of troops, the owners will receive an equal tonnage of Government-built and owned vessels.

Messrs. Welding Ring, J. B. Smull and A. C. Fetterolf, constituting the Chartering Committee of the United States Shipping Board, have tendered their resignations to John A. Donald, acting chairman of the board. The resignations have been accepted, and until the duties can be taken over by the subordinates who will manage affairs until the Government abolishes the committee, these officials will remain at their post.

The annual report of the Panama Railroad Company for the year ended June 30, 1918, shows a gross income from steamship operations of $5,649,729, which compares with $4,108,412 for 1917, $3,341,278 for 1916 and $2,642,457 for 1915. Net revenue from steamship operations amounted to $1,359,208 for last year, as compared with $1,162,800 for 1917, $1,004,373 for 1916 and $499,853 for 1915. The stock of the Panama Railroad is owned entirely by the United States Government.

Seagoing American merchant ships of 1000 gross tons or more numbered 1663 on January 1 this year, the Department of Commerce reported and the total gross tonnage was 5,656,856. All were steam vessels except 319 sailing craft of 518,192 tons. The Department also reported fifty-five former merchant ships operated by the War and Navy Departments and placed their tonnage at 396,829. The total number of ships registered under all Government departments was 1141 and the gross tonnage was 3,681,700.

The order of the Emergency Fleet Corporation relative to cancelling orders on steel ships which would not be laid down before next August affects the steel mills more than it does the shipyards, for the reason that there has been no order to stop work on any ships actually in hand, nor has there been any intention not to proceed with the erection of the material which has been delivered in wholesale quantities and which is lying on the ground at the shipyards. At Hog Island, for instance, such material runs well into the hundreds of thousands of tons. In other words, what the Emergency Fleet Corporation has actually done is to stop the production of material at the source until the whole shipbuilding program has been revised in accordance with the nation's needs for merchant ships to meet peace conditions.

News from Abroad

The Uruguayan Government has discharged all foreigners from the army as a preventive measure against the Maximalist movement.

Porto Rico is consuming 50 per cent. more coffee, according to a San Juan coffee dealer, than she did before the island "went dry."

Thirty-four women were elected as delegates to the German National Assembly. The Majority Socialists elected 15, the Independents 3, the Democrats 5, the Clericals 7, and the Conservatives 4. The National Liberal party was the only party to elect none.

The editor of the Tokyo Miyako complains of the insignificant number of voters compared with the men organized for military purposes. He further contrasts his country's political advance by calling attention to Great Britain's 6,000,000 women voters as against 1,500,000, all men, electors throughout the Japanese empire.

The Board of Trade of New Zealand has about completed a scheme for standardizing to a large extent the manufacture of boots and shoes throughout the country; and it is proposed to fix the manufacturers' price and profit as well as the retail price. All standardized footwear is to be stamped both with the price and the official mark.

It has been decided to found in Edinburgh, Scotland, a school for international relations and foreign politics, which will be formally opened next January by the French Ambassador in London, and the secretary of the French Academy. Among other aims the school will endeavor to promote a study of foreign languages, develop closer intellectual intercourse with foreign countries, especially universities, and provide a central platform for lectures from foreign countries.

In a written reply to a declaration of the French association on the society of nations which recently called upon him, President Wilson makes known formally for the first time his intention to return to France after going to Washington for the closing session of the American Congress. In this reply, the President says that he accepts the suggestion that after his return to Paris a great public meeting be arranged in celebration of the conclusion of the work of the Peace Conference. It is believed that President Wilson is planning to return to France March 15. There is some belief in official circles that the Peace Conference will be able to complete its work by June.

With the Italian occupation of Trieste it is of interest to note that this city is the largest and most important port of the Adriatic. In 1913, for instance, the total movement of navigation in the harbor of Trieste amounted to 5,480,074 tons, representing 57.3 per cent. of the maritime movement of all that part of the Adriatic coast which has been included in Austria-Hungary. Trieste's imports, for the greater part by way of sea, amounted in 1913 to 38,022,000 quintals, valued at 3,460,600,000 crowns ($701,118,000). Of the 27,400,345 quintals of goods discharged in 1913 at the ports of Istria, Dalmatia and Friuli, about 20,423,197 quintals were unloaded at Trieste; while of the 25,338,854 quintals exported from these districts, 9,816,532 quintals were taken on at Trieste.

With the Wits

"Did old Skinflint leave much behind him when he died?" "I believe he left all he had."—Baltimore American.

"They seem to have a lot of trouble with their car." "Yes. Her husband is one of those expert accountants who imagines he was a born mechanic."—Louisville Courier-Journal.

"You were wonderfully steady when we went under fire for the first time." "It's no special credit to me, cap'n. I'm used to bein' shot at. I've been a Maine guide most of my life."—Washington Star.

Shapeleigh—I can't stand your extravagance any longer.

Mrs. Shapeleigh—You're most unreasonable, my dear. No one could get along with fewer clothes than I wear.—Town Topics.

Mrs. Flatbush—Did your children enjoy themselves at the neighbor's party yesterday?

Mrs. Bensonhurt—They must have. We've had a doctor twice to Beatrice and three times to Bobby today.—Yonkers Statesman.

The editor was handing it to the cub reporter. "This blaze occurred at a ball." "I know." "Remember, it was a full-dress affair, and don't—don't——" "I won't." "Don't say the guests rushed into the street scantily clad."—Kansas City Journal.

Little Leo—Pop, do you know that the earth is gradually getting colder and colder?

Mr. Corrigan—I do not, but I do know that that overcoat has got to do ye wan more winter, me son, gintle hints to the conthrary notwithstandin'.—Buffalo Express.

Mrs. Flatbush—There are two things my husband is afraid of.

Mrs. Bensonhurst—What are they?

Mrs. Flatbush—A gun and a cook.

Mrs. Bensonhurst—And the reason?

Mrs. Flatbush—He's afraid either will kick if discharged.—Yonkers Statesman.

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 25. SAN FRANCISCO, WEDNESDAY, FEBRUARY 26, 1919. Whole No. 2527.

THE ADVENT OF THE MOTOR SHIP

Petroleum---the Coming Factor in Shipping.

Chairman Edward N. Hurley, of the United States Shipping Board, in an optimistic article contributed to the Journal, calls attention to America's great natural advantage in having 65 per cent. of the world's output of oil.

Mr. Hurley thinks we are just about to enter upon the Petroleum Age, and that the successful operation of our Merchant Marine can be assured by taking due advantage of our resources and "putting our brains into the job."

The Journal deems it an honor and a privilege to print Mr. Hurley's instructive paper, in full:

The fast clipper ship was built of wood and propelled by sails. We had the timber to build that type of ship and the ingenuity to apply wind power and beat the world in speed. Those were the days of the Yankee clipper ships, and from Revolutionary times until 1861 we carried from 60 to 90 per cent. of our own world trade.

Then came iron and steel ships, with steam power. Great Britain led all countries in pig-iron production—the whole world output in 1860 was less than 8,000,000 tons, against 50,000,000 tons for the United States this year. As for steam, Emerson said then: "Steam is an Englishman." John Bull took first place in the new kind of shipping. The proportion of American trade carried in American ships steadily ran down to less than 10 per cent. at the outbreak of the world war.

To-day we are about to see another revolutionary advance in merchant ships, and the United States will again have some advantage—if we back natural resources with national ingenuity.

Petroleum is the coming factor in shipping. It will be used under boilers to raise steam. Better yet, it will propel internal-combustion engines of the Diesel type—the motor ship. We have an advantage in our large output of petroleum—65 per cent. of the world's output. And we are handiest to Mexico's supplies, now nearly 8 per cent. of the world production, with remarkable possibilities for increase, and two types of crude oil that are peculiarly suited to marine use.

In making a learned academic forecast of America's new Merchant Marine a German professor recently said: "In trading with other maritime powers it is right and proper that a nation should carry in its own ships at least 50 per cent. of its world commerce."

With petroleum, the motor ship, and American inventive genius and energy, we have reasonable prospects of again carrying our own exports and imports on this Germanic basis of fifty-fifty; but we must not rely upon natural advantages. Coal Oil Johnny will not do the work alone; we must put brains into the job—brains to the utmost.

Petroleum is about to effect a transformation in world shipping much more remarkable than that which was wrought by steam. The possibilities are fascinating. Both the oil-burning and the motor ship remove handicaps under which the merchant navies of the world have been steadily degenerating. They reduce operating costs, increase range and flexibility, overcome certain international political handicaps in shipping, and improve the living standards and morale of those who go down to the sea in ships.

Land transportation in practically all countries has been developed to a point where competition is regarded as wasteful. Competition probably played a useful part in days when railroads were being built; but, once laid down, it was agreed that competition in railroad operation, with its losses and bankruptcies, worked public damage. So for a generation the nations have been bringing their railroads under wise control for common welfare.

On the ocean, however, the nations have let competition run pretty much unchecked. After building their merchant fleets it might have been wise to work out some plan of international regulation. But, instead, they have fought each other on lines reminding one of our old railroad rate wars. They have used railroads, port privileges, bunkering stations and other auxiliaries to give their own ships the best of it and let the other fellow's ships have the worst.

They have done little to overcome by team work the violent fluctuations in ocean tonnage, rates, and profit. They have fought each other on a rate basis with very little fundamental knowledge of shipping costs. And the general result has been to make shipping a risky business for the investor and a thankless job for the seaman, and to run the world into a great crisis, with a shipping plant that proved inadequate and antiquated.

But the world has undoubtedly learned its lesson during the past four years. Peace will find it building bigger merchant fleets on modern lines. Petroleum will give new mechanical advantages and help to bring order into ocean transportation. If international wisdom can be applied to operation and wasteful competition eliminated, shipping may enter a new renaissance.

When Coal Oil Johnny steps aboard a merchant ship and takes charge of the engine room the transformation is great. The comparatively few shipping managers who have operated with petroleum will tell you that it is like switching from the one-hoss shay to a high-powered racing car.

Take the advantages found in the oil-burning ship with steam engines over the coal burner. There is a reduction in the number of men needed in the boiler room, first of all.

Some months before the "Lusitania" sailed on her last tragic voyage American petroleum experts examined her boilers and coal bunkers to make suggestions for converting her into an oil burner. They found this entirely feasible, and estimated that her fireroom force could be reduced 90 per cent. by the change—that is, one man out of ten would be needed. It has been said that the "Lusitania" started on her last voyage short of firemen, and that because she was running with only 70 per cent. steam efficiency the submarine was able to torpedo her. Had she been running at full efficiency with coal, or been fitted for oil burning, she might, perhaps, have escaped.

Next comes reduction in bunker space, with an increase in cargo space. A ton of oil takes five cubic feet less space than a ton of coal and gives 80 per cent. steaming efficiency against 65 per cent. for coal.

This works out to about 40 per cent. saving in bunker space, which is made available for cargo in a freighter. Moreover, there is a saving in quarters for the crew, because an oil-burning ship carries fewer men. Estimates for the "Mauretania" give a fireroom force of twenty-seven men for oil burning, as against 312 needed to burn coal.

Oil-burning vessels will make from 10 to 20 per cent. more mileage than coal burners. There is better control of steaming, because fires can be started and stopped instantly, steam raised quickly, and time in port saved through the greater ease of taking on oil as contrasted with coal. Coaling is always a dirty job and tedious, whereas oil is simply pumped into the double bottoms quickly and without fuss or muss.

There are other advantages: Oil is often cheaper than coal in actual dollars—prices vary widely, of course. Oil does not deteriorate in storage like coal. Oil eliminates the fire risk from spontaneous combustion in coal, and is not subject to the danger of shifting in rough weather as sea. Oil eliminates ashes and ash conveyors, smoke and soot, and the necessity for frequently painting a ship. Oil reduces the expense of grate repairs, corrosion of boiler plates, fuel-handling devices afloat and ashore.

Even more remarkable, however, is the increase in radius of ship operation and the possibility for planning profitable voyages without handicaps imposed by coaling. The coal-burning ship must stop frequently for fuel. Her nationality may put her at a disadvantage where foreign bunkering stations are used. At the best, coal-bunkering stations in other countries have always involved political complications. Even with the magnificent bunkering facilities afforded British ships, there are various parts of the world where the coal burner must steam a considerable distance, with little or no cargo, simply to take on coal—a well-recognized operating handicap.

But the oil burner has a radius of from two to three times that of the coal burner. Fast passenger liners burning oil for steam could almost make the round trip from New York to Europe and back, taking most of their oil on this side; and with freight steamers running at slower speeds, and burning less oil to the mile, it would be possible for them to go half round the world.

Coal Oil Johnny can give almost any coal-bufning steamer seven-league sea boots by a few simple changes in equipment—the instal-

lation of oil burners under the boilers and the conversion of coal bunkers or double bottoms into oil tanks.

But even that is only half his potential efficiency. Look a little farther ahead and design your ship to run with internal-combustion engines of the Diesel type, and he can double the efficiency.

The motor ship will operate on about half as much oil as the oil-burning steamer. Its engine-room force is reduced still more—from one to three men are sufficient; and there are no stokers, for the motor ship's mechanical staff is made up of skilled men. A Danish motor liner, the "Fiona," recently went clear around the globe, making a voyage of 32,000 miles, with only one engineer.

The largest motor ship yet built, the "Glenapp," recently made her trial trip in Scotland. She is 10,000 tons dead-weight, with two sets of Diesel engines, 6,600 horsepower. It is estimated she can make from twelve to fourteen knots an hour and run from London to Australia and back more than half way without replenishing fuel—that is, going by way of the Suez Canal. she could take oil in the Persian Gulf and run back there without replenishing; while by the Panama route she would take oil in the Mexican Gulf.

This means that, with the world's merchant fleets equipped entirely as motor ships, from 80 to 90 per cent. of the bunkering stations around the globe could be abolished; ships would require fuel only about twice in going around the world—or at an average of every six weeks. There need be no isolated fuel stations; oil would be taken on only where ships called for cargo or passengers.

Anyone who has made a voyage through the tropics will find it interesting to contrast this sort of ship with his recollections of coaling incidents. If his voyage was through the Suez Canal to Australia or India, for instance, he remembers the terrific heat and how only Chinese coolies can stand the temperature of the fire hold; and how the ship was coaled at Port Said by hundreds of women carrying baskets of fuel. Neither the motor ship nor the oil-burning steamer requires coaling. The engine room of a motor ship need be little warmer than the deck in the tropics; and besides, there is probably only one man attending the engines, and he is not performing hard manual labor nor is he in dirty surroundings.

The boiler room of an oil-burning steamer can be 25 degrees cooler than if coal were burned under the same boilers. For most of the heat in a fire hold comes from opening the furnace doors to throw in coal. There are no furnace doors when oil is burned. With coal, heat escapes every time the furnace door is opened and is lost for steam-making purposes. With oil, there is no furnace door to open and all the heat is used for steam making.

The Difference in Coal and Oil.

Two tramp steamers of the same tonnage leave New York for Santos, Brazil, calling at other ports on the way. One of them burns coal and the other is an oil-burning steamer. The coal burner makes the voyage in 24 days and 8 hours, while the oil burner makes it in 21 days and 13 hours—a saving of nearly three days, due to the fact that she runs one knot more an hour than the coal burner, owing to steadier steam pressure and greater speed secured with oil fuel. The coal burner needs 27 tons of coal daily, or 657 tons for the voyage. The oil burner needs 16.7 tons of fuel daily, or 359 tons for the voyage. A coal burner carries nine firemen and trimmers; the oil burner only three.

In normal times oil fuel for such a voyage might be either a little cheaper or a little dearer than coal. Suppose coal and oil cost the same. There will be a saving of $300 in firemen's wages for the oil burner and 700 dead-weight tons of bunker space for carrying cargo; which figures, at $5 a ton earn $3,500 on the voyage. So the oil burner yields $3,800 more to her owners and a saving of three days in time. On a year's operation the oil burner would probably make at least two voyages more than the coal burner, and these would be clear profit, except for fuel cost and port charges.

Two ships of the same tonnage went around the world, leaving Europe, rounding Cape Horn, touching at San Francisco, thence crossing the Pacific and going through the Suez Canal. One was a coal-burning steamer and the other a motor ship. The steamer stopped for coal fourteen times and burned 8500 tons on the voyage. The motor ship burned 1446 tons of oil and had capacity for carrying 1250 tons; so she might have gone nearly the whole voyage, starting with full tanks—actually she left Europe with 820 tons, and bunkered twice—in San Francisco and the Persian Gulf—but turned an honest penny by using some of the tank capacity to carry an oil cargo from one port to another.

The steamer made the voyage in 300 days; the motor ship in 236 days. The steamer carried 7500 tons of cargo; the motor ship 8500 tons. The cost of coal—normal times—was $41,275, and the cost of oil for the motor ship was $12,940—a saving of nearly 70 per cent. The coal burner carried fourteen stokers; the motor ship none. The motor ship carried an engine-room force of thirteen men as against nineteen for the coal burner. So there was a saving in fuel amounting to 70 per cent., a saving in time of more than 20 per cent. and an increase in cargo of nearly 17 per cent.

These figures become most significant when reduced to terms of early operating costs. Suppose each ship cost $1,000,000. The motor ship saved $28,335 on fuel alone in eight months. That amounts to about 4 per cent. annual interest on the entire investment in the ship.

And this is only a comparison of dollars on a coal-burning ship and a motor ship running on an old-fashioned coal burners' schedule. The coal burner spent 183 days at sea and 117 days in port. The motor ship spent 146 days at sea and 96 days in port. Because the world's cargo business is still organized on wasteful lines, with slow turn-round in port, the motor ship dawdled away more than three months in port; whereas, with cargo facilities organized on a motor-ship basis, her greater radius and flexibility in operation would have made it possible to save much of this time. If the maritime world can tackle this one item of waste after the war, it may go far toward paying off the world's war debt.

"Morale" in the Ship's Crew.

And the cost sheets do not show that other great item of betterment—morale in the ship's crew.

The world's shipping before the war had got into such desperate straits in morale that the men who go down to the sea in ships were seldom able to marry and maintain families. There are some British figures that show this condition in a striking way. About 60,000 British seamen living in the United Kingdom come under the health-insurance law. This law provides a maternity benefit when a child is born in a seaman's family. With a birth rate of about twenty-five children annually, which is a general average, 60,000 seamen, if married, should claim 3,000 maternity benefits yearly.

Actually less than 800 maternity benefits a year are said to have been paid to British merchant seamen's families in normal times; and this is said to indicate a world-wide condition among merchant sailors. It shows one of the world's essential industries disintegrating through blind competition, and in my opinion the remedy must be some form of international system, if not control, and a building up of wages, skill and morale which will give the seaman a home and a family, like the railroader or machinist.

With the motor ship we can have an entirely new era in ocean transportation. It calls for skill and effects economies that will yield good wages; and its flexibility and speed should facilitate rearrangement of the world's shipping routes, so the seaman may get home more frequently and have a home worth getting to.

The motor ship is here. But it still needs development and application. Thus far it has been built chiefly in small-tonnage freighters running at moderate speed. These have been highly successful economically; but there are still certain shortcomings in machinery and organization to be dealt with.

The Diesel engine must be freed of some defects that have appeared under the stress of ocean voyages, and must also be built in larger units to furnish greater horsepower for bigger ships running at higher speed. The problems are now entirely questions of engineering, and American ingenuity should prove adequate to develop the fast motor liner for passenger traffic.

This type of engine was invented by Dr. Rudolf Diesel, a Bavarian engineer. The difference between an automobile engine and a Diesel engine is, generally, that all the fuel in an automobile engine cylinder is burned at once, while in a Diesel engine it is burned gradually, and so gives power more like the steam engine. Air is compressed in Diesel cylinders under great pressure, and then the fuel, consisting of crude petroleum or other heavy oils, is forced into the compressed air by greater outside pressure. This raises the temperature for the air in the cylinder and turns the oil into a gas.

The pressures in a Diesel engine are so much greater than those in a gas engine that when Dr. Diesel placed his first engine on the test block, in 1893, it exploded and nearly killed the inventor, not being sufficiently heavy in construction.

The Diesel engine has been widely applied in Europe for stationary power plants. But its application to ships has been difficult. This requires engines of very heavy construction; and as the mechanism for the gradual introduction of the fuel into the compressed air in the cylinders is intricate, the motor ship involves valve problems of its own.

Scandinavians Most Successful.

The Scandinavians have made the greatest progress in motor ships, and the most successful Diesel engines on the ocean to-day are built by the Danes, Swedes and Hollanders, or under their patents. We have built some motor ships, as have the British also. But certain difficulties, to be overcome by wider experience in designing the engines and operating the ships, have retarded the development of this type. However, there are now prospects of active development for the motor ship in both this country and Great Britain.

The British especially are very much interested in this new type of ocean ship, and their splendid technical achievements in naval vessels during the war have given them new methods and a splendid new shipbuilding industry, which will be of great benefit in restoring the British merchant marine as soon as peace returns.

And that is as it should be and what every broad-minded American will rejoice to see; for the British merchant marine, no less than the British Navy, has played a leading part in keeping the world free.

If the world should turn during the next ten years from coal to fuel oil, and from steam to the motor ship, the question of petroleum supplies will become important.

At present the largest marine consumption of petroleum in the world is probably that of the United States Navy, estimated at 5,000,000 barrels yearly under war conditions. This quantity would not go far in operating an American merchant marine of 25,000,000 tons. Data upon which to figure consumption for such a fleet, with types of passenger and cargo ships running at various speeds and in various classes of service, are not yet very ample. But engineers have adopted a rough-and-ready ratio, estimating one ton of oil yearly to a ton of dead-weight shipping, where the fuel is burned for steam, and half a ton yearly for motor ships.

On this basis the American Merchant Marine alone would require 150,000,000 barrels yearly for steam, or 75,000,000 barrels for motor ships. The world's ocean tonnage was 50,000,000 tons before the war, and under the improvement and cheapening in transportation, made possible through petroleum, might increase to 75,000,000 tons within the next five or ten years, this estimate including our own merchant marine.

Thus, for 75,000,000 tons of motor ships there would be required yearly somewhere between 200,000,000 and 250,000,000 barrels of crude oil. This is approximately half of the world's total present production, and more than 80 per cent. of our own production.

Where is the oil to come from?

Fortunately nature has stored supplies in the earth for precisely this situation. Mexican petroleum is peculiarly suited for marine use. In the district round Tampico, which has been the scene of petroleum development for the past eighteen years, there are two types of crude oil taken from opposite sides of the Panuco River, which runs through Tampico and divides the district. The northern type of oil is a heavy crude oil that cannot be refined but is suitable for burning to make steam. The southern type of oil is lighter. When refined this yields about 12 per cent. of crude gasoline and is suited for Diesel engines.

No such oil field has yet been located in any other part of the world. The Tampico district now has about fifty wells in production, with an estimated capacity of 1,500,000 barrels daily—more than twice as much oil as would be needed to operate the world's merchant fleets and navies.

It is true that Mexico at present produces only from 50,000,000 to 60,000,000 barrels yearly; but this represents simply the quantity that can be handled in available pipe lines and tank steamers.

The Rich Mexican Oil Fields.

The Tampico district is less than 150 miles long and fifty miles wide; but it lies over enormous reservoirs of oil and is considered but part of a general oil region 1600 miles long and from seventy-five to one hundred miles wide. Prospectors have also found promising oil indications in Guatemala, Venezuela, Colombia, Ecuador and other parts of Latin America.

Within the next generation, and perhaps the next decade, the world seems certain to enter a new era—the petroleum age. Oil will be widely used for industrial power and heating all over the globe. Already there is a marked diversion to oil fuel in industrial centers along the Atlantic seaboard.

It is estimated, roughly, that one man can produce 300 tons of coal yearly, while the same man might produce 7,000 tons of oil. This great multiplication of human power is a benefit that will irresistibly make its own way, and, besides greater results for men's work, there are the additional advantages of clean industrial towns, more agreeable working conditions, better morale, and better living all round.

It is so very much worth while to bring the world into this petroleum age that development of new oil resources all over the globe will be one of the chief activities of peace. The world needs Mexico's petroleum for its growth and comfort. Under the earth in the Tampico district are resources capable of influencing the history of the world.

Out of the lessons of international adjustment and team work taught the nations by war they will unquestionably find methods of making the Mexican oil supply available to mankind—methods which will not only be entirely fair to the Mexican people but which will bring them stability, growth and prosperity.

The trouble among the shipbuilders in Scotland seems to be driving some of the interests from Scotland to America. Harold E. Yarrow, who is managing director of the works of Yarrow & Company, shipbuilders and engineers, is in America at the present time, making arrangements for the transfer of a part of their Clyde shipbuilding plant from Scotland to the Pacific Coast. The intention is to increase more and more their holdings and their interests in British Columbia.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Huge Ship Profits Shown by Unionist.

The strike of shipbuilders against the Macy award, which includes several localities, is not a rejection of arbitration or conciliation methods, according to James A. Taylor, president of the Seattle Metal Trades Council. He says the shipbuilding unions were given authority by Mr. Piez (Shipping Board) last month to negotiate separate agreements with ship yards if they desired to do so.

Secretary Swain of the Metal Trades Council has made public these figures on the profits of shipbuilders:

"In 1917 the Government paid the Seattle yards $145 per ton for ships. At this figure the builders were able to pay an increase of $1.75 per man per day. This amounted to $7.50 a ton, or $66,000 per ship of 8800 tons.

"In July, 1918, the builders were paid $167.50 per ton, and admitted that the cost of construction, covering everything, was $1,000,000 per ship.

"An 8800-ton ship at $167.50 per ton brought the builder a price amounting to $1,474,000. Taking the admitted cost of construction from this amount there was left a net profit of $474,000. If the rates asked by the Metal Trades Council, amounting to an increase of $66,000 per ship, had been paid, the builders would have had a net profit of $408,000 on last summer's figures.

"It is admitted that the builders at the present time are getting $186 per ton; which for an 8800-ton ship means a price of $1,636,800. It is further admitted by the builders that the present cost of construction of these ships is $1,350,000. This allows a profit of $286,000. If the full demands of the men were met the builders would still have a net profit of $200,800 per ship at the present time.

"The Skinner and Eddy corporation sold two ships to Japanese interests for the sum of $5,000,000. The admitted cost of each ship was $1,000,000, which gave the firm a net profit on that one deal of $3,000,000."

"Can't Strike" Law Flouted in Canada.

The Canadian law which prohibits strikes and lockouts on public utilities until a Government commission investigates is being disregarded by workers and employers, reports the Bureau of Labor Statistics in a survey of this legislation, printed in Bulletin No. 233. The law has been denounced by organized labor in Canada.

The period covered by the survey is from March 22, 1907, when the act became effective, to December 1, 1916. During this time 222 strikes and lockouts, affecting 100,608 employes and occasioning a time loss of 4,838,467 working days, occurred in industries within the scope of the act. Of these 91.9 per cent. of the strikes and lockouts, affecting 79.8 per cent. of the employes and occasioning 62.3 per cent. of the time loss were illegal.

The report shows that little attempt has been made to impose penalties because of these illegal acts. In all, charges have been laid against nine employes for encouraging illegal strikes, against eleven employes for going on strike illegally, and against three employers for declaring illegal lockouts. In the case of eleven employes the charge was either dismissed or withdrawn, in the case of nine employes the charge was sustained, charges against two employers were sustained, charges against one employer were dismissed.

The aggregate of fines imposed, exclusive of costs, was $1600, as against an aggregate of $30,000,000 which would have been incurred if the minimum penalty had been imposed, or of $150,000,000 if the maximum had been imposed. This does not include violations of the provision against inciting to illegal strikes.

The report shows clearly that the restrictive and penal provisions of the act have been disregarded by those against whom they were directed and without any serious attempt being made by the public or by administrative agencies to impose the penalties provided for violation.

"Repeated violation of these provisions," it is stated, "must inevitably reflect upon their enforceability and foster such a disregard for the act as to lessen its usefulness even as a conciliatory measure."

Railroad Officials Shirk.

American Federation of Labor Railway Employes' Department officials call upon members to give their full support and co-operation to the Railroad Administration in making Government control a success. Railroad shop employes are warned not to be misled by the temptation being offered to evade their obligation of doing an "honest day's work."

"Many reports are reaching this office," it is stated, "which bear conclusive evidence of designs on the part of the railroad officials to discredit Government control by every means within their power, even to the extent of encouraging idleness in the shops.

"In many instances it is reported there is a total indifference on the part of the subordinate officials as to the output of work, although for some reason the force of supervisors has been materially increased with fat salaries, all of which will contribute toward the deficit charged against the Government operation of the roads and so much prated about by those who formerly managed them so successfully in the interests of a few and succeeded so well in getting out of them 'all the traffic would bear.'"

Shortage of United States Homes.

The Department of Labor states that in normal times the building of about 600,000 homes a year is required to supply the normal growth of the country and replace losses occasioned by fire and other destructive agencies. For the past two years this normal construction has been practically suspended. What housing construction has been accomplished has been mainly to meet war conditions. It is stated that there is a shortage of nearly 1,000,000 homes in America.

World's Workers

The Consul-General of the Netherlands in London recently appealed to Mr. Ben Tillett, secretary of the Dockers' Union, to request him to use his influence with the dock-workers at Fowey in Cornwall, who, according to representations made by the Netherlands Vice-Consul at Fowey, had refused to load the Netherlands steamship "Eomstroom" as a protest against the former Kaiser of Germany being allowed to remain in Holland.

Industrial unrest continues to seethe in Spain. The fact that constitutional guaranties have been suspended in Barcelona has only added fuel to the flames. The Government, to meet the situation, now declares that it has determined to carry through the necessary social reforms, including the regulation of hours of labor and a minimum wage. While the Government is thus making promises, the syndicalists are busily organizing and are making plans for a general strike.

The recent Paris conference of French port and dock workers, after a thorough discussion of the situation confronting their industry, has decided to demand an eight-hour day and the abolition of night work, according to Le Populaire. The conference fixed 15 francs per day as the minimum salary for eight hours' work, overtime being paid at the rate of 3 francs per hour. Half-day wages are granted whenever a worker, through no fault of his own, is compelled to cease labor after less than four hours.

The Socialist party of Hungary has asked the Council of Workingmen's Deputies to convene, because the Socialist members of the Hungarian cabinet declare themselves unwilling any longer to share the responsibility for the policy of the Government. Among the reasons advanced by the Socialists for their present position is the fact that the Government seems determined to suppress Bolshevism. The Socialist members declare themselves unwilling to support this move. It is regarded as likely that the workingmen's council will decide to request the Socialist ministers to leave the Government.

One of the first measures adopted by the new government of Germany established an eight-hour work-day. The law, issued by the national government in Berlin, places the responsibility for administration upon the various State governments. In all factories and workshops, and in all commercial establishments, the hours of work for both men and women may not exceed 48 per week. In all other industries, the employers or the employees may apply to the Minister of Labor and Economics for the introduction of the eight-hour day. No reduction in salary or wages is permitted under the law, even though the working day may be reduced through its operations. Idle days, for which the worker is not responsible, are paid at regular salary or wage. The law also contains the following clause: "Employers who rudely, carelessly, intentionally or maliciously violate the above regulations, are liable to severe punishment and shall be deprived of the right to manage their establishments."

Indigestion, Bloat, Heartburn, Caused by Acid-Stomach.

What is the cause of indigestion, dyspepsia, bloat, heartburn, food-repeating, belching, gassy, sour stomach, and so many stomach miseries? Just this—acid-stomach superacidity as the doctors call it. It robs millions of their full strength, vitality and the power to enjoy life—to be real men and women.

It is well known that an acid mouth destroys the teeth. The acid is so powerful that it eats right through the hard enamel and causes the teeth to decay. This is fair warning of what excess acidity will do to the delicate organization of the stomach; as a matter of fact, excess acidity not only produces a great many painful and disagreeable symptoms that we generally name "Stomach troubles," but it is the creator of a long train of very serious ailments. Acid-stomach interferes with the digestion and causes the food to ferment. This mass of sour, fermented food passes into the intestines, where it becomes the breeding place for germs and toxic poisons, which in turn, are absorbed into the blood and distributed throughout the entire body.

Wherever you go you see victims of acid-stomach—people who, while not actually down sick, are always ailing—have no appetite, food doesn't digest, belching all the time, continually complaining of being weak and tired and worn out. It is the excess acidity that takes the pep and punch out of them; leaves little or no vitality.

Strike at the very cause of all this trouble and clean this excess acid out of the stomach. This will give the stomach a chance to digest the food properly; nature will do the rest.

A wonderful new remedy removes excess acid without the slightest discomfort. It is called LAXCARIN, made in the form of tablets—they are good to eat—just like a bit of candy. LAXCARIN literally absorbs the injurious excess acid and carries it away through the intestines. It drives the bloat out of the body—you can fairly feel it work.

Try LAXCARIN and see how quickly it banishes bloat, heartburn, belching, food-repeating, indigestion, etc. See, too, how quickly your general health improves—how much more of your food is digested—how nervousness and irritability disappear. Learn how easy it is to get back your physical and mental punch. Have the power and energy to work with vim. Enjoy the good things of life. Learn what it means to fairly bubble over with health.

Sold Exclusively By The

Pacific Coast Marine.

The British steamship "British Columbia," ex "Onyx," 557 tons gross, 222 net, built at Bowling in 1903, and owned by the Coastwise Steamship & Barge Company, Ltd., Vancouver, B. C., has been sold to Union Steamship Company, Ltd., Vancouver, B. C.

It is announced that the United States Government will lay a cable line from Crescent City, Cal., to St. George's early this year. The cable, which will weigh about fifty tons, will be about six miles in length and will enable the display of weather signals at St. George's Reef Lighthouse.

Beginning in the near future, the Union Steamship Company will operate two passenger steamers between San Francisco and Australia and New Zealand. The "Paloona," which operated only in the freight service, will begin to carry passengers. This vessel sailed from Wellington during the week with a good list of passengers, and will take travelers from this port.

The Skandia Shipbuilding Company has been organized on the Pacific Coast with a capital of $100,000. The promoters of the concern are Victor Anderson, William Strang and John Backman. The stockholders in general are said to be Finns, Swedes and Norwegians. It is the purpose of the company to conduct a cooperative shipbuilding plant and the rumor is that it will either buy or lease the Coos Bay Shipbuilding Company's plant.

The south jetty at Humboldt Bay was seriously damaged by storms of the past two weeks and the north jetty also suffered. Further erosion from the channel side of North Spit has further endangered the fog signal station. Apparently the damage to the south jetty must be repaired this year if the present chanel and depth of water are to be maintained. A long section of track was washed away with an inshore portion of the top of the north jetty.

The Blue Funnel freighter "Eurypylus," Captain Hill, arrived at San Francisco from Liverpool during the past week, after a passage of twenty-eight days, via Balboa and the Canal. This is the first of the fleet to return to the Pacific service since the service was disrupted by the war. The vessel came in ballast. Dodwell & Co., agents for the line here, say that there will be one sailing a month in the future. If the freight conditions warrant it, the srevice will be increased later.

Another attempt to raise the steamship "Corona," which was lost about nine years ago at the Humboldt bar, has resulted in failure. The derrick, boom and other tackle used in trying to move the vessel out of the sand are on the way south. C. P. Doe purchased the "Corona" a few years ago from the owners. Failing to get the hull up, he sold it for $5,000 to a Ferndale man. The Ferndale man engaged the Little River Lumber Company's steamer "Washington" to work on the wreck. The hull of the vessel is of steel.

Patrolling of the waters of the Bering Sea by the cruiser "Vicksburg" and a flotilla of submarine chasers will be begun early in March, Rear Admiral William F. Fullam announced during the week. Admiral Fullam has recommended that the submarine chasers, now being outfitted for the Alaskan cruise at the Bremerton Navy Yard, have their hulls sheathed with copper before starting for Juneau. The "Vicksburg" and other craft will take the place of the Coast Guard cutters which formerly patrolled the Alaskan Coast.

Announcement that the United States Bureau of Fisheries will establish an experimental plant at San Diego to standardize the annual pack of sea foods was made by the San Diego Chamber of Commerce on receipt of a telegram from the Bureau. Dr. Norman Hendrickson, Director of Investigation for the Bureau of Fisheries, with headquarters at San Francisco, is expected here with complete plans for the station. He advises that the complete equipment for the plant has been ordered. For the present the equipment will be installed in a local packing house.

All members of the new Congress who are on naval committees in both Houses will visit San Francisco and the bay cities about March 20 on an inspection trip of all important Coast fortifications, naval bases and ports, for the purpose of shaping future legislation. The party will be welcomed by Chambers of Commerce on the Coast and will be the guests of these organizations while on the Coast. The party will arrive in San Diego about March 15 and will go over the whole Coast line from Mexico to British Columbia. They will pass two or three days in San Francisco, Oakland, Alameda and surrounding country.

"Puffed bricks" are the latest innovation in ship construction. The idea is being used at the San Francisco Shipbuilding Company's plant on Government Island, where the second concrete vessel of the Government's construction program is to be launched on March 15. The "puffed brick" from which the ship is being built is made of clay, intermixed with silica. When compressed and subjected to heat, the bricks puff up considerably larger than their compression size. They are then ground, moistened and worked into a concrete mixture. The "puffing" process renders the bricks light and of high tensile strength.

Frank P. Helm, San Francisco shipping broker, is not satisfied with the verdict for $12,500 damages which a jury in the United States District Court recently awarded him against the American-Hawaiian Steamship Company. During the week his attorneys filed a petition for a new trial, alleging that the damages awarded were not adequate, in view of the evidence adduced at the trial, and that the verdict of the jury was given under the influence of prejudice. Helm sued for $700,000 damages, alleging breach of contract. According to his complaint, he made a contract with the steamship company in February of 1916 to charter the steamship "Floridian" for two round trips to the Orient. Later, he said, the company refused to charter the vessel to him.

Censorship restrictions on normally routed cablegrams and radiograms originating and terminating in the United States and Alaska and the island possessions have been removed, according to an anouncement by Lieutenant-Commander William B. Dunning, naval cable censor in San Francisco. "Under this order, cable communication between the points mentioned may involve the use of private code, hitherto forbidden foreign languages, code signatures and such other cost-saving arrangements as the cable user may desire to adopt, with the approval of the cable companies," Commander Dunning said. "This order has been issued under the instructions of the Chief Cable Censor in Washington. Its object is the reduction to the minimum of censorship interference with legitimate American business." The restrictions have not been removed from messages not routed normally. At present the Commercial Pacific Cable is interrupted between Honolulu and Midway, and messages that normally would go over that cable must be routed through British censorship stations.

As the outcome of negotiations carried on by the Canadian trade commission for the past month, the Timber Controller of Great Britain will purchase in Canada half a million standards of lumber, equivalent in the Dominion to 1,000,000,000 square feet. The lumber, which is to be of all grades, will be bought under the direction of the Timber Controller through British brokerage houses and Canadian timber agents in London, who will deal direct with the Canadian lumber producers. It is understood that every Canadian producer who is registered on the lists of the trade board at Ottawa will be given an equal opportunity to sell. There is also to be an allocation of purchases upon a territorial basis, thus insuring a fair proportion of purchases to western Canada. All the British Columbia lumbermen are represented by L. C. Beale, timber commissioner for the Province, and he will deal directly with the Timber Controller. This lumber is to be bought within the next twelve months. It will represent a total transaction in money value of about $40,000,000.

Somewhere in the North Atlantic a sailor in one of the small boats of the wrecked steamer "Frederick" cast into the sea a bottle containing this note: "I die today. We all perish." The bottle was picked up off the coast of Scotland. In the ports that knew the "Frederick" its message was taken to mean that the old vessel—the steamer was built in 1876—had lost her long fight with the seven seas and had gone down. On the strength of that message, Mrs. Eda Harrison Davis, sister of Joseph Harrison, first officer on the "Frederick," residing at San Francisco, has received letters of administration on her brother's estate. It consists of a suit of clothes valued at $25, left ashore by the sailor. The message in the bottle, according to Charles R. Holton, Mrs. Davis' attorney, will be the basis of suits in the New York courts to force owners of the "Frederick" to pay damages for the lives of sailors lost when the old steamer went down. It is charged that the "Frederick" was unseaworthy when she sailed out of Portland in the winter of 1916. Mrs. Davis sought letters of administration to enable her to file suit for damages for the death of her brother.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.
Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

ALLIED PRINTING TRADES LABOR COUNCIL SAN FRANCISCO

WEDNESDAY, FEBRUARY 26, 1919.

SEAMEN OF THE WORLD UNITE.

According to the latest reports from London, England, the convention of the International Seafarers' Federation, which was called to order on Monday of this week, is having a large and representative attendance.

The communication received expresses confidence that in addition to the American and British delegates there would be representatives from Norway, Sweden, Denmark, Holland, Belgium, France, Spain, Italy and possibly from Greece. The organized seamen of Australia, New Zealand, Japan and Argentine were also said to have made arrangements for representation.

The program or "agenda" for the meeting, prepared in accordance with the European custom, is as follows:

1. President's Address.
2. Election of Credential Committee.
3. Report of same.
4. Secretary's Report and Financial Statement
5. Correspondence.
6. Report of American Delegates on the American Seamen's Act of 1915, its effect and influence on the welfare of seamen.
7. Delegates' report as to position of seamen in the various countries represented.
8. Objects of Federation regarding uniform rate of wages. Manning Scale, Food Scale, etc.
9. Committee to be appointed to consider ways and means to give effect to recognizing Union Cards in any part of the world and as to payment of contributions and benefits to be paid to members of Affiliated Organizations. Committee to report to Conference during session.

From the foregoing it is evident that the conference now in session in London is of momentous importance to the future welfare of seamen everywhere.

Never before in history has there been a gathering of this kind. There have been international conferences of organized transport workers, but in all such meetings the organized seamen have been in the minority, both as regards delegates present and numbers represented.

This conference is therefore truly the first real international conclave "of seamen, by seamen, for seamen."

In this connection, it should be decidedly reassuring to know that the seamen of America are represented by two of their ablest and universally trusted men.

Andrew Furuseth and Patrick Flynn, the two U. S. delegates, will command respect and attention in any gathering. And it is a foregone conclusion that the broad experience and intimate knowledge of details with which these two veterans in the movement are so happily endowed will be used to the best interest and advantage of seafarers the world over.

THE FARMERS' ATTITUDE.

The "boughten" press of America never misses an opportunity to create the impression that there is a deep, unbridgeable gulf between the organized farmers and the labor unions of the cities.

It is, of course, to the interest of "business" to keep this fiction alive just as long as possible. For, when the truth is once thoroughly understood it will be a sad day for those who live not by producing anything, but by buying and selling what others produce.

Happily, the farmers of the United States and Canada, under the stimulus of "war necessity" have done some real thinking along economic lines. At any rate, one is justified in reaching such conclusion after reading the tentative program on Reconstruction drafted by the special joint committee of the leading farmers' organizations in November and unanimously adopted by the Farmers' National Conference on Reconstruction in America, held recently at Washington, D. C. This Conference was attended by representatives of State Granges, State Farmers' Unions, the American Society of Equity, the Ancient Order of Gleaners, the National Non-partisan League, and a number of smaller organizations. The program adopted includes the chief measures, legislative and administrative, which united farmers will seek to have adopted as the permanent policy of the country. It can accurately be designated the fighting reconstruction program of the forward-looking farmers of America.

Not the least important section of the program is the one appearing under the caption "Labor and Wages," as follows:

> The dislocation of industry necessarily occasioned by the whole-hearted commitment of this country to the sole purpose of winning the war presents problems requiring careful Governmental action. The principle must be fully established and universally recognized that labor is the first fixed charge upon all industry, taking precedence of the claims of property and investment in business and commerce. This is essential to securing the well being of our people, and the industrial and economic democracy for which our men have striven. Living wages to those engaged in industry, commerce, trade, mining, railroading, and in all other legitimate activities, are a direct benefit to farmers because they increase the purchasing power of those so engaged, and not only increase the efficiency of these workers, but provide the most economic and advantageous market for farm products—a home market.

The Canadian farmers, also, are on record upon this subject. The organized farmers of Canada, through the Canadian Council of Agriculture, have just declared in clear and unmistakable terms for the establishment of democratic government in Canada, and have demanded legislation from Parliament to bring about the desired end.

The Canadian farmers' attitude toward organized labor was forcefully expressed in the following language:

> That this Council expresses its cordial sympathy with organized labor in its demand for economic justice, and that we encourage the various organizations affiliated with this Council to become better acquainted with the labor organizations and the labor problems of Canada with the purpose in view of finding a common ground for mutual effort.

All of which should be most encouraging to the real producers of wealth, everywhere. When the farmers and the toilers of industry begin to understand each other and actually express a sympathetic viewpoint toward each other's problems there is hope, indeed, for a better and brighter future.

THE "SHOP COMMITTEE."

The growing demand of the workers for shop-control has taken definite shape in the shop committee system of adjusting working conditions. The idea is spreading fast both in this country and in Great Britain. Indeed, such headway has it made in the latter country that the Government has had to take cognizance of it and, by act of Parliament, recognized the right of the workers to at least an equal voice in the control of the actual mechanism of production.

As explained in the awards of the Shipbuilding Wage Adjustment Board, published in a recent issue of the Monthly Labor Review of the Department of Labor, the system works out as follows:

> The employes of each craft in a shop or yard have the right to select three of their number to represent them as members of a shop committee. Each member of this committee is chosen for a term of six months by majority vote through secret ballot. Vacancies for an unexpired term are filled by ballot. Members of an outgoing committee are eligible for re-election. The chairman of each shop committee is a member of a joint shop committee. The joint shop committee, by ballot, selects five of its members to act as an executive committee to represent it in conference with the superintendent or higher officials of the company. In contested cases, the district examiner decides as to the validity of the election of a shop committee and supervises a new election when he deems such new election necessary.
>
> When a grievance arises it is taken up by the craft or laborers' committee with the foreman or general foreman. Failing an adjustment, the craft or laborers' committee may then take it up with the superintendent, and may call in the assistance of a representative chosen by the committee to confer over the grievance with the superintendent or the higher officials of the company. If the grievance concerns more than one craft it is handled through the joint shop committee, first with the superintendent, and then, failing a settlement, with the higher officials of the company. In such conference with the superintendent or higher officials, the joint shop committee has the right to call in the assistance of a representative chosen by the committee. In case such conference fails to result in a satisfactory adjustment, the grievance is submitted to the district examiner.
>
> Any committee elected in accordance with the provisions of this section who is found to have been discharged without just or sufficient cause, after due investigation in the manner herein provided for the adjustment of grievances, shall be reinstated with full pay for all time lost.

Reduced to its essentials the idea means that the workers in a shop, independent of their craft affiliations, combine and elect a committee on shop management, headed by a "steward" whose business it is to see that the instructions of the workers are carried out.

It is claimed for the shop committee system that it is founded on the principle of the historic New England town meetings, the most democratic form of self-government ever devised. That it is effective in guarding the workers' interests has been abundantly proven. Indeed, it is conceivable that a federation of all the shop committees in one industry would practically hold the fate of that industry in the hollow of its hand.

Anyway, the shop committee idea has developed both here and in Great Britain to the point where it must be reckoned with as an accomplished fact. Taken by and large it seems to be the natural expression of industrial democracy. That it will be heard from more and more as time goes on is tolerably certain. As one writer says: "Much of the immediate future of the labor move-

ment will be a record of the impact of this new organization form on the employing class on the one hand, and on the other hand upon those trade organizations with which we are more familiar."

U. S. EMPLOYMENT AGENCIES.

Strenuous objections have been made against further appropriations by Congress for the United States free employment bureaus.

It is urged that private employment agencies can just as well perform this service. So they can. And so they have done for many years—at a handsome profit.

The United States Employment Service during 1917 placed 168,066 workers in permanent and profitable employment, or more than were placed altogether in the nine preceding years. During 1918 the Employment Service placed 3,099,295.

All of this service was rendered entirely "free." If the same service had been rendered by private employment agents millions upon millions of dollars would have been extorted from the before-mentioned applicants for jobs.

So far as seamen are concerned Uncle Sam long ago eliminated the sharks who used to collect their toll from each mariner for furnishing him with a job aboard ship.

Since 1898, by the terms of the White Act, it has been unlawful to "demand or receive, either directly or indirectly, from any seaman or other person seeking employment, as seaman, or from any person in his behalf, any remuneration whatsoever for providing him with employment."

The United States Supreme Court, by a "five against four" decision, decided not long ago that similar legislation designed to protect the workers ashore was unconstitutional! There is nothing to prevent the various States, however, from levying a high and prohibitive tax upon employment agencies operated for profit. And it is certainly to be hoped that no arguments, so far advanced in behalf of the land sharks who conduct private employment bureaus, will change the declared attitude of Congress to continue in operation the free public employment bureaus so successfully managed under federal auspices.

IN MEMORIAM.

The following self-explanatory resolution anent the recent, untimely death of Charles Larsen, for years a trusted official of the Alaska Fishermen's Union, was unanimously adopted at a recent meeting of that organization:

Whereas, It has pleased Almighty God to call from our ranks, Charles Larsen, one of the organizers and most esteemed members of the Alaska Fishermen's Union, whose earnest efforts in the cause for which we strive was at all times of a quality which endeared him in the hearts of us all; and

Whereas, His devotion to Labor, and the Alaska Fishermen's Union in particular, compels us to realize his excellent worth and our own great loss; therefore be it

Resolved, That the Alaska Fishermen's Union, in meeting assembled, February 14, 1919, express our profound sorrow for the departure from among us of our faithful comrade Charles Larsen; and be it further

Resolved, That we tender our sincerest sympathy for the bereavement of his friends and members of his family, who have suffered a loss that is overwhelming.

The union label is an organized expression of our labor movement. Protect it at all times and foster it.

SEAMEN'S RIGHTS IN HAWAII.

A Dignified Reply to Inspired Attacks Upon An Attorney Who Has Successfully Pleaded for Seamen.

To the people of the Hawaiian Islands and all those interested in the administration of justice:

During the recent past two daily newspapers in Honolulu, to-wit: the Advertiser and the Star-Bulletin, have printed highly colored and sensational articles followed by editorials directed against the bringing of suits by seamen to enforce their rights in the United States District Court of this Territory. Prior to the Act of July 1, 1916, passed by the United States Congress, wherein it is provided "that courts of the United States shall be open to seamen without furnishing bonds or prepayment of or making deposit to secure fees or costs for the purpose of entertaining and prosecuting suit or suits in their own name and for their own benefit for wages or salvage and to enforce laws made for their health and safety."—39 U. S. St. L. 313.

I had adopted the practice when a case came to me free from any improper source of preparing a libel accompanied by an affidavit that the seamen were wholly unable by reason of their poverty to furnish any bond or security for costs when such an affidavit could be properly made. This practice was approved of by Judge Dole, the then United States District Judge in the case of Weidman vs. The Nebraskan, 3 U. S. District Court Reports, pages 195, 196, 197, 198 and 199, and I quote from his decision. "in every regularly documented American vessel the crew who navigate it will find their protection in the flag which is over them, Webster's Works, Vol. 6, page 325. This rule, that the vessel being an American is evidence that the seamen on board are such, is now an established doctrine of this country; and in support of it there is with the American people no diversity of opinion and can be no division of action." In re Ross, 140 U. S. 453-479.

Not only did the learned judge sanction the bringing of these suits by American seamen but by foreigners who were members of the crew of an American vessel.

During the ten years that I occupied the position of United States Commissioner I pursued the same practice and was appointed proctor for the libelant by an order of the judge and my fee was awarded by the court, and I never received a contingent fee in such a case during my whole term of office or at any other time in such cases, neither did I employ any runner or give any commission to any person or persons for the purpose of securing seamen as clients, nor engage in any other unethical practices in connection with any of these suits, and the charges made by these sensational articles and editorials in the said newspapers are wholly false and unfounded so far as I am concerned. I pursued a clean and straight course and since that practice met with the approval of both of the judges of the United States District Court whose decisions were almost invariably sustained by the United States Circuit Court of Appeals for the Ninth Circuit it is unnecessary to offer any apology or to even feel the slightest consciousness of doing anything except my duty as a proctor of the United States Court.

Congress passed the Act of July 1, 1916, so that seamen should at all times be heard before the courts and they could not be heard nor the provisions of the act carried out without having counsel to represent them and to institute proceedings in their behalf. A criminal accused of the crime of high treason or of murder has the right to employ counsel and if he is unable to do so the court appoints a counsel to represent him. He has a right to be heard in his defense and it is indeed passing strange that these newspapers will endeavor by such articles and editorials as have lately appeared in their columns to try to intimidate the members of an honorable profession from endeavoring to carry out the provisions of an act of the United States Congress, the supreme law-making body of the Republic.

In the last two cases in which I was engaged by the seamen and appointed under an order of the court in one, and in the other was requested to act by a reputable brother attorney, there was absolutely nothing to justify even an insinuation that I had not received my engagement in a manner that was both commendable and in strict accordance with the ethics of the profession. I refer to the case of Babcock and others vs. the S. S. "Annette Rolph" and the case of J. Kuhne and others vs. the S. S. "Oakwood."

In the case against the S. S. "Annette Rolph," I was appointed by the court as proctor for the libelants and the case is now pending before the United States District Court. Process was issued against the vessels and a bond could have been furnished immediately, the evidence could have been taken and the vessel could have proceeded to sea within 24 hours, or in fact at any time within an hour. Counsel for the libellee did not see fit to file any bond or make any application to the court to have testimony taken for several days. That was his business and not mine. He could have had the evidence

(Continued on Page 11.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Feb. 24, 1919.
Regular weekly meeting came to order at 7 p. m., E. A. Erickson presiding. Secretary reported shipping medium with large number of members ashore.

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., Feb. 17, 1919.
No meeting; shipping slow; members scarce.

J. ETCHELLS, Agent.

Room 11, de Cosmos Block, 1424 Government Street.

Vancouver, B. C., Feb. 17, 1919.
Shipping fair; prospects good.

W. G. MILLARD, Agent.

58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, Feb. 17, 1919.
No meeting. Shipping and prospects medium.

H. L. PETTERSON, Agent.

2016 North 30th St. Tel. Main 808.

Seattle Agency, Feb. 17, 1919.
Shipping dull.

P. B. GILL, Agent.

84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, Feb. 17, 1919.
Shipping medium.

ED. ROSENBERG, Agent.

P. O. Box 280. Tel. Main 557.

Portland Agency, Feb. 17, 1919.
Shipping fair; prospects uncertain.

JACK ROSEN, Agent.

88½ Third Street. Tel. Main 6013.

San Pedro Agency, Feb. 17, 1919.
Shipping fair.

HARRY OHLSEN, Agent.

128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, Feb. 10, 1919.
Shipping poor; prospects poor.

JACK EDWARDSON, Agent.

P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Feb. 20, 1919.
The regular weekly meeting was called to order at 7 p. m., Eugene Burke in the chair. Secretary reported shipping quiet.

EUGENE STEIDLE, Secretary.

42 Market Street. Phone Kearny 5955.

Seattle Agency, Feb. 13, 1919.
Shipping improving. Prospects good.

LEONARD NORKGAUER, Agent.

Grand Trunk Dock, Room No. 203; P. O. Box 214. Phone Main 2233.

San Pedro Agency, Feb. 12, 1919.
No meeting. Shipping very slow; plenty of cooks ashore, but no waiters or galleymen.

JOE MACK, Agent.

P. O. Box 54. Phones Home 115, Sunset 66W

DIED.

Carl A. Andreassen, No. 1937, a native of Norway, age 28. Died in the wreck of the S.S. "San Gabriel," September, 1918.

Hilmuth Olsen, No. 1408, a native of Denmark, age 29. Died at sea, Feb. 18, 1919.

Assured that railroad rates on exports and imports will be adjusted within two weeks along lines that will permit successful offshore steamship operation out of San Francisco, the Maritime Navigation Company of New York has established an office at San Francisco, and is preparing to place a big fleet of steamships in operation between this port and the Far East, Australia and South America. The announcement was made by A. C. Worthington, vice president and general manager of the concern, who has come to San Francisco to assure the Pacific Coast that his firm believes this is the time to get ready for a flood of business on the Pacific. Worthington made this statement when it was rumored that the Dollar Steamship Company and other concerns planned to shift their fleets to New York unless the Railroad Administration adjusted rates within another month. The Maritime Navigation Company proposes to inaugurate a fleet of some twenty ships out of this port. The ships and the concern are 100 per cent. American, and that fact will be announced in all corners of the country by publicity on a scale never before attempted in the steamship business.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

After shivering with fright for nearly a week, because of the general sympathetic strike in Seattle, our official labor suppressors in Congress have gone back to other topics. There is the so-called investigation of Bolshevik propaganda in the United States, for example, in which the only people who have taken part in the propaganda, and who are begging the Senators to let them testify, are barred! There is the question of the future wage scale in industry, upon which Senator King of Utah made the assertion to-day that it was "going to steadily decrease." And then there is the question of unemployment—with Congress doing nothing at all about a remedy.

Senator Kenyon, who has tried desperately to get Congress interested in the unemployment situation, told me to-day that no action could be secured between now and March 4th. He is hopeful that the President will summon the Republican Congress in special session, at an early date, and then he is going to make the fight all over again.
